

What Happens After Rejection

Understand what happens when items are rejected and how to proceed

Overview

When an item is rejected, it enters a final state with specific consequences. Understanding what happens after rejection helps you know what to expect, why you can't edit rejected items, and how to proceed when your submissions are rejected. Rejection is a final decision that stops the workflow for that item, and understanding the consequences helps you respond appropriately and move forward effectively.

Possible Outcomes

When your submission is rejected, the item enters a final state and cannot proceed further in the workflow. The rejection outcome is final—you cannot edit rejected items, you cannot resubmit the same rejected item, and you must create a new item if you want to try again. Understanding these outcomes helps you know what to expect and how to proceed after rejection.

What Each Outcome Means

Rejected Status means the item has been formally rejected and enters a final state. The workflow stops for this item—it cannot proceed further, no further action is possible on the rejected item itself, rejected items become read-only and cannot be modified, you cannot resubmit the same rejected item, and you must create a new item to try again. Rejection decisions are final—there's no appeal process, and you cannot change the status of rejected items. This final state ensures that rejected items remain as records but cannot proceed in the workflow.

What You Cannot Do After Rejection - You cannot edit the rejected item (rejected items are locked and cannot be edited), you cannot resubmit the same item (the rejected item cannot be resubmitted—it's final), there's no appeal process (rejection decisions are final), you cannot change the status of rejected items, and the rejected item cannot proceed in the workflow. Understanding these limitations helps you know what's not possible and why.

What You Can Do After Rejection - You can still view rejected items to review them, you can see the rejection reason to understand why it was rejected, you can create a new item addressing the rejection reasons, you can learn from rejection feedback to improve future submissions, and you can try again by creating new submissions incorporating lessons learned. Understanding what you can do helps you move forward effectively.

Rejection Reasons - Rejection reasons are provided to help you understand why items were rejected. These reasons explain what issues were identified, what requirements weren't met, or what concerns led to rejection. Understanding rejection reasons helps you address issues in new submissions and improve your approach.

Next Steps for Users

After Term Sheet Rejection - Review the rejection reason carefully to understand why the term sheet was rejected. No master commitment is created, so the facility does not proceed. Create a new term sheet that addresses all rejection reasons. Ensure the new term sheet complies with requirements and has all necessary information. Submit the new term sheet and go through the review process again. Learn from the rejection to improve your proposal.

After Funding Request Rejection - Review the rejection reason carefully to understand why the funding request was rejected. No funding notice is created, so the drawdown does not proceed. Create a new funding request that addresses all rejection reasons. Ensure the new request complies with facility rules, has sufficient borrowing capacity, and includes all required documentation. Submit the new request and go through the review process again. Address all issues identified in the rejection.

After Pool Mandate Rejection - Review the rejection reason to understand why the mandate was rejected. The pool may return to Preview status, allowing you to submit to another market maker. Consider whether to address the rejection reasons before submitting to another market maker. Submit to another market maker if appropriate, or address issues and resubmit to the same market maker if allowed. Learn from rejection feedback to improve pool quality.

General Approach - Always review rejection reasons carefully to understand what went wrong. Learn from rejections to improve future submissions. Create new items that address all rejection reasons. Ensure new submissions comply with all requirements and have all necessary information. Be prepared to go through the review process again with new submissions. Use rejection feedback as learning opportunities to improve your approach.

Learning from Rejections - Rejections provide valuable feedback about what needs improvement. Use rejection reasons to understand requirements better. Address all issues identified in rejections when creating new items. Improve your submissions based on rejection feedback. Build on lessons learned to create better submissions in the future.

Understanding what happens after rejection helps you know what to expect, understand why you can't edit rejected items, know how to proceed when submissions are rejected, learn from rejections to improve future submissions, and work effectively within the rejection process.
