

Who Can Do What

Comprehensive guide to role permissions and what each role can do

Overview

This comprehensive reference guide explains what each role can and cannot do in the Intain Markets platform. Understanding role permissions helps you know what actions are available to you, what others can do, and why certain actions are unavailable. The platform automatically enforces these permissions, ensuring that you can only take actions appropriate for your role. This guide provides detailed information about role capabilities and limitations across all platform modules.

Roles Covered

The platform supports multiple roles with distinct permissions, each designed for specific responsibilities in structured finance transactions:

- **Issuer (Borrower)** - Creates pools and credit facility requests. They initiate transactions and manage loan portfolios.
- **Market Maker / Facility Agent** - Structures deals and facilitates transactions. They review opportunities, structure deals, and facilitate transactions between issuers and investors.
- **Investor / Lender** - Provides funding and makes investment decisions. They review opportunities, evaluate investments, and provide capital for transactions.
- **Servicer** - Manages ongoing loan administration. They handle loan servicing, payment tracking, and ongoing administration after deals are completed.
- **Paying Agent** - Handles payment distributions. They manage payment distributions and ensure funds are properly allocated to all parties.
- **Rating Agency** - Analyzes pools for rating purposes. They review pool data, analyze characteristics, and provide ratings for structured finance transactions.
- **Admin** - Manages platform administration. They manage users, configure system settings, and handle platform-level administrative tasks.

What Each Role Can Do

Issuer (Borrower)

Issuers create and manage pools, submit credit facility requests, and manage loan portfolios. They are the initiators of transactions and have primary responsibility for creating and managing pools and credit facility requests.

Pools and Loans:

- Can create pools with basic information, asset class, and transaction type
- Can map loans to pools and manage loan assignments
- Can edit pool information when status allows (Created or Preview status)
- Can share pools with other organizations for review and collaboration
- Can manage loan statuses (map, unmap, remove, reinstate)
- Can respond to feedback and make changes to pools
- Can submit pools for mandate review to market makers
- Can track pool status and workflow progression

Credit Facilities:

- Can create term sheets proposing new credit facilities with facility terms, amounts, interest rates, and repayment terms
- Can sign term sheets electronically before submission
- Can submit term sheets for facility agent review
- Can respond to change requests on term sheets by updating and resubmitting
- Can create funding requests against active facilities
- Can specify drawdown amounts, purposes, and funding dates
- Can approve token transfers for funding notices
- Can track funding request and funding notice status

Cannot Do:

- Cannot approve their own term sheets—these require facility agent approval
- Cannot create master commitments—these are automatically created when term sheets are approved
- Cannot approve their own funding requests—these require facility agent approval
- Cannot sign funding notices—facility agents sign on behalf of lenders
- Cannot configure master commitments—this is the facility agent's responsibility
- Cannot approve master commitments—this is the lender's responsibility

Market Maker / Facility Agent

Market Makers and Facility Agents help structure deals and facilitate transactions. They play a crucial role in reviewing opportunities, structuring deals, and facilitating transactions between issuers and investors.

Pools:

- Can review pools shared with them for mandate consideration
- Can accept or reject pool mandates based on evaluation
- Can request changes to pools to improve quality
- Can provide feedback on pools to help issuers improve
- Can structure deals and move pools toward completion
- Can finalize pools as deals after accepting mandates

Credit Facilities:

- Can review term sheets submitted by borrowers
- Can approve, reject, or request changes to term sheets
- Can configure master commitments after they're automatically created
- Can set up facility rules and borrowing base calculations
- Can configure lender groups and participation percentages
- Can review funding requests for compliance with facility rules
- Can verify borrowing capacity and review documentation

- Can approve, reject, or request changes to funding requests
- Can generate tokens for funding notices
- Can sign funding notices for lenders before sending to lenders

Cannot Do:

- Cannot create pools—issuers create pools
- Cannot create term sheets—borrowers create term sheets
- Cannot approve master commitments as lenders—lenders approve master commitments
- Cannot create funding requests—borrowers create funding requests
- Cannot approve token transfers—borrowers approve token transfers
- Cannot provide capital—this is the lender's role

Investor / Lender

Investors and Lenders provide funding for transactions. They review opportunities, evaluate investments, and make funding decisions based on their investment criteria and risk tolerance.

Pools:

- Can review pool previews shared with them for investment opportunities
- Can analyze investment opportunities thoroughly
- Can express interest in pools without commitment
- Can provide feedback on pools to help issuers improve
- Can download pool data (if permissions allow) for further analysis
- Can review loan characteristics and pool metrics
- Can evaluate risk-return profiles

Credit Facilities:

- Can review master commitments submitted for approval
- Can approve master commitments via electronic signature

- Can reject master commitments if they don't meet criteria
- Can review funding notices after borrower approves token transfer
- Can approve or reject individual drawdowns independently
- Can confirm fund transfers after approving drawdowns
- Can track facility activity and participation
- Can monitor facility status and borrowing capacity

Cannot Do:

- Cannot create pools—issuers create pools
- Cannot create term sheets—borrowers create term sheets
- Cannot create master commitments—these are automatically created
- Cannot create funding requests—borrowers create funding requests
- Cannot configure master commitments—facility agents do this
- Cannot generate tokens—facility agents do this
- Cannot approve term sheets—facility agents approve term sheets
- Cannot approve funding requests—facility agents approve funding requests

Servicer

Servicers manage ongoing loan administration after deals are completed. They handle loan servicing, payment tracking, and ongoing administration to ensure loans are properly managed.

Pools and Loans:

- Can view pools and loans assigned to them for servicing
- Can manage loan servicing activities
- Can update loan statuses and information
- Can track payments and loan performance
- Can handle ongoing administration tasks
- Can report on loan performance

Cannot Do:

- Cannot create pools or loans—they manage existing loans
- Cannot approve facilities or drawdowns—they focus on post-deal administration
- Cannot structure deals—they manage loans after deals are completed
- Cannot make investment decisions—they focus on loan administration

Paying Agent

Paying Agents handle payment distributions. They manage payment distributions and ensure funds are properly allocated to all parties according to deal terms.

Pools and Facilities:

- Can view pools and facilities assigned to them for payment processing
- Can manage payment distributions
- Can ensure funds are properly allocated
- Can handle payment-related tasks
- Can track payment distributions

Cannot Do:

- Cannot create pools or facilities—they handle payment distributions
- Cannot approve facilities or drawdowns—they focus on payment processing
- Cannot structure deals—they handle payments after deals are completed
- Cannot make investment decisions—they focus on payment distribution

Rating Agency

Rating Agencies analyze pools for rating purposes. They review pool data, analyze characteristics, and provide ratings for structured finance transactions.

Pools:

- Can view pools shared with them for rating analysis
- Can access pool and loan data for analysis
- Can review pool characteristics and metrics
- Can perform rating analysis
- Can download data (if permissions allow) for further analysis

Cannot Do:

- Cannot create or modify pools—they analyze existing pools
- Cannot approve facilities or drawdowns—they provide analysis only
- Cannot structure deals—they analyze pools for rating purposes
- Cannot make investment decisions—they provide ratings
- Typically have read-only access—cannot make changes or approvals

Admin

Admins have system-level access for platform administration. They manage users, configure system settings, and handle platform-level administrative tasks.

Platform Administration:

- Can manage users and organizations
- Can configure system settings
- Can access administrative functions
- Can handle platform-level tasks
- Can manage platform security

Cannot Do:

- Typically don't participate in regular business transactions
- Cannot approve business transactions—they manage platform administration
- Cannot create business items—they support platform operation

Important Access Notes

Each Role Has Specific Permissions - You can only perform actions allowed by your role. The platform enforces these restrictions automatically, ensuring that role-based permissions are consistently applied. Understanding specific permissions helps you know what you can do.

Role Determines Actions - Even if you can see an item, you may not be able to take certain actions if your role doesn't allow them. Your role controls both visibility and action availability. Understanding how role determines actions helps you know what you can do.

Specific Role Requirements - Some actions require specific roles—only facility agents can approve term sheets, only lenders can approve master commitments, etc. Understanding specific role requirements helps you know who can do what.

Automatic Enforcement - The platform automatically restricts actions based on your role. You cannot bypass role restrictions. Understanding automatic enforcement helps you appreciate how the platform ensures proper role-based access.

Role Controls Visibility and Actions - Your role controls both what you can see and what actions you can take. The platform filters information and actions based on your role. Understanding how role controls visibility and actions helps you know what you can see and do.

Multiple Roles Possible - Some users may have multiple roles but must select one role per login session. You can switch roles by logging out and logging back in with a different role. Understanding multiple roles helps you use the platform effectively when you have multiple responsibilities.

Role-Based Views - The platform shows you only relevant information based on your role, making navigation simpler. You only see items where you have a role or where items are shared with you. Understanding role-based views helps you know what you can see.

Action Buttons Are Role-Aware - Buttons are enabled or disabled based on your role and permissions, not just item status. Both role and status determine action availability. Understanding role-aware actions helps you know what actions are available.

Complete Audit Trail - All actions are recorded with role information for accountability and proper attribution. This ensures that actions are traceable to specific roles and users. Understanding audit trails helps you appreciate how the platform maintains accountability.

Collaboration Between Roles - Different roles collaborate through workflows—issuers create, market makers structure, lenders fund, servicers manage, etc. Understanding collaboration helps you work effectively with other parties.

Sequential Responsibilities - Roles have sequential responsibilities in workflows. Understanding sequential responsibilities helps you know when your actions are needed and how roles work together.

Independent Decisions - Some roles make independent decisions (like lenders approving drawdowns). Understanding independent decisions helps you know how certain decisions work.

Understanding role permissions helps you know what actions are available to you, understand what others can do, know why certain actions are unavailable, work effectively within your role's capabilities, and understand how different roles collaborate to complete transactions. This understanding enables effective collaboration and ensures that transactions progress correctly through proper role-based workflows.
