# What is Intain Markets

Learn about the Intain Markets platform and its capabilities for structured finance transactions

## Overview

Intain Markets is a comprehensive digital infrastructure platform designed to bring transparency, efficiency, and security to structured finance transactions. It serves as a unified ecosystem where all parties involved in financial deals—from issuers and borrowers to investors and lenders, market makers and facility agents to servicers and rating agencies—can collaborate seamlessly through secure, workflow-driven processes. The platform handles the complexity of coordinating multiple parties, managing status transitions, tracking approvals, and maintaining relationships, allowing you to focus on your business decisions rather than the mechanics of transaction management.

## How the Platform Is Designed

Intain Markets is built on the fundamental principle that structured finance transactions require careful coordination between multiple parties, each with distinct roles and responsibilities. The platform recognizes that these transactions are not simple one-time exchanges, but complex workflows that progress through defined stages, require approvals at critical points, and must maintain complete transparency throughout their lifecycle.

The platform is architected as a collaborative environment where:

**Workflows Guide Progression** - Every transaction type follows a structured path from creation to completion, with clear stages and decision points. Whether you're creating pools for securitization, submitting term sheets for credit facilities, or managing loan portfolios, the platform guides you through the appropriate sequence of steps, ensuring that important stages aren't skipped and prerequisites are met before proceeding.

**Statuses Reflect Position** - Each item in the platform has a status that indicates where it is in its journey and what can happen next. Statuses are not just labels—they actively control what actions are available, ensure proper progression, and prevent skipping important steps. Understanding statuses helps you know what to expect and what you can do at each stage.

**Approvals Ensure Quality** - Critical stages require review and approval from authorized parties before proceeding. Approvals are not obstacles but quality checkpoints that ensure items meet standards, comply with requirements, and have proper authorization before commitment. This protects all parties involved and maintains quality throughout the process.

**Roles Define Capabilities** - Each user's role determines what they can see, what actions they can take, and what responsibilities they have. The platform automatically filters information and actions based on your role, showing you only what's relevant and appropriate for your responsibilities. This role-based approach ensures proper separation of duties and maintains workflow integrity.

**Sharing Enables Collaboration** - Items can be shared with multiple parties simultaneously, allowing parallel review and input. Issuers can share pools with market makers and investors, borrowers can submit term sheets to facility agents, and multiple parties can collaborate on transactions without conflicts. This sharing capability enables efficient multi-party collaboration.

**Traceability Provides Accountability** - Every action, status change, and decision is recorded with who did what and when. This complete traceability ensures accountability, supports compliance, and provides transparency for all parties. You can see the complete history of any item, understand how it progressed, and identify who was responsible for specific actions or decisions.

The platform handles the complexity of coordinating these elements automatically, ensuring that workflows progress correctly, approvals happen in the right order, and all parties stay informed of relevant changes. This automation reduces errors, ensures consistency, and allows you to focus on your business decisions rather than managing process mechanics.

## What This Enables for Users

**For Issuers and Borrowers**, the platform enables you to organize your loan portfolios into pools, present investment opportunities to potential investors, submit credit facility requests, and manage transactions from initial creation through final completion—all while maintaining control over your data and visibility into the process. You can track where your submissions are in the workflow, respond to feedback, make changes when requested, and see when approvals occur. The platform ensures your submissions are reviewed by qualified parties and protects you by requiring approvals before commitment.

**For Market Makers and Facility Agents**, the platform provides tools to review opportunities, accept mandates to structure deals, provide feedback and request changes, review and approve submissions, and facilitate transactions—helping you add value through structuring and coordination. You can see pools and term sheets submitted for your review, make informed decisions about mandates and approvals, request improvements when needed, and track transactions through to completion. The platform gives you clear decision points and ensures you review items at the appropriate stage.

**For Investors and Lenders**, the platform offers visibility into investment opportunities, the ability to review pool characteristics and loan details, tools to approve or reject funding requests, and tracking of your investments—enabling informed decision-making and efficient capital deployment. You can evaluate opportunities thoroughly, make independent decisions about participation, track your investments, and see complete information about opportunities you're considering. The platform ensures you have the information you need to make informed decisions.

**For Servicers and Paying Agents**, the platform supports ongoing administration by providing access to assigned pools and facilities, tools to manage loan servicing and payment distributions, and tracking of ongoing activities—ensuring smooth post-deal operations. You can manage loan portfolios, track payments, update loan statuses, handle payment distributions, and ensure proper ongoing administration. The platform provides the tools you need for effective post-deal management.

**For Rating Agencies**, the platform provides read-only access to pool information for analysis and rating purposes, enabling thorough evaluation while maintaining appropriate access controls. You can access pool data, analyze characteristics, review loan details, and perform rating analysis while maintaining appropriate security and access controls.

**Across All Roles**, the platform enables collaboration without confusion, maintains security through role-based access, ensures compliance through structured workflows, and provides complete transparency through comprehensive audit trails. Everyone benefits from the structured approach, quality assurance, compliance support, and transparency that the platform provides.

## Key Principles to Understand

**Workflow-Driven Design** - The platform is built around workflows, not just features. Every action fits into a larger process, and the system guides you through the appropriate sequence of steps. Understanding workflows helps you know what needs to happen next and how your actions fit into the overall transaction process.

**Status-Based Control** - Statuses are not just labels—they control what actions are available, ensure proper progression, and prevent skipping important steps. Understanding statuses helps you know what to expect and what you can do at each stage. When actions are disabled, it's usually because the status doesn't allow them yet, or prerequisites haven't been met.

**Approval Gates** - Approvals are not obstacles but quality checkpoints. They ensure that items meet standards, comply with requirements, and have proper authorization before proceeding—protecting all parties involved. Understanding approvals helps you appreciate their value in ensuring quality and maintaining compliance.

**Role-Based Access** - Your role determines your view and capabilities. The platform automatically filters information and actions based on your role, showing you only what's relevant and appropriate for your responsibilities. Understanding your role helps you know what you can see and do, and what others can see and do.

**Collaborative by Design** - The platform is built for multi-party collaboration. Sharing, feedback, and parallel review are core capabilities, not add-ons. Multiple parties can work together efficiently without conflicts. Understanding collaboration helps you work effectively with other parties.

**Complete Traceability** - Every action is tracked, every status change is recorded, and every decision is documented. This traceability ensures accountability, supports compliance, and provides transparency for all parties. Understanding traceability helps you appreciate how the platform maintains accountability and supports compliance.

**Automatic Coordination** - The platform handles the complexity of coordinating multiple parties, managing status transitions, tracking approvals, and maintaining relationships—you focus on your business decisions, not the mechanics. Understanding this automation helps you appreciate how the platform simplifies complex processes.

**Security and Compliance** - Security is built into every aspect, from authentication and role-based permissions to digital signatures and audit trails. The platform ensures that transactions are protected and compliant. Understanding security and compliance helps you trust that your data and transactions are secure.

Understanding these principles helps you appreciate how Intain Markets brings structure, security, and efficiency to complex multi-party transactions while maintaining the flexibility and transparency needed for successful structured finance deals. These principles work together to create a platform that supports effective collaboration, ensures quality and compliance, and provides the transparency and accountability needed for structured finance transactions.

# User Roles and Responsibilities

Understand different user roles and what each role can do in the platform

## Overview

Intain Markets uses distinct user roles, each with specific responsibilities and access permissions. Your role determines what actions you can take, what information you can see, and what you're responsible for in the structured finance workflow. The platform automatically filters information and actions based on your role, showing you only what's relevant and making it easier to focus on your responsibilities. Understanding roles helps you know what you can do, what others can do, and how different parties collaborate to complete structured finance transactions.

## Roles Covered

The platform supports several distinct roles, each designed for specific responsibilities in structured finance transactions:

- **Issuer (Borrower)** - Organizations that own loans and create pools or credit facility requests. They initiate transactions and manage loan portfolios.
- **Market Maker (Facility Agent)** - Organizations that structure deals and facilitate transactions. They review opportunities, structure deals, and facilitate transactions between issuers and investors.
- **Investor (Lender)** - Organizations that provide funding and make investment decisions. They review opportunities, evaluate investments, and provide capital for transactions.
- **Servicer** - Organizations that manage ongoing loan administration. They handle loan servicing, payment tracking, and ongoing administration after deals are completed.
- **Paying Agent** - Organizations that handle payment distributions. They manage payment distributions and ensure funds are properly allocated to all parties.

- **Rating Agency** - Organizations that analyze pools for rating purposes. They review pool data, analyze characteristics, and provide ratings for structured finance transactions.
- **Admin** - System administrators with platform-level access. They manage users, configure system settings, and handle platform-level administrative tasks.

## What Each Role Can Do

### Issuer (Borrower)

Issuers create and manage pools, submit credit facility requests, and manage loan portfolios. They are the initiators of transactions and have primary responsibility for creating and managing pools and credit facility requests.

#### Primary Capabilities:

- Create pools and assign loans to them
- Share pools with market makers, investors, and other parties
- Submit term sheets for credit facilities
- Create funding requests against active facilities
- Manage loan data and pool information
- Respond to feedback and make changes
- View their pools and track status changes
- Approve token transfers for funding notices

#### Limitations:

- Cannot approve their own submissions—they must wait for other parties to review and approve
- Cannot create master commitments—these are automatically created when term sheets are approved
- Cannot approve funding requests—these require facility agent approval

#### Responsibilities:

- Ensure pool data is accurate and complete
- Respond to feedback and change requests promptly
- Maintain loan data quality
- Track pool and facility status
- Coordinate with market makers and facility agents

## **Market Maker (Facility Agent)**

Market Makers help structure deals and facilitate transactions. They play a crucial role in reviewing opportunities, structuring deals, and facilitating transactions between issuers and investors.

### **Primary Capabilities:**

- Review pools shared with them
- Accept or reject mandates to structure deals
- Provide feedback and request changes on pools
- Review and approve term sheets
- Configure master commitments after they're auto-created
- Review and approve funding requests
- Sign funding notices for lenders
- Structure deals and move pools toward completion
- View pools and facilities they're involved with

### **Limitations:**

- Cannot create pools or term sheets themselves—they review and structure items created by issuers
- Cannot approve master commitments—these require lender approval
- Cannot approve their own reviews—approval decisions are tracked separately

### **Responsibilities:**

- Review opportunities thoroughly

- Provide constructive feedback
- Structure deals effectively
- Ensure compliance with requirements
- Facilitate transactions efficiently

## **Investor (Lender)**

Investors provide funding for transactions. They review opportunities, evaluate investments, and make funding decisions based on their investment criteria and risk tolerance.

### **Primary Capabilities:**

- Review pools and investment opportunities shared with them
- Review and approve credit facilities and master commitments
- Approve or reject funding requests and funding notices
- Review master commitments and facility setups
- Confirm fund transfers
- View their investments and track status
- Express interest in opportunities
- Analyze pool characteristics and loan details

### **Limitations:**

- Cannot create pools or term sheets—they review and approve items created by issuers
- Cannot approve term sheets—these require facility agent approval
- Cannot approve funding requests—these require facility agent approval first

### **Responsibilities:**

- Evaluate opportunities thoroughly
- Make informed investment decisions
- Review facility structures carefully

- Track investments and commitments
- Confirm fund transfers promptly

## **Servicer**

Servicers manage ongoing loan administration after deals are completed. They handle loan servicing, payment tracking, and ongoing administration to ensure loans are properly managed.

### **Primary Capabilities:**

- View pools and loans assigned to them
- Manage loan servicing activities
- Track payments and loan performance
- Update loan statuses and information
- Handle ongoing administration tasks

### **Limitations:**

- Cannot create or approve pools—they manage loans after deals are completed
- Cannot approve transactions—they focus on post-deal administration
- Cannot modify deal structures—they work within established deal parameters

### **Responsibilities:**

- Maintain accurate loan records
- Track payments and performance
- Update loan statuses promptly
- Ensure proper loan administration
- Report on loan performance

## **Paying Agent**

Paying Agents handle payment distributions. They manage payment distributions and ensure funds are properly allocated to all parties according to deal terms.

**Primary Capabilities:**

- View pools and facilities assigned to them
- Manage payment distributions
- Ensure funds are properly allocated
- Handle payment-related tasks

**Limitations:**

- Cannot create or approve pools—they handle payment distributions
- Cannot approve transactions—they focus on payment processing
- Cannot modify deal structures—they work within established deal parameters

**Responsibilities:**

- Ensure accurate payment distributions
- Allocate funds correctly
- Process payments promptly
- Maintain payment records
- Report on payment activities

**Rating Agency**

Rating Agencies analyze pools for rating purposes. They review pool data, analyze characteristics, and provide ratings for structured finance transactions.

**Primary Capabilities:**

- View pools shared with them
- Access pool and loan data for analysis
- Review pool characteristics and metrics

- Perform rating analysis
- Download data (if permissions allow)

**Limitations:**

- Have read-only access—cannot make changes or approvals
- Cannot create or modify pools—they analyze existing pools
- Cannot approve transactions—they provide analysis only

**Responsibilities:**

- Analyze pools thoroughly
- Provide accurate ratings
- Maintain analysis standards
- Ensure rating quality
- Report on rating analysis

**Admin**

Admins have system-level access for platform administration. They manage users, configure system settings, and handle platform-level administrative tasks.

**Primary Capabilities:**

- Manage users and organizations
- Configure system settings
- Access administrative functions
- Handle platform-level tasks

**Limitations:**

- Typically don't participate in regular business transactions
- Cannot approve business transactions—they manage platform administration
- Cannot create business items—they support platform operation

## Responsibilities:

- Maintain platform security
- Configure system settings
- Manage users and organizations
- Support platform operation
- Ensure platform availability

## Important Access Notes

**Role Selection** - You must select the correct role during login that matches your account. If you have multiple roles, you can log in with different roles at different times, but you can only use one role per session. The role you select determines what you can see and do.

**Role-Based Views** - Your role determines your view—you only see items where you have a role or where items are shared with you. The platform automatically filters information based on your role, showing you only what's relevant to your responsibilities.

**Action Availability** - Action buttons are enabled or disabled based on your role and the item's status. Disabled buttons usually show a reason why the action isn't available. Understanding role-based action availability helps you know what you can do and why certain actions might not be available.

**Multiple Roles** - Some users may have multiple roles (for example, an organization might be both an issuer and an investor), but you can only use one role per session. You can switch roles by logging out and logging back in with a different role.

**Role-Based Permissions** - Role-based permissions ensure proper workflow—issuers cannot approve their own submissions, and each role has appropriate responsibilities. This separation of duties ensures proper workflow and maintains security.

**Automatic Enforcement** - The platform enforces role-based rules automatically, so you can only take actions that are appropriate for your role. This automatic enforcement ensures that role-based rules are consistently applied.

**Collaboration Between Roles** - Collaboration between roles is essential—issuers create, market makers structure, investors fund, and servicers manage ongoing administration. Understanding how roles collaborate helps you work effectively with other parties.

**Role Attribution** - All actions are recorded with role information, ensuring accountability and proper attribution. This role attribution ensures that actions are traceable to specific roles and users.

Understanding your role and the roles of others helps you navigate the platform effectively, know what actions you can take, understand what others can do, and understand how different parties collaborate to complete structured finance transactions. This understanding enables effective collaboration and ensures that transactions progress correctly through proper role-based workflows.

# Login and Navigation

Learn how to log in and navigate the platform effectively

## Overview

Logging into Intain Markets and navigating the platform is designed to be straightforward and role-focused. The platform automatically presents you with relevant information and appropriate actions based on your role, making it easy to find what you need and focus on your responsibilities. Understanding login and navigation helps you access the platform efficiently, find information quickly, and work effectively within your role's capabilities.

## How to Navigate the Platform

**Login Process** - When you access the platform, you'll see a login page where you enter your credentials (username and password). After authentication, you'll select your role from a dropdown menu if you have multiple roles. The platform then presents you with a dashboard tailored to your selected role, showing items relevant to your responsibilities and pending actions requiring your attention.

**Role Selection** - If your account has multiple roles (for example, you might be both an issuer and an investor), you'll select which role you want to use for this session. You can only use one role per session, but you can log out and log back in with a different role if needed. The role you select determines what you can see and do throughout your session.

**Dashboard Access** - After logging in, you'll see a dashboard that shows items relevant to your role—pools you've created or are involved with, pending actions requiring your attention, recent activity, and items in various statuses. The dashboard is automatically filtered to show only what's relevant to your role, making it easy to see what needs your attention.

**Main Navigation** - The platform provides navigation menus that organize features by function—Pools, Loans, Credit Facilities, Documents, and other sections. These menus are available throughout the platform, allowing you to move between different areas easily. The navigation is consistent across the platform, making it easy to find what you need.

**Item Lists** - When you navigate to a section (like Pools or Credit Facilities), you'll see lists of items relevant to your role. The platform automatically filters these lists to show only items where you have a role or where items are shared with you. This automatic filtering ensures you only see relevant items.

**Item Details** - Clicking on an item takes you to its detail page, where you can see all information, available actions, status, history, and related items. Action buttons are automatically enabled or disabled based on your role and the item's status. This detail view provides complete information about items and shows what actions are available.

**Search and Filter** - The platform provides search and filter capabilities to help you find specific items. You can search by name, filter by status, or use other criteria to locate items quickly. These tools help you find items efficiently, especially when dealing with large numbers of items.

## What You Will See

**Login Page** - When you access the platform, you'll see the login page where you enter your credentials to access your account.

The image shows the Intain Markets login page. On the left, the Intain Markets logo is at the top. Below it, the heading "Sign In to Platform" is centered. The login form includes three fields: "Email Address" with a placeholder "Enter your username", "Password" with a placeholder "Enter your password" and a "Forgot Password?" link, and a "Role" dropdown menu with "Select Role" and a downward arrow. A yellow "Sign In" button is below the form. At the bottom left, there is a link "Sign Up, if you don't have an account" and a button "Login as a Partner". On the right, a dark teal banner features a network diagram of people icons and the text "Future of Structured Finance" followed by "Integrated and Automated for Transaction Efficiency and Asset Transparency".

Dashboard Notification Panel

**Filtered Lists** - When you navigate to sections like Pools or Credit Facilities, you'll see lists automatically filtered for your role. You won't see items where you don't have a role or that aren't shared with you. This filtering happens automatically—you don't need to manually filter. This automatic filtering ensures you only see relevant items.

**Role-Appropriate Actions** - Action buttons throughout the platform are automatically enabled or disabled based on your role and the item's status. You'll only see actions you can actually take. Disabled buttons typically show tooltips explaining why they're disabled. This role-based action availability ensures you can only take actions that are appropriate for your role.

**Status Indicators** - Items display status badges or labels that show where they are in their workflow. Statuses are often color-coded—green for completed or approved, yellow for pending or under review, red for rejected or blocked. These indicators help you quickly understand where items stand and what actions might be available.

**Notifications** - The platform may show notifications about items requiring your attention, status changes, approvals needed, or other important updates. These notifications help you stay informed about relevant activities and ensure you don't miss important updates or actions that require your attention.

**Search and Filter Options** - The platform provides search and filter capabilities to help you find specific items. You can search by name, filter by status, or use other criteria to locate items quickly. These tools help you find items efficiently, especially when dealing with large numbers of items.

**Breadcrumbs and Navigation Paths** - The platform provides breadcrumbs and clear navigation paths to help you understand where you are and how to navigate back. These navigation aids help you move through the platform efficiently and understand your location within the platform structure.

## Helpful Tips

**Select the Correct Role** - Make sure you select the role that matches what you want to do. If you're creating pools, use the Issuer role. If you're reviewing opportunities, use the Investor role. The role you select determines what you can see and do throughout your session.

**Check Your Dashboard First** - Your dashboard shows items requiring your attention and recent activity. Check it regularly to stay on top of pending actions and important updates. The dashboard provides a quick overview of what needs your attention.

**Understand Status Indicators** - Status badges help you quickly see where items are in their workflow. Learn what different statuses mean so you can understand what actions are available and what needs to happen next. Understanding statuses helps you navigate the platform effectively.

**Use Navigation Menus** - The main navigation menus organize features logically. Use them to move between different sections of the platform efficiently. The navigation is consistent across the platform, making it easy to find what you need.

**Look for Tooltips** - When actions are disabled, hover over buttons or check tooltips to see why they're disabled. This helps you understand what needs to happen to enable actions. Tooltips provide helpful information about why actions might not be available.

**Check Notifications** - Notifications alert you to important updates, pending actions, or items requiring your attention. Check them regularly to stay informed. Notifications help you stay on top of important activities and ensure you don't miss actions that require your attention.

**Use Search When Needed** - If you're looking for a specific item, use the search functionality rather than scrolling through long lists. Search helps you find items quickly, especially when dealing with large numbers of items.

**Understand Role-Based Views** - Remember that you only see items relevant to your role. If you can't find something, it might not be shared with you or you might need to use a different role. Understanding role-based views helps you know what you can see and why.

**Multiple Roles** - If you have multiple roles, you can switch between them by logging out and logging back in with a different role. Each role shows you a different view of the platform. Understanding multiple roles helps you use the platform effectively when you have multiple responsibilities.

**Action Availability** - Action buttons are enabled or disabled based on both your role and the item's status. If an action isn't available, check both your role permissions and the item's status to understand why. Understanding action availability helps you know what you can do and why certain actions might not be available.

**Use Filters Effectively** - When viewing lists, use filters to narrow down items by status, date, or other criteria. This helps you find specific items quickly and focus on what's relevant. Effective use of filters helps you navigate large lists efficiently.

Understanding login and navigation helps you access the platform efficiently, find what you need quickly, understand what actions are available, and work effectively within your role's capabilities. This understanding enables you to use the platform effectively and efficiently, focusing on your responsibilities and finding the information you need quickly.

# Status and Approval Philosophy

Understand how statuses and approvals work together to create structured workflows

## Overview

Statuses and approvals are fundamental design elements of Intain Markets that work together to create structured workflows where items progress through defined stages, quality is ensured through review checkpoints, and proper authorization is obtained before commitment. Understanding this philosophy helps you appreciate why the platform works the way it does, how statuses and approvals interact, and how to work effectively within the structured workflow system.

## How the Platform Is Designed

The platform is designed around the principle that structured finance transactions must progress through logical stages, with quality checks and authorization gates at critical points. Statuses serve as markers that indicate where an item is in its journey, while approvals serve as gates that ensure quality and compliance before items can proceed to the next stage.

**Statuses as Active Controls** - Statuses are not arbitrary labels—they are active controls that:

- **Define what actions are available** - Only actions appropriate for the current stage are enabled. When you see a disabled button, it's usually because the status doesn't allow that action yet, or prerequisites haven't been met. This prevents errors and ensures proper workflow progression.
- **Prevent improper progression** - You cannot skip stages or go backwards without proper authorization. The platform enforces sequential progression, ensuring that important steps aren't missed and that items progress in the correct order.

- **Reflect business state** - Statuses represent real business conditions, not just technical states. A pool in "Preview" status is actually being shared for review, a term sheet in "FAReview" status is actually being reviewed by a facility agent, and a funding request in "APPROVED" status has actually been approved and is ready for the next stage.
- **Enable parallel workflows** - Different parties can work on different aspects while respecting status boundaries. An issuer can work on pool details while a market maker reviews the pool, but certain actions are only available when the status allows them.
- **Provide visibility** - Statuses communicate to all parties where items are in the process. Everyone can see the current status and understand what stage the item is at, what has happened, and what needs to happen next.

**Approvals as Quality Assurance** - Approvals are not obstacles—they are quality assurance mechanisms that:

- **Ensure standards are met** - Items are reviewed by qualified parties before proceeding. Reviewers examine items to ensure they meet quality requirements, identify issues early, and provide opportunities for improvement before final commitment.
- **Maintain compliance** - Regulatory requirements and business rule requirements are verified before commitment. Reviewers assess compliance, ensuring that transactions meet all necessary requirements before proceeding.
- **Protect all parties** - Approvals ensure all parties agree before commitment. Submitters know their items are reviewed, reviewers can ensure quality, and all parties benefit from structured review processes that protect everyone involved.
- **Enable improvement** - Reviewers can request changes before final approval, allowing iterative improvement. This enables refinement and ensures that items meet requirements before final commitment, rather than requiring rejection and restart.
- **Create accountability** - Approval decisions are documented and attributed to specific reviewers. This creates accountability and supports compliance requirements, ensuring that decisions are traceable and attributable.

The platform enforces this structure automatically, ensuring that workflows progress correctly and approvals happen in the proper sequence. This automatic enforcement reduces errors, ensures consistency, and maintains workflow integrity throughout the transaction lifecycle.

## What This Enables for Users

**For Submitters** (issuers, borrowers), this structure provides clarity about what needs to happen next, ensures your submissions are reviewed by qualified parties, and protects you by requiring approvals before commitment. You can see where your items are in the process, understand what's required to move forward, and be confident that approved items have met quality and compliance standards. The structure also provides opportunities for feedback and improvement before final commitment.

**For Reviewers** (facility agents, market makers, lenders), this structure provides clear decision points, ensures you review items at the right stage, and gives you tools to request improvements before approval. You can see what needs your attention, make informed decisions, and ensure quality and compliance through structured review processes. The structure also ensures that you review items at the appropriate stage, when all necessary information is available.

**For All Parties**, this structure provides transparency into process progression, ensures quality through review, maintains compliance through structured workflows, and creates accountability through documented decisions. Everyone can see where things stand, what needs to happen next, and who is responsible for specific actions or decisions. This transparency builds trust and enables effective collaboration.

The status and approval structure enables efficient collaboration while maintaining quality, compliance, and proper authorization throughout the transaction lifecycle. This structure protects all parties while ensuring that transactions progress efficiently and correctly.

## Key Principles to Understand

**Statuses Control Actions** - Statuses are not just informational—they actively control what you can do. When an action is disabled, it's usually because the status doesn't allow it yet, or prerequisites haven't been met. Understanding statuses helps you know what's possible at each stage and why certain actions might not be available.

**Approvals Are Quality Gates** - Approvals are checkpoints, not obstacles. They ensure that items meet standards, comply with requirements, and have proper authorization before proceeding. This protects all parties and maintains quality throughout the process. Understanding approvals helps you appreciate their value in ensuring quality and maintaining compliance.

**Sequential Progression** - Workflows progress sequentially through stages. You cannot skip steps or go backwards without proper authorization. This ensures that important steps aren't missed and that items progress in the correct order. Understanding sequential progression helps you know what needs to happen and in what order.

**Role-Based Approval Authority** - Different roles have authority to approve different items at different stages. Only facility agents can approve term sheets, only lenders can approve funding requests, etc. This ensures proper authorization and maintains workflow integrity. Understanding role-based authority helps you know who can approve what and when.

**Rejection vs. Change Requests** - Reviewers can reject items (stopping the workflow) or request changes (allowing improvement and resubmission). Understanding this distinction helps you know whether you need to start fresh or can make changes and continue. Change requests enable iterative improvement, while rejections require starting over.

**Status Changes Are Permanent** - Status changes are recorded and cannot be easily undone. This creates accountability and maintains audit trails. Make sure items are ready before moving to the next status. Understanding permanence helps you appreciate the importance of careful progression.

**Complete History** - All status changes and approvals are recorded with who made the change, when it happened, and what changed. This creates complete audit trails for compliance and accountability. Understanding history helps you appreciate how the platform maintains accountability and supports compliance.

**Status Visibility** - Statuses are visible to all relevant parties, providing transparency into process progression. Everyone can see where items are and what stage they're at. Understanding visibility helps you know how statuses communicate information to all parties.

**Approval Decisions Are Documented** - All approval decisions are recorded with who approved, when, and any comments or reasons. This creates accountability and supports compliance requirements. Understanding documentation helps you appreciate how the platform maintains accountability.

**Automatic Enforcement** - The platform enforces status and approval rules automatically. You don't need to remember to follow rules—the platform ensures proper operation automatically. Understanding automatic enforcement helps you appreciate how the platform simplifies compliance and ensures consistency.

Understanding this philosophy helps you work effectively within the platform's structure, appreciate why certain actions are available or disabled, and understand how statuses and approvals work together to ensure quality, compliance, and proper workflow progression. This understanding enables you to navigate the platform effectively and work efficiently within the structured workflow system.

# Pools Overview

Learn what pools are and how they work in structured finance transactions

## Overview

Pools are collections of loans grouped together for securitization, whole loan sales, or other structured finance transactions. They serve as the fundamental building blocks for presenting loan portfolios to investors, structuring deals, and managing transactions from creation through completion. Understanding pools helps you effectively organize loans and navigate the structured finance workflow.

## What Pools Are

A pool is essentially a container that holds multiple individual loans, organizing them into a single transaction unit. When you create a pool, you're grouping related loans together to present them as a cohesive investment opportunity or transaction package. Pools make it easier to manage, analyze, and present multiple loans as a unified whole rather than dealing with each loan individually.

Pools are dynamic entities—you can add loans to them, remove loans from them, and share them with other parties for review and collaboration. The platform automatically calculates aggregate metrics from all the loans in a pool, such as total balance, loan count, weighted average interest rates, and other characteristics that help investors and market makers understand the pool's composition and quality.

## Purpose and Use Cases

Pools serve several important purposes in structured finance:

**For Securitization Transactions** - Pools organize loans that will be packaged into securities and sold to investors. The pool structure helps investors understand the underlying assets and assess risk and return.

**For Whole Loan Sales** - Pools present loans as investment opportunities to potential buyers. Buyers can review pool characteristics and loan details to make purchase decisions.

**For Transaction Management** - Pools provide a structured way to manage the entire transaction process from initial creation through deal completion, tracking progress and coordinating with multiple parties.

**For Collaboration** - Pools enable collaboration between issuers, market makers, investors, and other parties. You can share pools for review, receive feedback, and work together to structure deals.

**For Analysis** - Pools aggregate loan data into meaningful metrics that help all parties understand pool characteristics, assess quality, and make informed decisions.

## Key Components

**Pool Information** - Basic details about the pool including pool name, asset class, transaction type, description, and closing deal indicator. The pool name must be unique and helps identify the pool throughout the transaction.

**Mapped Loans** - Individual loans that have been assigned to the pool. Loans can only belong to one pool at a time. When loans are mapped, they contribute their balance, characteristics, and data to pool-level metrics.

**Pool Metrics** - Aggregate statistics calculated automatically from mapped loans, including total balance, loan count, weighted average coupon, weighted average FICO scores, geographic distribution, and other characteristics. These metrics update automatically when loans are added or removed.

**Organization Assignments** - Organizations assigned to participate in the transaction, such as market makers for structuring, investors for funding, servicers for loan administration, paying agents for payment distributions, and rating agencies for analysis.

**Status** - The current stage of the pool in its workflow, such as Created, Preview, Mandate Pending, or Deal. Status determines what actions are available and what needs to happen next.

**Sharing Configuration** - Settings that control which organizations can see the pool and what they can do with it, such as viewing, providing feedback, downloading data, or requesting changes.

## How Pools Work

**Creation** - You create a pool by providing basic information like pool name, asset class, and transaction type. The pool starts in Created status, visible only to you, ready for loan mapping and configuration.

The screenshot shows the 'Set-up Pool' modal in the Intain Markets dashboard. The modal is open, displaying various fields for creating a new pool. The background dashboard shows a table of existing pools.

**Set-up Pool Modal Fields:**

- Pool Name\* (Text input)
- Asset Class\* (Dropdown menu)
- Transaction Type (Dropdown menu)
- Market Maker Organization (Dropdown menu)
- Investor Organization (Dropdown menu)
- Paying Agent Organization (Dropdown menu)
- Servicer Organization (Dropdown menu)
- Rating Agency Organization (Dropdown menu)
- Description (Text input)

**Background Dashboard Table:**

| Pool ID     | Transaction Type | Pool Name | Current Principal Balance | Status       | Actions |
|-------------|------------------|-----------|---------------------------|--------------|---------|
| DEBR2527569 | Credit Facility  | Demo Pool | 0,892,273.58              | Under Review | [Icon]  |

Pool Creation - Issuer

**Loan Mapping** - You map loans to the pool by selecting individual loans and assigning them to the pool. When loans are mapped, pool metrics calculate automatically. You can add or remove loans while the pool is in Created or Preview status.

Loan Map to Pool - Issuer

**Sharing** - You share pools with other organizations for review and collaboration. When shared, pools become visible to those organizations, and recipients can view, analyze, and provide feedback based on sharing permissions.

Pool Sharing - Issuer

**Pool Details** - When viewing pools, you can access detailed information including pool metrics, loan composition, and available actions. The pool details view provides comprehensive information for decision-making.

**Mapped Loans**

[Summary](#) [Loans](#) [Loan Tape](#) [Strats](#) [Performance](#) [Feedback](#) [Sharing](#)

Pool Details - Issuer

**Status Progression** - Pools progress through statuses from Created to Preview to Mandate Pending to Deal. Each status represents a specific stage and determines what actions are available. Status changes happen when you take actions like sharing, submitting for mandate, or when market makers accept mandates.

**Collaboration** - Multiple parties can work together on pools. Issuers create and share, market makers review and structure, investors evaluate opportunities, and rating agencies analyze for ratings. Feedback and change requests enable iterative improvement.

**Finalization** - When market makers accept mandates, pools become Deals, representing finalized and committed transactions. At this stage, editing is restricted, and the pool is ready for execution.

## Important Points to Know

**Automatic Metric Calculation** - Pool metrics calculate automatically from mapped loans. You don't need to calculate them manually—total balance, loan count, weighted averages, and other statistics update automatically when loans are added or removed.

**One Pool Per Loan** - Loans can only belong to one pool at a time. If you want to move a loan to a different pool, you must unmap it from the current pool first. This ensures clear ownership and prevents conflicts.

**Status Controls Actions** - Pool status determines what actions are available. You can edit pools in Created or Preview status, but editing is restricted once pools become Deals. Understanding status helps you know what you can do.

**Removed Loans Are Excluded** - Removed loans are excluded from pool calculations but remain visible for tracking. This allows you to maintain pool quality while preserving complete records. Removed loans can be reinstated if needed.

**Sharing Enables Collaboration** - Sharing pools with other organizations enables collaboration and review. You can share with multiple parties simultaneously, and sharing permissions control what recipients can do.

**Complete Audit Trail** - All pool changes, status updates, and actions are recorded with who did what and when, ensuring complete transparency and accountability throughout the transaction lifecycle.

Understanding pools helps you effectively organize loans, present opportunities to investors, collaborate with other parties, manage transactions from creation to completion, and navigate the structured finance workflow successfully.

# Pool Lifecycle and Statuses

Understand the different stages pools go through from creation to deal completion

## Overview

Pools progress through several statuses from creation to final deal completion. Each status represents a specific stage in the pool's journey and determines what actions are available. Understanding these statuses helps you track where your pool is in the process, know what to expect at each stage, and understand what actions are available and why certain actions might not be available.

## Lifecycle Overview

Pools typically progress through a logical sequence: they start as **Created** when you first create them, move to **Preview** when shared with other parties, progress to **Mandate Pending** when submitted to a market maker, and finally reach **Deal** status when the market maker accepts the mandate and finalizes the transaction. This progression ensures that pools move through proper stages with appropriate reviews and approvals at each step.

The lifecycle is designed to support collaboration—you create and prepare pools, share them for review, submit them for structuring, and finalize them as completed deals. Each stage has specific purposes and allows different types of actions, ensuring that pools progress correctly through the structured finance workflow. Understanding this lifecycle helps you know what to expect and how to navigate the process effectively.

## Status Meanings

**Created** - The pool has been created with basic information and is visible only to you, the creator. This is the initial stage where you prepare the pool, add loans, and configure settings before sharing. Pools in Created status are private to you and allow full editing capabilities.

**Preview** - The pool has been shared with other organizations for review. Recipients can view and analyze the pool, and you can continue making changes based on feedback. Pools in Preview status are visible to shared parties and enable collaboration and review.

**Mandate Pending** - The pool has been submitted to a market maker for mandate review. The market maker is deciding whether to accept the mandate to structure the deal. Pools in Mandate Pending status are waiting for market maker decisions and have restricted editing capabilities.

**Deal** - The market maker has accepted the mandate, and the pool is finalized and structured. The transaction is committed, and editing is restricted. Pools in Deal status represent finalized transactions ready for execution.

## What Each Status Indicates

**Created Status** indicates that you're still preparing the pool. You can edit freely, add or remove loans, configure sharing settings, and make changes as needed. The pool is private to you until you share it. This status tells you that the pool is in its early stages and not yet ready for external review. You have full control and can work on the pool without restrictions.

**Preview Status** indicates that the pool is being reviewed by other parties. Recipients can view and analyze, provide feedback, and request changes. You can continue editing and responding to feedback. This status tells you that collaboration has begun and the pool is moving toward structuring. Multiple parties can work together while you maintain editing capabilities.

**Mandate Pending Status** indicates that a formal request has been made to a market maker to structure the deal. The market maker is evaluating whether to accept. This status tells you that the pool is at a critical decision point and you're waiting for the market maker's response. Editing is typically restricted while waiting for the decision.

**Deal Status** indicates that the transaction is finalized and committed. The pool is structured, and ongoing activities are managed separately. This status tells you that the pool has reached its final state and the deal is complete. Editing is restricted, and the pool is ready for execution and ongoing management.

Understanding pool lifecycle and statuses helps you navigate the platform effectively, know what actions are available at each stage, track your pool's progress from creation to deal completion, understand what each status means for your workflow, and work effectively within the structured finance process.

# Role-Based Pool Views

Understand how different users see pools based on their role

## Overview

Different users see pools differently based on their role. The platform automatically filters information and shows you only relevant items and appropriate actions for your role, making navigation simpler and more focused. Understanding role-based views helps you know what pools you can see, what actions are available, why some pools aren't visible to you, and how different roles interact with pools throughout the transaction lifecycle.

## How to Navigate the Platform

**Accessing Pool Lists** - When you navigate to the Pools section, the platform automatically shows you only pools relevant to your role. As an issuer, you'll see pools you've created. As a market maker, you'll see pools shared with you. As an investor, you'll see investment opportunities. This filtering happens automatically—you don't need to manually filter. The platform ensures you only see pools where you have a role or where pools are shared with you.

**Viewing Pool Details** - Clicking on a pool takes you to its detail page, where you can see all information, metrics, loan details, status, history, and available actions. The information and actions shown are automatically filtered based on your role. You'll see information relevant to your role and actions appropriate for your responsibilities.

**Understanding Visibility** - Pools are visible to you if you created them, if they're shared with your organization, or if you have an assigned role in them. If you can't see a pool, it's likely not shared with you or you don't have a role in it. Understanding visibility helps you know what pools you can see and why.

**Role Selection Matters** - The role you select during login determines what pools you can see. If you have multiple roles, you'll see different pools when you log in with different roles. Make sure you're using the correct role for what you want to do. The role you select affects what you can see and do throughout your session.

**Status Affects Visibility** - Some statuses affect visibility. For example, pools in Created status are only visible to the issuer who created them until they're shared. Once shared, they become visible to shared parties. Understanding how status affects visibility helps you know when pools become visible to others.

**Sharing Controls Visibility** - Pools must be shared with your organization for you to see them (unless you created them). Issuers control sharing, determining which organizations can see pools. Understanding sharing helps you know how pools become visible to different parties.

## What You Will See

**As an Issuer** - You'll see all pools you've created, regardless of status. You'll see pools in Created, Preview, Mandate Pending, and Deal statuses. You'll see pending actions requiring your attention, such as responding to feedback. Your dashboard shows your active pools and items waiting for your action. You have full visibility into pools you've created and can manage them throughout their lifecycle.

| Pool ID     | Transaction Type | Pool Name | Asset Class        | No. of Loans | Set-up On  | Current Principal Balance | Status       | Actions |
|-------------|------------------|-----------|--------------------|--------------|------------|---------------------------|--------------|---------|
| DEBR2527569 | Credit Facility  | Demo Pool | Residential Rea... | 4126         | 12/07/2025 | 290,892,273.58            | Under Review |         |

Pools Screen - Issuer

**As a Market Maker** - You'll see pools shared with you for review, pools submitted to you for mandate review, pools where you've accepted the mandate, and deals you've helped structure. You'll see actions like reviewing pool details, accepting or rejecting mandates, providing feedback, and structuring deals. You have visibility into pools where you're involved in structuring or reviewing.

| <a href="#">← POOLS</a> |                  |           |                        |           |            |                           |                  | <input type="text" value="Search Pool ID, Pool Name..."/> |  |

Pools Screen - Rating Agency

**Action Availability** - Action buttons are automatically enabled or disabled based on your role and the pool's status. You'll only see actions you can actually take. Disabled buttons typically show tooltips explaining why they're disabled. Understanding action availability helps you know what you can do and why certain actions might not be available.

**Status Indicators** - Pools display status badges showing where they are in their workflow. These indicators help you quickly understand what stage pools are at and what actions might be available. Understanding status indicators helps you navigate pools effectively.

**Filtered Information** - The information shown for each pool is filtered based on your role. You'll see information relevant to your role and responsibilities. This filtering ensures you see what's relevant to your role without being overwhelmed by irrelevant information.

## Helpful Tips

**Check Sharing Settings** - If you're an issuer and want others to see your pool, make sure you've shared it with the right organizations. If you're a market maker or investor and can't see a pool, check if it's been shared with your organization. Understanding sharing settings helps you control visibility and ensure pools are visible to the right parties.

**Understand Status Visibility** - Pools in Created status are only visible to the issuer until shared. Once shared, they become visible to shared parties. Understanding status visibility helps you know when pools become visible to others and what statuses affect visibility.

**Use the Correct Role** - Make sure you're logged in with the correct role for what you want to do. If you want to create pools, use the Issuer role. If you want to review opportunities, use the Investor role. Using the correct role ensures you see the right pools and have the right actions available.

**Check Action Tooltips** - When actions are disabled, hover over buttons or check tooltips to see why they're disabled. This helps you understand what needs to happen to enable actions. Tooltips provide helpful information about why actions might not be available.

**Multiple Roles** - If you have multiple roles, you can log in with different roles at different times to see different views. Each role shows you a different set of pools and actions. Understanding multiple roles helps you use the platform effectively when you have multiple responsibilities.

**Dashboard First** - Check your dashboard first—it shows items relevant to your role, pending actions, and recent activity. This helps you quickly see what needs your attention. The dashboard provides a quick overview of pools requiring your attention.

**Status Affects Actions** - Remember that both your role and the pool's status determine what actions are available. Even if you have permission, the status must allow the action. Understanding how status affects actions helps you know what you can do and why certain actions might not be available.

**Collaboration Through Sharing** - Different roles collaborate through sharing. Issuers share pools with market makers and investors, who then see the pools in their views. Understanding this helps you know how to collaborate effectively with other parties.

**Filtering Is Automatic** - The platform filters information automatically—you don't need to manually filter or search through irrelevant items. Trust that you're seeing what's relevant to your role. Understanding automatic filtering helps you navigate the platform efficiently.

**Read-Only Access** - Some roles, like Rating Agency, have read-only access. You can view and analyze but cannot make changes or approvals. Understanding your access level helps you know what you can do and what actions are available to your role.

**Track Status Changes** - Monitor pool status changes to understand where pools are in their workflow. Status changes indicate progression and may affect what actions are available. Understanding status changes helps you track pool progression and know what actions are available.

Understanding role-based pool views helps you navigate the platform effectively, know what pools you can see and why, understand what actions are available to your role, and work efficiently within your responsibilities. This understanding enables you to use the platform effectively and efficiently, focusing on pools relevant to your role and taking appropriate actions based on your responsibilities.

# Pool Sharing and Mandates

Learn how to share pools with other organizations and manage mandates

## Overview

Sharing pools allows you to collaborate with other organizations in the structured finance process. You can share pools with market makers, investors, rating agencies, and other parties who need to review or participate in your transaction. Mandates are formal requests to market makers to structure deals, and managing mandates is a key part of moving pools toward completion.

## Who Can Use This

- Issuers who create pools and want to share them with other parties
- Market Makers who receive pool shares and review mandate requests
- Investors who receive pool previews for investment opportunities
- Rating Agencies and other parties involved in transactions

## When This Is Used

Use pool sharing when you:

- Want market makers to review pools and accept mandates to structure deals
- Need investors to see investment opportunities and express interest
- Want rating agencies to analyze pools for rating purposes
- Need to collaborate with multiple parties on a transaction
- Want to get feedback before finalizing a pool

Use mandates when you:

- Have a pool ready for structuring
- Want a market maker to formally commit to structuring the deal

- Need to move a pool from preview to deal status
- Want to establish a formal relationship with a market maker for deal structuring

## Step-by-Step Process

### Sharing a Pool

#### 1. Prepare Your Pool

- Ensure pool information is complete and accurate
- Map loans to the pool and verify loan data
- Review pool metrics for accuracy (total balance, loan count, weighted averages)
- Verify all details are correct before sharing
- Ensure pool is in Created or Preview status (you can only share pools in these statuses)

#### 2. Access Sharing Settings

- Navigate to your pool's details page
- Find the sharing or organization assignment section
- Click to add or modify sharing settings

Pool Share - Issuer

The screenshot shows the 'POOL - DEMO POOL' interface. At the top, there are buttons for 'Edit', 'Share', and 'Start Deal'. Below this, there's a section for 'Overview' with a progress bar for 'NFT Completion' at 0%. A 'Mapped Loans' section is visible with tabs for Summary, Loans, Loan Tape, Strats, Performance, Feedback, and Sharing. The 'Sharing' tab is active, showing 'Active Shares' with two entries: 'Facility Agent Demo - Market Maker' and 'Lender Demo 1 - Investor'. Each entry has 'Download' and 'Feedback' toggle switches, both currently set to 'Off'.

Pools Sharing Settings

### 3. Select Recipient Organizations

- Choose which organizations to share with from available options
- Select market makers for structuring and mandate review
- Select investors for investment opportunities
- Select rating agencies for analysis
- Select other parties as needed (servicers, paying agents, etc.)
- You can share with multiple organizations simultaneously

The screenshot shows the 'Share Pool' dialog box open over the 'POOL - DEMO POOL' interface. The dialog box has a 'Recipient' dropdown menu with 'Select any one' selected. Below the dropdown, there are three options: 'Market Maker - Underwriter/Arranger/Placement Agent', 'Investor', and 'Rating Agency'. At the bottom of the dialog, there are 'Allow Download' and 'Allow Feedback' toggle switches, both currently set to 'Off'. There are 'Cancel' and 'Share' buttons at the bottom right of the dialog. The background interface shows the 'Overview' and 'Mapped Loans' sections, with the 'Sharing' tab selected.

Pool Share - Select Recipient Organization

#### 4. **Set Sharing Permissions**

- Control what recipients can see and do with the pool
- Allow or restrict feedback capabilities
- Allow or restrict download permissions
- Set appropriate access levels for each organization type
- Configure whether recipients can request changes

#### 5. **Complete the Sharing Process**

- Review your sharing selections
- Confirm the sharing action
- Recipients receive notifications that the pool has been shared
- Pool becomes visible to shared parties in their views
- Pool status may change to Preview if it was in Created status

#### 6. **Verify Sharing**

- Confirm that recipients can see the pool
- Check that sharing permissions are set correctly
- Verify notifications were sent

### **Managing Mandates**

#### 1. **Prepare Pool for Mandate Submission**

- Ensure pool is shared with the market maker
- Verify pool information is complete
- Review pool metrics and loan characteristics
- Ensure pool meets requirements for mandate submission
- Pool should be in Preview status

#### 2. **Submit Pool for Mandate**

- Navigate to the pool's mandate or submission section
- Select the market maker you want to submit to
- Review mandate details and requirements
- Submit the pool for mandate review

- Status changes to Mandate Pending
- Market maker receives notification

### 3. Market Maker Reviews the Pool

- Market maker sees the pool in their view
- Market maker analyzes pool details, metrics, and loan characteristics
- Market maker reviews pool composition and quality
- Market maker evaluates whether to accept the mandate
- Market maker can request changes or provide feedback before deciding

### 4. Market Maker Makes Decision

- **Accept:** Market maker accepts the mandate and commits to structuring the deal
  - Pool status changes to Deal
  - Market maker proceeds with deal structuring
  - Pool moves forward in the workflow
- **Reject:** Market maker declines the mandate
  - Pool may return to Preview status
  - You can submit to another market maker
  - You receive notification of rejection
- **Request Changes:** Market maker provides feedback and requests modifications
  - Pool remains in Mandate Pending or returns to Preview
  - You can make changes and resubmit

### 5. Handle Mandate Acceptance

- If accepted, pool moves to Deal status
- Market maker proceeds with structuring activities
- Editing is restricted as pool is finalized
- All parties are notified of mandate acceptance
- Deal moves toward completion

### 6. Handle Mandate Rejection

- If rejected, review the reason for rejection

- Make improvements if needed
- Submit to another market maker if desired
- Pool returns to Preview status for further work

## Rules & Validations

- You can only share pools while they're in Created or Preview status. Once a pool reaches Deal status, sharing is typically not needed as it's already finalized.
- Sharing permissions control what recipients can do. Some recipients may have view-only access, while others can provide feedback or request changes.
- A pool can be shared with multiple parties simultaneously. You don't need to share with one party at a time.
- Market makers can accept or reject mandates. They cannot be forced to accept, and rejection is a valid outcome.
- Mandate acceptance moves pool toward Deal status. Once accepted, the pool is committed to that market maker for structuring.
- You can share with different market makers if one rejects. Rejection doesn't prevent you from submitting to another market maker.
- Pool status affects sharing capabilities. Some statuses may restrict sharing or mandate submission.
- Recipients must have appropriate roles. Market makers can accept mandates, investors can review opportunities, etc.
- Sharing is recorded in audit trail. All sharing actions are tracked with who shared what with whom and when.
- Mandate decisions are final. Once a market maker accepts or rejects, that decision is recorded and affects pool status.

## What Happens Next

After sharing a pool:

- Recipients can view and analyze the pool in their views
- Market makers can review and accept mandates to structure deals

- Investors can review opportunities and express interest
- Rating agencies can analyze pool characteristics for rating purposes
- You receive feedback and can respond accordingly
- Pool may progress through statuses based on recipient actions

After submitting for mandate:

- Market maker receives notification and reviews the pool
- Market maker makes a decision (accept, reject, or request changes)
- Pool status updates based on the decision
- If accepted, pool moves to Deal status and market maker structures the deal
- If rejected, you can submit to another market maker or make improvements

After mandate acceptance:

- Pool is finalized and moves to Deal status
- Market maker proceeds with deal structuring
- Editing is restricted as pool is committed
- Deal moves toward completion
- All parties are notified and can track progress

Pool sharing and mandates enable collaboration with other parties, helping you move pools through the structured finance workflow and complete successful transactions with proper structuring and approvals.

# Pool Feedback Workflow

Learn how to provide and respond to feedback on pools

## Overview

The feedback workflow allows market makers, investors, and other parties to provide input on pools shared with them. This collaborative process helps improve pool quality, ensures all parties are aligned before finalizing deals, and enables effective communication between issuers and reviewers. Feedback can be provided at both pool-level and loan-level, allowing for detailed and specific input.

## Who Can Use This

- Market Makers who review pools and want to request changes or provide comments
- Investors who review opportunities and have questions or concerns
- Rating Agencies who analyze pools and need to communicate findings
- Issuers who receive feedback and need to respond and make changes

## When This Is Used

Use feedback workflow when:

- Reviewers want to request changes or provide comments on pools
- Issuers need to address feedback and improve pools based on input
- Parties want to discuss pool details or ask questions
- Change requests need to be communicated formally
- Issues or concerns need to be flagged for attention
- Clarifications are needed about pool characteristics or loan data

## Step-by-Step Process

## Providing Feedback

### 1. Review the Pool

- Navigate to the shared pool in your view
- View pool details, metrics, and loan characteristics
- Analyze loan data and pool composition
- Identify areas needing attention or improvement
- Review pool information thoroughly before providing feedback

### 2. Decide Feedback Type and Level

- **General Feedback:** Comments, questions, or observations about the pool
- **Change Request:** Formal request for modifications that need to be addressed
- **Pool-Level Feedback:** Feedback about the pool overall (metrics, composition, structure)
- **Loan-Level Feedback:** Feedback about specific loans (data issues, eligibility, characteristics)
- Choose the appropriate type and level for your feedback

### 3. Access Feedback Function

- Navigate to the pool's feedback section
- Click to add new feedback
- Select whether this is pool-level or loan-level feedback
- If loan-level, select the specific loan(s) you're providing feedback on

Pools Feedback - Market Maker

#### 4. Enter Feedback Details

- Type your feedback message clearly and specifically
- Specify if this is a change request (requires action) or general feedback (informational)
- Provide context and explanation for your feedback
- Be specific about what needs to change or what your concern is
- Include any relevant details that help the issuer understand your feedback

#### 5. Submit Feedback

- Review your feedback message
- Confirm the feedback type and level
- Submit the feedback
- Issuer receives notification about the feedback
- Feedback is recorded and tracked

#### 6. Track Feedback Status

- View your submitted feedback
- See if issuer has viewed or responded to it
- Monitor whether changes have been made based on your feedback
- Follow up if needed

## Responding to Feedback (Issuers)

### 1. Review All Feedback

- Check your dashboard for pools with unread feedback
- Navigate to pools with feedback notifications
- Review all feedback messages carefully
- Check change requests first (these require action)
- Read comments and questions
- Note any flagged items or concerns

### 2. Prioritize Actions

- Address critical issues first (blocking problems, data errors)
- Handle change requests that prevent pool progression
- Then address other feedback and questions
- Create a plan for addressing all feedback

### 3. Make Necessary Changes

- Update pool information if needed
- Fix identified data issues
- Address loan-level concerns (remove loans, correct data, etc.)
- Update pool metrics if loans are added or removed
- Resolve flagged items
- Make all changes requested in change requests

### 4. Communicate Your Response

- Respond to feedback messages with your actions
- Explain changes you made
- Answer questions that were asked
- Ask for clarification if feedback is unclear
- Confirm when you've completed requested changes
- Provide updates on your progress

### 5. Mark Feedback as Addressed

- Indicate when you've addressed feedback

- Mark change requests as completed after making changes
- Update feedback status to show it's been handled
- Notify reviewers that changes have been made

#### 6. **Resubmit if Needed**

- When changes are complete, resubmit the pool for review
- Status may update to reflect resubmission
- Reviewers are notified of changes
- Reviewers can review changes and provide additional feedback if needed

## Managing Feedback History

### 1. **View Feedback History**

- Access the pool's feedback section
- See all feedback messages in chronological order
- View who provided feedback and when
- See feedback status (unread, read, addressed)

### 2. **Filter and Search Feedback**

- Filter by feedback type (change request vs. general feedback)
- Filter by level (pool-level vs. loan-level)
- Search for specific feedback messages
- View feedback from specific reviewers

### 3. **Track Feedback Resolution**

- See which feedback has been addressed
- Track which change requests are completed
- Monitor outstanding feedback that needs attention
- Ensure all critical feedback is resolved

## Rules & Validations

- You can only provide feedback if sharing permissions allow it. Some pools may have view-only access, preventing feedback.

- Change requests require issuers to make changes and resubmit. Change requests are more formal than general feedback and require action.
- Feedback can be pool-level or loan-level. Pool-level feedback is about the pool overall, while loan-level feedback is about specific loans.
- Unread feedback is tracked and highlighted. Issuers see notifications and counts of unread feedback.
- Issuers can respond to feedback by making changes or adding comments. You can address feedback through actions or communication.
- Feedback is permanent and recorded. All feedback is stored in the audit trail with who provided it and when.
- Multiple reviewers can provide feedback. Different parties can provide feedback on the same pool.
- Feedback can be provided at any time while pool is shared. As long as the pool is shared and in an appropriate status, feedback can be provided.
- Loan-level feedback requires selecting specific loans. You must identify which loan(s) your feedback relates to.
- Feedback notifications are sent automatically. Issuers receive notifications when feedback is provided.

## What Happens Next

After providing feedback:

- Issuers receive notifications about the feedback
- Feedback appears in the pool's feedback section
- Unread feedback is highlighted for issuers
- Change requests require pool updates and resubmission
- General feedback can be addressed through discussion or changes
- Feedback history is maintained for audit purposes

After responding to feedback:

- Reviewers can see your responses and changes
- Change requests are marked as addressed when changes are made

- Pool may be resubmitted for review
- Reviewers can provide additional feedback if needed
- Pool quality improves through iterative feedback and changes

After resolving feedback:

- All parties can see that feedback has been addressed
- Change requests are marked as completed
- Pool can progress to next stages
- Feedback history shows the complete conversation
- Pool is improved based on collaborative input

The feedback workflow enables effective collaboration, helping improve pool quality through constructive input and ensuring all parties are aligned before finalizing deals. This iterative process helps catch issues early and ensures pools meet all requirements before commitment.

# Loans Overview

Learn what loans are and how they work in the platform

## Overview

Loans are individual credit agreements representing money lent to borrowers. In Intain Markets, loans are the building blocks of pools—you group multiple loans together to create pools for securitization, whole loan sales, or credit facilities. Understanding loans helps you effectively manage your loan portfolios and create successful pools.

## What Loans Are

A loan represents a single credit agreement where money has been lent to a borrower. Each loan contains detailed information about the borrower, the loan amount, interest rates, payment terms, loan characteristics, and performance data. Loans are the fundamental units that make up larger transactions—you organize multiple loans into pools to present them to investors or use them in credit facilities.

Loans have their own lifecycle within the platform. They start as uploaded data, get processed and standardized, can be mapped to pools, go through verification and processing, may be tokenized, and can be removed or reinstated as needed. Each loan contributes its characteristics to pool-level metrics when mapped to a pool.

## Purpose and Use Cases

Loans serve as the foundation for structured finance transactions:

**For Pool Creation** - Loans are the building blocks of pools. You map multiple loans to a pool to create investment opportunities or transaction packages. Pool metrics aggregate individual loan characteristics.

**For Investment Analysis** - Investors and market makers review individual loan details to assess quality, evaluate risk, and make investment decisions. Loan characteristics help determine pool quality and attractiveness.

**For Loan Servicing** - After deals are completed, servicers manage individual loans, tracking payments, updating statuses, and handling ongoing administration. Each loan requires individual attention for servicing.

**For Quality Management** - Loans can be removed from pools if they don't meet quality standards or have data issues. Removed loans are excluded from calculations but can be reinstated when issues are resolved.

**For Portfolio Management** - Issuers manage loan portfolios, organizing loans into pools, tracking loan status, and ensuring data quality throughout the transaction lifecycle.

## Key Components

**Borrower Information** - Details about the borrower including name, contact information, and other identifying information. This helps understand who the loan is with and enables borrower-level analysis.

**Financial Details** - Loan amount, interest rate (coupon), payment terms, maturity date, and other financial characteristics. These details determine the loan's financial profile and contribution to pool metrics.

**Loan Characteristics** - FICO scores, loan-to-value ratios, geographic location, loan type, and other characteristics that help assess loan quality and risk. These characteristics aggregate to create pool-level statistics.

**Status Information** - Current status showing where the loan is in its lifecycle, such as Unmapped, Mapped, Submitted, Verified, Minted, Removed, or Reinstated. Status tracks loan progression through the workflow.

**Performance Data** - Payment history, current balance, outstanding amounts, and other performance metrics. This data helps assess loan quality and track performance over time.

**Pool Assignment** - Which pool the loan is mapped to (if any). Loans can only belong to one pool at a time, ensuring clear ownership and preventing conflicts.

## How Loans Work

**Upload and Processing** - You upload loan data into the platform, typically through file upload. The system processes and standardizes the data, validates loan information, and makes loans available for mapping to pools or individual management.

Loans Onboarding - Uploading - Issuer

**Mapping to Pools** - You assign loans to pools by mapping them. When loans are mapped, they contribute their balance and characteristics to pool metrics. Pool metrics calculate automatically to include the mapped loan.

Loan Map to Pool - Issuer

**Batch Verification and NFT Minting** - After mapping loans to pools, loans are added to batches for verification and NFT minting. Batches group multiple loans together for efficient processing. During verification, the system validates loan data and ensures everything is correct. Once verified, loans can be minted as NFTs (Non-Fungible Tokens) on the blockchain, creating a digital representation of each loan that enables secure tracking, ownership, and transfer. The batch process ensures loans are properly verified and tokenized before they can be used in transactions.

**Status Progression** - Loans progress through statuses from Unmapped to Mapped to Submitted to Verified, and potentially to Minted if tokenization is required. Status shows where each loan is in its lifecycle and what actions are available.

**Removal and Reinstatement** - Loans can be removed from pools if they don't meet criteria or have issues. Removed loans are excluded from pool calculations but remain visible. They can be reinstated when issues are resolved, and metrics recalculate to include them.

**Contribution to Pool Metrics** - Individual loan characteristics aggregate to create pool-level statistics. Loan balances sum to total pool balance, loan counts aggregate, and weighted averages calculate from individual loan rates and scores.

**Individual Management** - Each loan can be managed individually—you can view loan details, update information, track status, and manage loans independently of pools when needed.

## Important Points to Know

**One Pool Per Loan** - Loans can only belong to one pool at a time. If you want to move a loan to a different pool, you must unmap it from the current pool first. This ensures clear ownership and prevents conflicts.

**Automatic Pool Calculations** - When you map loans to pools, pool metrics calculate automatically. Total balance, loan count, weighted averages, and other statistics update immediately to reflect the mapped loans.

**Removed Loans Are Excluded** - Removed loans don't affect pool calculations but remain visible for tracking purposes. This allows you to maintain pool quality while preserving complete records. Removed loans can be reinstated when issues are resolved.

**Loan Characteristics Aggregate** - Individual loan characteristics (FICO scores, interest rates, etc.) aggregate to create pool-level statistics that help investors assess opportunities. Understanding loan characteristics helps you create better pools.

**Status Tracks Lifecycle** - Loan status shows where each loan is in its lifecycle, from upload through mapping, processing, verification, and potentially tokenization. Understanding status helps you track loan progress.

**Complete History** - The platform maintains history of loan status changes, mappings, and other actions, ensuring complete traceability. You can see how loans have progressed and who made changes.

Understanding loans helps you effectively manage loan portfolios, create successful pools, ensure loan data quality, track loans throughout their lifecycle, and understand how individual loans contribute to pool-level metrics and transactions.

# Loan Lifecycle and Statuses

Understand the different stages loans go through and what each status means

## Overview

Loans progress through various statuses as they move through the platform workflow. Understanding these statuses helps you track where each loan is in the process, know what actions are available, and understand why certain actions are disabled. Each status represents a specific stage in the loan's journey from upload to final state, and understanding these statuses helps you manage loans effectively throughout the structured finance workflow.

## Lifecycle Overview

Loans typically start as **Unmapped** when first uploaded into the system, progress to **Mapped** when assigned to a pool, may move to **Submitted** when included in a batch, advance to **Verified** after verification, potentially reach **Minted** if tokenization is required, and may be **Removed** from pool calculations if needed, with the option to be **Reinstated** later. This progression ensures that loans move through proper stages with appropriate processing and validation at each step.

The lifecycle is designed to support loan management—you upload loans, assign them to pools, they go through verification and processing, and they may be tokenized or removed as needed. Each stage has specific purposes and allows different types of actions, ensuring that loans progress correctly through the structured finance workflow. Understanding this lifecycle helps you know what to expect and how to navigate loan management effectively.

## Status Meanings

**Unmapped** - The loan has been uploaded into the system but is not yet assigned to any pool. This is the initial stage where loans are available for mapping. Loans in Unmapped status are available for assignment but don't contribute to any pool metrics.

**Mapped** - The loan has been assigned to a pool and is included in pool calculations. The loan contributes to pool metrics and characteristics. Loans in Mapped status are actively participating in pools and affecting pool-level statistics.

**Submitted** - The loan has been included in a batch for verification or other processing. The loan is being reviewed or processed. Loans in Submitted status are moving through verification or processing workflows.

**Verified** - The loan has been verified and can proceed to next stages such as tokenization. The loan meets quality and compliance requirements. Loans in Verified status have passed verification and are ready for further processing.

**Minted** - An NFT (non-fungible token) has been created for the loan, and the loan is tokenized. This status only applies if tokenization is part of your workflow. Loans in Minted status are represented on the blockchain and ready for blockchain-based transactions.

**Removed** - The loan has been removed from pool calculations but remains visible in the pool. The loan is excluded from metrics but can be tracked. Loans in Removed status are temporarily or permanently excluded from pool calculations.

**Reinstated** - A previously removed loan has been put back into the pool and is included in calculations again. The loan fully participates in the pool. Loans in Reinstated status have been restored to active participation in pools.

## What Each Status Indicates

**Unmapped Status** indicates that the loan is available for assignment but hasn't been mapped to a pool yet. You can map it to a pool, edit information if allowed, or manage it independently. This status tells you that the loan is ready to be included in a pool. You have full control over unmapped loans and can assign them to pools when ready.

**Mapped Status** indicates that the loan is part of a pool and contributing to pool calculations. Pool metrics include this loan, and you can unmap it if needed. This status tells you that the loan is actively participating in a pool. The loan affects pool-level statistics and characteristics.

**Submitted Status** indicates that the loan is being processed or verified as part of a batch. The loan is in a review or processing stage. This status tells you that the loan is moving through verification or processing workflows. You typically need to wait for processing to complete before taking further actions.

**Verified Status** indicates that the loan has passed verification and meets quality standards. The loan can proceed to tokenization or other next stages. This status tells you that the loan is ready for further processing. The loan has met quality and compliance requirements.

**Minted Status** indicates that the loan has been tokenized and an NFT has been created. The loan is now represented on the blockchain. This status tells you that tokenization is complete and the loan is ready for blockchain-based transactions. The loan is fully tokenized and ready for blockchain operations.

**Removed Status** indicates that the loan has been excluded from pool calculations, likely due to data quality issues, not meeting pool criteria, or errors needing correction. The loan remains visible for tracking but doesn't affect pool metrics. This status tells you that the loan is temporarily or permanently excluded from calculations. You can track removed loans and reinstate them when appropriate.

**Reinstated Status** indicates that a previously removed loan has been put back into the pool. The loan is included in calculations again and fully participates in the pool. This status tells you that issues have been resolved and the loan is active again. The loan fully contributes to pool metrics and characteristics.

Understanding loan lifecycle and statuses helps you track where loans are in the process, know what actions are available, understand why certain actions are disabled, manage loans effectively throughout the structured finance workflow, and work efficiently within the loan management system.

# Loan Rejection and Reinstatement

Learn how to remove loans from pools and put them back when needed

## Overview

Sometimes loans need to be removed from pools temporarily or permanently, and later reinstated when appropriate. Understanding loan rejection and reinstatement helps you maintain pool quality, address data issues, and adjust pool composition as needed. This process allows you to manage pool composition flexibly while maintaining data integrity and ensuring pools meet quality standards.

## Possible Outcomes

When you remove a loan from a pool, the loan enters a "Removed" status. When you reinstate a loan, it returns to active participation in the pool. These are the two main outcomes for loan status management within pools. Understanding these outcomes helps you know what happens when you remove or reinstate loans and how these actions affect pool metrics and composition.

## What Each Outcome Means

**Removed Status** means the loan has been excluded from pool calculations but remains visible in the pool for tracking purposes. Pool metrics automatically recalculate to exclude the removed loan—total balance decreases, loan count decreases, and weighted averages recalculate without the removed loan. The loan is still visible in the pool list but marked as removed, allowing you to track what was excluded and why. This status is useful when loans don't meet pool criteria, have data quality issues, need correction, or when pool requirements change. Removed loans don't affect pool metrics but remain visible for audit and tracking purposes.

Loan Rejection Request - From Market Maker

**Reinstated Status** means a previously removed loan has been put back into the pool and is included in calculations again. Pool metrics automatically recalculate to include the reinstated loan—total balance increases, loan count increases, and weighted averages recalculate with the reinstated loan included. The loan fully participates in the pool again, and you can track that it was reinstated. This status is useful when issues with removed loans have been resolved, data has been corrected, pool requirements change, or you decide to include loans that were removed earlier. Reinstated loans fully participate in pool metrics and calculations.

## Next Steps for Users

**After Removing a Loan** - Review the updated pool metrics to ensure they reflect the removal correctly. Verify that the loan shows as "Removed" in the pool list. If the loan was removed due to data issues, correct the data. If it was removed because it doesn't meet criteria, determine if criteria can be adjusted or if the loan should remain removed. Consider whether other loans should also be removed for similar reasons. Track why loans were removed for future reference and audit purposes.

**After Reinstating a Loan** - Review the updated pool metrics to ensure they reflect the reinstatement correctly. Verify that the loan shows as active in the pool list. Confirm that the issues that caused removal have been resolved. Ensure the loan now meets pool criteria and requirements. Consider whether the reinstated loan affects pool characteristics in ways that are acceptable. Verify that reinstatement improves pool quality and meets requirements.

**Ongoing Management** - Monitor removed loans to see if they can be reinstated later. Track why loans were removed to help with future pool management decisions. Use removal and reinstatement to maintain pool quality and ensure pools meet requirements. Keep records of removal and reinstatement decisions for audit purposes. Regularly review removed loans to determine if they can be reinstated or should remain removed.

Understanding loan rejection and reinstatement helps you manage pool composition effectively, maintain pool quality, address data issues, adjust pools as requirements change, and ensure pools meet quality standards throughout their lifecycle.

# Removed Loans and Calculations

Understand how removed loans affect pool calculations and metrics

## Overview

When loans are removed from pools, they're excluded from pool calculations but remain visible for tracking purposes. Understanding how removed loans affect calculations helps you manage pool metrics accurately and make informed decisions about loan inclusion and exclusion. The platform automatically recalculates pool metrics when loans are removed or reinstated, ensuring that pool characteristics accurately reflect only active loans.

## Reference Details

**Removed Loans Are Excluded** - When a loan is removed from a pool, it's excluded from all pool-level calculations. The loan's balance, characteristics, and data are not included in any pool metrics. Pool metrics recalculate automatically to exclude the removed loan. This exclusion ensures that pool characteristics accurately reflect only active loans.

**Pool Metrics Recalculate Automatically** - When loans are removed, pool metrics recalculate immediately. Total balance decreases by the removed loan's balance, loan count decreases, weighted averages recalculate using only active loans, and all other metrics update to reflect only active loans. This automatic recalculation ensures that metrics are always accurate and up-to-date.

**Removed Loans Remain Visible** - Removed loans remain visible in the pool's loan list, marked with "Removed" status. This allows you to track what was removed and why, maintaining complete records for audit purposes. You can see removed loans, understand why they were removed, and reinstate them if needed.

**Reinstatement Recalculates Metrics** - When removed loans are reinstated, pool metrics recalculate again to include them. Total balance increases, loan count increases, weighted averages recalculate with the reinstated loan included, and all metrics update to reflect the reinstated loan. This automatic recalculation ensures that reinstated loans are properly included in pool metrics.

**Impact on Weighted Averages** - Weighted averages (coupon, FICO, etc.) recalculate using only active loans. Removed loans don't affect these calculations, ensuring that pool characteristics reflect only included loans. This ensures that weighted averages accurately represent active loan characteristics.

**Geographic Distribution Updates** - Geographic distribution metrics update to exclude removed loans, ensuring that location-based statistics reflect only active loans. This ensures that geographic analysis accurately represents active loan locations.

**Loan Count Adjustments** - Loan count decreases when loans are removed and increases when loans are reinstated. This ensures that loan count accurately reflects the number of active loans in the pool.

**Balance Calculations** - Total balance decreases when loans are removed and increases when loans are reinstated. This ensures that balance calculations accurately reflect only active loans.

## Important Notes

**Automatic Recalculation** - Pool metrics recalculate automatically when loans are removed or reinstated. You don't need to manually recalculate—the system handles this automatically. This automation ensures accuracy and saves time.

**Complete Tracking** - Removed loans are tracked with who removed them and when, creating complete audit trails. This ensures accountability and supports compliance requirements. You can see the complete history of loan removals and reinstatements.

**Reinstatement Is Possible** - Removed loans can be reinstated if needed. When reinstated, they're included in calculations again, and metrics update automatically. This flexibility allows you to manage pool composition effectively.

**Status Indicates Removal** - Removed loans show "Removed" status, making it clear which loans are excluded from calculations. This helps you understand pool composition and identify which loans are active and which are removed.

**Metrics Reflect Active Loans Only** - All pool metrics reflect only active loans, not removed ones. This ensures that pool characteristics accurately represent included loans. Understanding this helps you interpret pool metrics correctly.

**Impact Is Immediate** - When loans are removed or reinstated, the impact on pool metrics is immediate. Metrics update right away to reflect the change. This immediate update ensures that metrics are always current.

**No Manual Calculation Needed** - You don't need to manually recalculate metrics when loans are removed or reinstated. The system handles all calculations automatically. This automation ensures accuracy and consistency.

**Complete History Maintained** - All removal and reinstatement actions are tracked with complete history. You can see when loans were removed, who removed them, when they were reinstated, and who reinstated them. This history supports audit and compliance requirements.

Understanding removed loans and calculations helps you manage pool metrics accurately, make informed decisions about loan inclusion, track what's been removed and why, ensure pool characteristics reflect only active loans, and work effectively within the pool management system.

# Credit Facilities Overview

Learn what credit facilities are and how they work in the platform

## Overview

A credit facility is a lending arrangement where a borrower can draw down funds as needed, up to a pre-approved limit. Think of it like a line of credit—you get approved for a maximum amount, and you can borrow portions of it when you need them, rather than receiving all funds at once. Credit facilities provide flexibility for borrowers while giving lenders control over fund disbursement.

## What Credit Facilities Are

A credit facility is a flexible borrowing arrangement that allows borrowers to access funds incrementally rather than receiving everything upfront. Unlike traditional loans where you receive the full amount at once, credit facilities give you a pre-approved borrowing limit that you can draw from as needed. Each drawdown is a separate funding request that must be reviewed and approved before funds are disbursed.

Credit facilities involve multiple components working together: term sheets propose the facility, master commitments define the complete facility structure, funding requests request specific drawdowns, and funding notices document approved drawdowns. The facility remains active over time, supporting multiple drawdowns as long as you stay within approved limits.

## Purpose and Use Cases

Credit facilities serve several important purposes:

**For Flexible Borrowing** - Borrowers can access funds as needed rather than receiving everything upfront. This provides flexibility to borrow only what's needed when it's needed, reducing unnecessary borrowing costs.

**For Structured Lending** - Lenders can provide capital through structured arrangements with proper oversight. Each drawdown is reviewed individually, ensuring compliance with facility rules and proper fund usage.

**For Ongoing Relationships** - Credit facilities support ongoing relationships between borrowers and lenders. Facilities remain active over time, allowing multiple drawdowns and continuous access to capital.

**For Controlled Disbursement** - Lenders maintain control over fund disbursement through individual drawdown approvals. This ensures proper oversight and compliance with facility terms.

**For Capacity Management** - Facilities track borrowing capacity, utilization, and available capacity, ensuring borrowers stay within approved limits and lenders can monitor exposure.

## Key Components

**Term Sheets** - Initial proposals that borrowers create to request credit facilities. Term sheets outline key terms like maximum facility amount, interest rates, repayment terms, and other conditions. They must be signed electronically and submitted for facility agent review.

**Master Commitments** - Finalized credit facility agreements that define the complete facility structure. They're automatically created when term sheets are approved and contain all the rules, parameters, lender information, and borrowing base calculations needed to operate the facility.

**Funding Requests** - Specific requests to draw down funds from an active facility. Borrowers create funding requests when they need funds, specifying the amount, purpose, and providing supporting documentation. Each request must be reviewed and approved.

**Funding Notices** - Official documentation for each approved drawdown. They're automatically generated when funding requests are approved and contain details about the drawdown, token distribution to lenders, and fund transfer instructions.

**Facility Rules** - Rules that govern how the facility operates, including borrowing limits, collateral eligibility, drawdown frequency, repayment terms, and other requirements. These rules are defined in master commitments and enforced throughout the facility lifecycle.

**Borrowing Base Calculations** - Formulas and rules that determine how much you can borrow based on collateral, financial metrics, or other factors. Borrowing base calculations determine available borrowing capacity.

## How Credit Facilities Work

**Term Sheet Proposal** - Borrowers create term sheets proposing credit facilities with key terms. Term sheets are signed electronically and submitted to facility agents for review. Facility agents can approve, reject, or request changes.

**Master Commitment Creation** - When term sheets are approved, master commitments are automatically created. Facility agents configure the complete facility structure, including facility rules, borrowing base calculations, lender groups, and other parameters.

The screenshot shows the 'FACILITY OPERATIONS' interface. A 'Create Master Commitment' modal is open, and within it, the 'Configure Collateral Eligibility Rules' sub-modal is active. The sub-modal has two rule groups: 'Rule Group 1: Loan Type Eligibility' and 'Rule Group 2: Geographic Restrictions'. Under Rule Group 1, 'Residential Mortgages' and 'Commercial Real Estate' are both checked. Each checked item has associated fields: 'Min FICO: 680', 'Max LTV: 80%', and 'Min Loan Amount: \$50,000'. At the bottom right of the sub-modal are 'Cancel' and 'Apply' buttons. The background shows a table of facility types (Term Sheet, Master Commit, Fund Request) and a list of facility statuses.

Create Master Commitment - Configure Collateral Eligibility Rules Modal

**Lender Approval** - After facility agents configure master commitments, lenders review and approve them. Any lender approval activates the facility, making it operational for funding requests.

The screenshot shows the 'Review Facility' modal for lender approval. It has a tabbed interface with 'Basic' selected. The form contains the following fields: Facility ID (MC-12052025-1sr4), Facility Name (IN Credit Facility 1 - Lender 1), Origination Date (09/24/2025), Effective Date (09/24/2025), Facility Type (Warehouse Loan), Currency (USD), Commitment (1450000), and Governing Law (New York). An 'Approve & E-Sign' button is located at the bottom right.

Credit Facility - Lender Approve

**Funding Requests** - Once facilities are active, borrowers can create funding requests to draw down funds. Each request specifies the amount, purpose, and includes supporting documentation. Facility agents review requests for compliance and available capacity.

**Funding Notice Generation** - When funding requests are approved, funding notices are automatically generated. Facility agents generate tokens and sign notices for lenders. Borrowers approve token transfers, making notices visible to lenders.

**Lender Review and Approval** - Lenders review funding notices and approve or reject individual drawdowns. Each lender makes independent decisions, and participation is tracked individually.

**Fund Disbursement** - After lenders approve, they transfer funds and confirm transfers. Funds are disbursed to borrowers, completing the drawdown process.

**Active Facilities View** - The credit facility dashboard shows all active facilities, allowing you to view facility details, check borrowing capacity, and access funding request options.

Credit Facility - Active Facilities Tab - Issuer

## Important Points to Know

**Flexible Drawdowns** - Credit facilities allow borrowers to request specific amounts as needed, up to approved limits. Each drawdown is a separate funding request that must be reviewed and approved, providing flexibility while maintaining oversight.

**Structured Approval Process** - Each component requires appropriate approvals—term sheets need facility agent approval, master commitments need lender approval, and funding requests need facility agent and lender approval. This ensures proper oversight at each stage.

**Automatic Generation** - Master commitments are automatically created when term sheets are approved, and funding notices are automatically created when funding requests are approved. This streamlines the process and ensures consistency.

**Individual Lender Tracking** - Each lender's participation is tracked individually, allowing for independent decisions and flexible participation. Lenders can approve or reject individual drawdowns based on their own criteria.

**Borrowing Capacity Management** - Facilities track borrowing capacity, utilization, and available capacity, ensuring borrowers stay within approved limits. Available capacity is calculated based on facility rules and current utilization.

**Multiple Drawdowns Over Time** - You can create multiple funding requests over time as long as you stay within facility limits and available borrowing capacity. This provides ongoing access to capital throughout the facility term.

**Complete Documentation** - All facility activities are documented with complete audit trails, ensuring transparency and supporting compliance. Every action, approval, and status change is recorded.

Understanding credit facilities helps you effectively use this flexible borrowing tool, manage multiple drawdowns, work within the structured approval process, access funds when needed, and maintain proper oversight and control throughout the facility lifecycle.

# Roles in Credit Facilities

Understand the different roles and responsibilities in credit facilities

## Overview

Credit facilities involve three main parties, each with distinct responsibilities and permissions. Understanding these roles helps you know what you can do, what's expected of you, and how different parties collaborate to make credit facilities work. The platform automatically shows you only relevant information and appropriate actions based on your role, making it easier to focus on your responsibilities and work effectively within the credit facility workflow.

## Roles Covered

Credit facilities involve three primary roles, each with specific responsibilities in the credit facility lifecycle:

- **Borrower** - Organizations that need funding and create credit facility requests. They initiate facilities and request drawdowns.
- **Facility Agent** - Organizations that structure and manage credit facilities. They review proposals, configure facilities, and facilitate transactions between borrowers and lenders.
- **Lender** - Organizations that provide capital for credit facilities. They approve facilities and fund drawdowns.

## What Each Role Can Do

### Borrower Role

Borrowers are organizations that need funding and create credit facility requests. They initiate the credit facility process and manage their borrowing needs.

### Primary Capabilities:

- Create term sheets proposing new credit facilities with facility terms, amounts, interest rates, and repayment terms
- Sign term sheets electronically before submission
- Submit term sheets for facility agent review
- Respond to change requests by updating term sheets and resubmitting
- Create funding requests to draw down funds from active facilities
- Specify drawdown amounts, purposes, and funding dates
- Approve token transfers when funding notices are generated
- Monitor facility status and track term sheet and funding request status
- View facility details and monitor borrowing capacity and utilization

**Limitations:**

- Cannot approve their own term sheets or funding requests—these require facility agent approval
- Cannot configure master commitments—this is the facility agent's responsibility after term sheet approval
- Cannot approve funding notices—this is the lender's responsibility
- Cannot sign funding notices—facility agents sign on behalf of lenders

**Responsibilities:**

- Ensure term sheet information is accurate and complete
- Respond to change requests promptly
- Create funding requests that comply with facility rules
- Monitor borrowing capacity and utilization
- Track facility and request status

**Facility Agent Role**

Facility agents structure and manage credit facilities, acting as intermediaries between borrowers and lenders. They play a crucial role in reviewing proposals, configuring facilities, and facilitating transactions.

**Primary Capabilities:**

- Review term sheets submitted by borrowers
- Approve, reject, or request changes to term sheets
- Configure master commitments after they're auto-created from approved term sheets
- Set up complete facility structures including facility rules, borrowing base calculations, lender groups, and other parameters
- Review funding requests for compliance with facility rules
- Verify borrowing capacity and review documentation
- Approve or reject funding requests
- Generate tokens and configure token distribution for funding notices
- Sign funding notices on behalf of lenders before sending them to lenders for approval
- Monitor facility status and track borrowing capacity
- Manage lender groups and ensure facilities operate according to rules

**Limitations:**

- Cannot create term sheets or funding requests—these are borrower responsibilities
- Cannot approve master commitments or funding notices—these are lender responsibilities
- Cannot provide capital—this is the lender's role
- Cannot approve their own reviews—approval decisions are tracked separately

**Responsibilities:**

- Review term sheets thoroughly and make informed decisions
- Configure facility structures completely and accurately
- Ensure facility rules are properly defined
- Review funding requests for compliance
- Facilitate transactions efficiently

## **Lender Role**

Lenders provide capital for credit facilities. They review facilities, approve master commitments, and fund drawdowns based on their investment criteria.

### **Primary Capabilities:**

- Review master commitments submitted for approval
- Approve or reject master commitments to activate facilities
- Review funding notices after borrower token approval
- Approve or reject individual drawdowns independently
- Confirm fund transfers after approving drawdowns
- View facility details and track participation
- Monitor facility status and borrowing capacity
- Evaluate drawdown requests based on their own criteria

### **Limitations:**

- Cannot create term sheets or funding requests—these are borrower responsibilities
- Cannot configure master commitments—this is the facility agent's responsibility
- Cannot approve term sheets or funding requests—these require facility agent approval first
- Cannot sign funding notices—facility agents sign on behalf of lenders

### **Responsibilities:**

- Review facilities thoroughly before approval
- Make informed decisions about participation
- Evaluate drawdown requests independently
- Confirm fund transfers promptly
- Track participation and commitments

## Important Access Notes

**Role Selection** - You must select the correct role during login that matches your account. If you have multiple roles, you can log in with different roles at different times, but you can only use one role per session. The role you select determines what you can see and do in credit facilities.

**Role-Based Views** - Your role determines your view—you only see credit facilities where you have a role or where facilities are relevant to you. The platform automatically filters information based on your role, showing you only what's relevant to your responsibilities.

**Action Availability** - Action buttons are enabled or disabled based on your role and the facility's status. Disabled buttons usually show a reason why the action isn't available. Understanding role-based action availability helps you know what you can do and why certain actions might not be available.

**Collaboration Between Roles** - Collaboration between roles is essential—borrowers create facilities, facility agents structure them, and lenders provide capital. Understanding how roles collaborate helps you work effectively with other parties.

**Role Attribution** - All actions are recorded with role information, ensuring accountability and proper attribution. This role attribution ensures that actions are traceable to specific roles and users.

**Sequential Responsibilities** - Roles have sequential responsibilities—borrowers create, facility agents review and configure, lenders approve and fund. Understanding sequential responsibilities helps you know when your actions are needed.

**Independent Decisions** - Lenders make independent decisions about participation. Each lender can approve or reject drawdowns based on their own criteria. Understanding independent decisions helps you know how lender participation works.

**Facility Agent Intermediary Role** - Facility agents act as intermediaries, structuring facilities and facilitating transactions. They don't provide capital but enable transactions between borrowers and lenders. Understanding this intermediary role helps you appreciate how facility agents add value.

**Borrower Initiation** - Borrowers initiate the credit facility process by creating term sheets. They cannot proceed without facility agent and lender participation. Understanding borrower initiation helps you know how facilities start.

**Complete Workflow** - All three roles are needed for credit facilities to work—borrowers create, facility agents structure, and lenders fund. Understanding the complete workflow helps you appreciate how roles work together.

Understanding roles in credit facilities helps you navigate the platform effectively, know what actions you can take, understand what others can do, and understand how different parties collaborate to make credit facilities work. This understanding enables effective collaboration and ensures that credit facilities progress correctly through proper role-based workflows.

# Term Sheet Workflow

Understand the term sheet process from creation to approval

## Overview

The term sheet is the first step in creating a credit facility. It's the borrower's proposal outlining the key terms of the facility they want, including maximum facility amount, interest rates, repayment terms, and other conditions. Understanding the term sheet workflow helps you navigate this critical first phase from creation through approval.

## Who Can Use This

- Borrowers who create term sheets and want to propose new credit facilities
- Facility Agents who review term sheets and make approval decisions

## When This Is Used

Use term sheet workflow when:

- You want to propose a new credit facility to lenders
- You need to request flexible funding arrangements
- You want to understand how term sheets progress from creation to approval
- You need to review a borrower's proposal as a facility agent
- You want to know what happens after term sheet approval

## Step-by-Step Process

### Creating a Term Sheet

#### 1. Access Term Sheet Creation

- Navigate to the term sheets section

- Click "Create New Term Sheet" or similar button
- Term sheet form opens with required fields

## 2. Enter Facility Information

- **Facility Name:** Enter a unique name for the facility
- **Maximum Facility Amount:** Specify the total borrowing limit you're requesting
- **Interest Rate:** Enter the proposed interest rate or rate structure
- **Repayment Terms:** Specify how and when repayments will be made
- **Term:** Enter the facility term or duration
- **Purpose:** Describe the purpose of the facility
- **Other Terms:** Fill in any other required facility terms

## 3. Upload Required Documents

- Upload supporting documents that justify the request
- Include financial statements, business plans, or other required documentation
- Ensure documents meet quality and format requirements
- Verify all required documents are included

## 4. Review Your Entry

- Check all information for accuracy
- Verify all required fields are filled
- Ensure documents are uploaded correctly
- Review terms to ensure they're reasonable and complete

## 5. Save as Draft

- Save your term sheet as a draft
- You can return later to complete or edit
- Draft status allows you to work on it over time
- Status shows as "Draft"

**New Term Sheet**

Issuer - Term Sheet Creation

## Signing the Term Sheet

### 1. Complete Draft

- Ensure all required information is entered
- Verify all documents are uploaded
- Review everything one final time
- Make any final edits needed

### 2. Initiate Electronic Signature

- Click to sign the term sheet electronically
- Electronic signature interface opens
- Review the document you're signing
- Complete the signature process

### 3. Verify Signature

- Confirm signature is complete
- Review the signed version
- Verify all information is still correct
- Ensure signature is legally binding

### 4. Status Updates

- Status changes to reflect that term sheet is signed

- Term sheet is ready for submission
- You can now submit for facility agent review

## **Submitting for Review**

### **1. Prepare for Submission**

- Ensure term sheet is signed
- Verify all information is complete and accurate
- Review all terms one final time
- Confirm you're ready to submit

### **2. Submit to Facility Agent**

- Click "Submit for Review" or similar button
- Confirm the submission action
- Status changes to "Under Review" or "Pending Facility Agent Review"
- Facility agent receives notification

### **3. Wait for Review**

- Facility agent reviews your term sheet
- Review typically takes a few days
- You receive notifications about status changes
- You can monitor review progress

## **Facility Agent Review and Decision**

### **1. Facility Agent Reviews**

- Facility agent evaluates your term sheet
- Reviews facility terms, amounts, and conditions
- Checks supporting documentation
- Assesses feasibility and compliance

Review Term Sheet - FA

## 2. Facility Agent Makes Decision

- **Approve:** Term sheet meets requirements
  - Status changes to "Approved"
  - Master commitment is automatically created
  - You receive notification of approval
- **Reject:** Term sheet doesn't meet requirements
  - Status changes to "Rejected"
  - Rejection reason is provided
  - You receive notification of rejection
- **Request Changes:** Modifications are needed
  - Status changes to "Changes Requested"
  - Change request details are provided
  - You receive notification of change request

## Responding to Change Requests

### 1. Review Change Request

- Read change request details carefully
- Understand what needs to be modified
- Note any deadlines or priorities
- Check if re-signing is required

### 2. Make Requested Changes

- Open term sheet for editing (status allows editing)
- Update fields as requested
- Modify documents if needed
- Address all requested changes
- Save your changes

### 3. Re-sign if Required

- If key terms changed, you may need to re-sign
- Complete electronic signature again
- Verify signed version is correct
- Ensure all changes are reflected

### 4. Resubmit for Review

- When all changes are complete
- Resubmit for facility agent review
- Status changes back to "Under Review"
- Process repeats until approved or rejected

## Rules & Validations

- You can only edit term sheets while they're in Draft or Changes Requested status. Once submitted or approved, editing is restricted.
- You must sign the term sheet electronically before submitting. Unsigned term sheets cannot be submitted.

- Facility agents can approve, reject, or request changes. They cannot create term sheets themselves.
- Approved term sheets automatically create master commitments. You don't need to create master commitments manually.
- Rejected term sheets cannot be resubmitted. If rejected, you must create a new term sheet.
- Change requests allow iterative improvement. You can go through multiple rounds of changes until approved or rejected.
- Electronic signatures are legally binding. Once signed, term sheets represent formal proposals.
- Status controls what actions are available. You can only take actions allowed by the current status.
- All changes are recorded. Every edit, signature, and status change is tracked in the audit trail.
- Required fields must be completed. You cannot submit until all required information is provided.

## What Happens Next

After creating a term sheet:

- You can sign it electronically and submit for review
- Facility agent reviews and makes a decision
- If approved, master commitment is automatically created
- If rejected, you can create a new term sheet
- If changes are requested, you can update and resubmit

After term sheet approval:

- Master commitment is automatically created
- Facility agent configures the complete facility structure
- Facility agent submits master commitment for lender approval
- Lenders review and approve the facility
- Facility becomes active, and you can create funding requests

Understanding the term sheet workflow helps you effectively navigate the first phase of credit facility creation, know what to expect at each stage, and successfully move from proposal to active facility.

# Term Sheet Change Requests

Learn how to respond to change requests on term sheets

## Overview

When a facility agent reviews a term sheet and needs modifications, they can request changes. This allows borrowers to update the term sheet and resubmit it for review, creating an iterative improvement process that helps refine proposals before approval. Understanding change requests helps you effectively respond to facility agent feedback and improve your term sheets.

## Who Can Use This

- Borrowers who receive change requests and need to update their term sheets
- Facility Agents who request changes to improve term sheet quality

## When This Is Used

Use change requests when:

- Facility agent needs modifications to your term sheet before approval
- You need to update information based on facility agent feedback
- You want to improve your proposal through iterative refinement
- Facility agent identifies issues that need to be addressed
- Terms need adjustment to meet requirements or improve feasibility

## Step-by-Step Process

### Receiving a Change Request

#### 1. Receive Notification

- You receive notification that a change request has been made

- Notification includes details about what needs to change
- Term sheet status changes to "CHANGES\_REQUESTED"
- You can view the change request details

## 2. Review Change Request Details

- Navigate to your term sheet
- Open the change request section
- Read change request details carefully
- Understand what specific modifications are needed
- Note any deadlines or priorities mentioned
- Check if re-signing is required after changes

## 3. Understand Requirements

- Identify all requested changes
- Clarify any unclear items (contact facility agent if needed)
- Determine what fields need updating
- Identify what documents need updating (if any)
- Prioritize changes if multiple items are requested
- Understand the reason for each change

## Making Changes

### 1. Access Term Sheet for Editing

- Navigate to your term sheet
- Status shows "CHANGES\_REQUESTED" which allows editing
- Click to edit the term sheet
- Editing interface opens

### 2. Make Requested Modifications

- Update facility name if requested
- Adjust maximum facility amount if needed
- Modify interest rate or rate structure if requested
- Update repayment terms if changes are needed

- Adjust facility term or duration if requested
- Update purpose or other terms as requested
- Modify any other fields that need changes

### 3. **Update Documents if Required**

- Replace or update supporting documents if requested
- Upload new documents if additional documentation is needed
- Ensure documents meet quality and format requirements
- Verify all required documents are still included

### 4. **Review Your Changes**

- Verify all requested changes are addressed
- Check that information is accurate and complete
- Ensure documents are current and correct
- Review terms to ensure they're still reasonable
- Make sure nothing was accidentally removed or changed incorrectly

### 5. **Save Your Changes**

- Save your progress (you can save multiple times)
- Status remains "CHANGES\_REQUESTED" while you work
- You can return later to complete changes if needed
- Changes are saved and preserved

## **Re-signing if Required**

### 1. **Determine if Re-signing Is Needed**

- Check if key terms changed (amount, interest rate, repayment terms, etc.)
- Review change request to see if re-signing is mentioned
- Understand that significant changes typically require re-signing

### 2. **Complete Electronic Signature Again**

- If re-signing is required, initiate the signature process
- Review the updated document you're signing
- Complete the electronic signature

- Verify signature is complete and correct

### 3. **Verify Signed Version**

- Review the signed version
- Ensure all changes are reflected correctly
- Verify signature is legally binding
- Confirm everything is accurate

## **Resubmitting for Review**

### 1. **Prepare for Resubmission**

- Ensure all requested changes are complete
- Verify all required fields are filled
- Check that signing is complete (if required)
- Review everything one final time
- Confirm you're ready to resubmit

### 2. **Resubmit for Facility Agent Review**

- Click "Resubmit" or "Submit for Review" button
- Confirm the resubmission action
- Status changes back to "FAReview"
- Facility agent receives notification

### 3. **Wait for Review Again**

- Facility agent reviews your updated term sheet
- Review typically takes a few days
- You receive notifications about status changes
- You can monitor review progress

### 4. **Handle Subsequent Decisions**

- **If Approved:** Term sheet is approved, master commitment is automatically created
- **If Rejected:** Term sheet is rejected, you must create a new one
- **If More Changes Requested:** Process repeats - you make changes and resubmit again

## Rules & Validations

- You can only edit term sheets when status is "CHANGES\_REQUESTED". Once resubmitted, editing is restricted until another change request is made.
- Status remains "CHANGES\_REQUESTED" while you work on changes. It doesn't change until you resubmit.
- You must address all requested changes before resubmitting. Incomplete changes may result in another change request.
- Re-signing may be required if documents or key terms changed. Significant changes typically require a new signature.
- You can go through multiple rounds of changes. The process can repeat until approved or rejected.
- You can save multiple times while working. Your progress is saved, and you can return later to complete changes.
- Change requests are less severe than rejection. You can update and resubmit without creating a new term sheet.
- All changes are recorded. Every edit and resubmission is tracked in the audit trail.
- Facility agents can request changes multiple times. You may go through several rounds of refinement.
- Status controls what actions are available. You can only edit and resubmit when status allows it.

## What Happens Next

After receiving a change request:

- You can edit the term sheet to make requested changes
- You can save multiple times while working on changes
- You resubmit when changes are complete
- Facility agent reviews again and can approve, reject, or request more changes
- Process can repeat until approved or rejected

After resubmitting:

- Facility agent reviews your updated term sheet
- Facility agent makes a new decision (approve, reject, or request more changes)
- If approved, master commitment is automatically created
- If rejected, you must create a new term sheet
- If more changes are requested, the process repeats

Understanding term sheet change requests helps you effectively respond to facility agent feedback, refine your proposals through iterative improvement, and successfully move from change requests to approval.

# Master Commitment Overview

Learn what master commitments are and how they work

## Overview

A master commitment is the finalized credit facility agreement that defines the complete facility structure. It's automatically created when a term sheet is approved and contains all the rules, parameters, lender information, borrowing base calculations, and other configurations needed to operate the facility. Master commitments serve as the foundation for all facility operations.

## What Master Commitments Are

A master commitment is the complete, finalized agreement that defines how a credit facility will operate. It's like the rulebook for the facility—it contains all the terms, rules, calculations, and configurations that govern every aspect of facility operations. When you have an active master commitment, you have a fully configured facility ready for use.

Master commitments are automatically created from approved term sheets, so you don't need to create them manually. They start with information from your term sheet, then facility agents configure the complete structure including all rules, calculations, and lender groups. Once configured and approved by lenders, master commitments become active and enable funding requests.

## Purpose and Use Cases

Master commitments serve as the operational foundation for credit facilities:

**For Facility Structure** - Master commitments define the complete facility structure, including all rules, parameters, and configurations needed to operate the facility. They serve as the single source of truth for how facilities work.

**For Rule Definition** - All facility rules are defined in master commitments, including borrowing limits, collateral eligibility, drawdown frequency, repayment terms, and other requirements. These rules govern all facility operations.

**For Lender Configuration** - Master commitments configure lender groups, participation percentages, voting rights, and other lender-specific settings. This determines how lenders participate in the facility.

**For Borrowing Base Setup** - Borrowing base calculations are configured in master commitments, determining how much borrowers can borrow based on collateral, financial metrics, or other factors.

**For Facility Activation** - Master commitments must be approved by lenders before facilities become active. Once approved, facilities are operational and borrowers can create funding requests.

**For Operational Reference** - Master commitments serve as complete documentation of facility structure and rules, ensuring all parties understand how facilities operate and what rules apply.

## Key Components

**Facility Terms** - Basic facility information from the approved term sheet, including facility name, maximum facility amount, interest rates, repayment terms, and facility term. This information is pre-populated from the term sheet.

**Facility Rules** - Rules that govern how the facility operates, including borrowing limits, drawdown frequency rules, utilization limits, payment terms, interest rate structure, and fee calculations. These rules control all facility operations.

**Borrowing Base Calculations** - Formulas and rules that determine how much borrowers can borrow. This includes calculation methods, advance rates, collateral eligibility rules, and borrowing limits. Borrowing base calculations determine available borrowing capacity.

**Collateral Eligibility Rules** - Criteria that define what assets can be used as collateral and how they're valued. This includes collateral type requirements, quality standards, age limits, geographic limits, and valuation methods.

**Lender Groups** - Configuration of lenders who will participate in the facility, including their participation percentages, commitment amounts, voting rights, and roles. Each lender's participation is tracked individually.

**Operational Parameters** - Other settings needed to operate the facility, including reporting requirements, monitoring requirements, covenant templates, and other operational configurations.

## How Master Commitments Work

**Automatic Creation** - Master commitments are automatically created when term sheets are approved. The system takes information from your approved term sheet and pre-populates the master commitment, ensuring continuity from proposal to facility.

**Facility Agent Configuration** - Facility agents configure the complete facility structure by setting up facility rules, borrowing base calculations, collateral eligibility rules, lender groups, and other parameters. This configuration happens while the master commitment is in Draft status.

Create Master Commitment Modal - Scroll State B

**Collateral Eligibility Configuration** - Facility agents configure collateral eligibility rules that define what assets can be used as collateral and how they're valued. This ensures proper collateral management throughout the facility lifecycle.

Create Master Commitment - Configure Collateral Eligibility Rules Modal

**Lender Approval** - After configuration, facility agents submit master commitments for lender approval. Lenders review the complete facility structure and approve or reject. Any lender approval activates the facility.

Lender Approval - Master Commitment

**Facility Activation** - Once at least one lender approves, the master commitment becomes Active, and the facility is operational. Borrowers can create funding requests, and the facility is ready for use.

**Ongoing Operations** - Active master commitments govern all facility operations. All funding requests must comply with facility rules defined in the master commitment. Borrowing capacity is calculated based on borrowing base rules, and all operations follow the configured structure.

**Rule Enforcement** - All facility rules defined in master commitments are enforced throughout the facility lifecycle. Funding requests are evaluated against these rules, borrowing capacity is calculated using configured formulas, and all operations must comply with the defined structure.

## Important Points to Know

**Automatic Creation** - Master commitments are automatically created when term sheets are approved. You don't need to create them manually—the system creates them with pre-populated term sheet data, ensuring continuity.

**Facility Agent Configuration Required** - Facility agents must configure the complete facility structure before submitting for lender approval. This includes setting up all rules, calculations, and lender groups. Configuration must be complete before submission.

**Lender Approval Activates Facility** - Master commitments must be approved by at least one lender before facilities become active. Any lender approval activates the facility—you don't need all lenders to approve. Once active, borrowers can create funding requests.

**Defines All Facility Rules** - All rules that govern the facility are defined in the master commitment, including borrowing limits, collateral eligibility, drawdown frequency, and other requirements. Understanding these rules helps you use the facility effectively.

**Becomes Active When Approved** - Once at least one lender approves, the facility becomes active, and borrowers can create funding requests. The facility remains active until it expires, is closed, or is terminated.

**Complete Documentation** - Master commitments serve as complete documentation of facility structure and rules, ensuring all parties understand how facilities operate. All facility activities reference the master commitment structure.

**Cannot Edit After Active** - Once a facility is active, the master commitment typically cannot be edited. All facility rules and configurations are locked in. Make sure configuration is correct before submission.

Understanding master commitments helps you appreciate how term sheets become operational facilities, know what facility agents configure, understand when facilities become active, work effectively within facility structures and rules, and know how facility operations are governed throughout the facility lifecycle.

# Master Commitment Statuses

Understand the different statuses master commitments go through

## Overview

Master commitments progress through three main statuses from creation to activation. Understanding these statuses helps you know where your facility is in the setup process, what actions are available, and what needs to happen next. Each status represents a specific stage in the facility setup and activation workflow, and understanding them helps you navigate the facility creation process effectively.

## Lifecycle Overview

Master commitments are automatically created when term sheets are approved, starting in **Draft** status where facility agents configure the complete facility structure. They progress to **Pending Lender Approval** when facility agents complete configuration and submit for lender review. Finally, they reach **Active** status when at least one lender approves the facility, making it operational for funding requests.

The lifecycle is designed to support facility setup—facility agents configure all rules and parameters, lenders review and approve, and once active, borrowers can create funding requests. Each stage has specific purposes and allows different types of actions, ensuring that facilities are properly configured and authorized before becoming operational. Understanding this lifecycle helps you know what to expect and how to navigate the facility setup process.

## Status Meanings

**Draft** - The master commitment has been automatically created from an approved term sheet, and the facility agent is configuring it. All fields can be edited, and the facility is not yet submitted for lender approval. Master commitments in Draft status are being configured and are not yet ready for lender review.

**Pending Lender Approval** - The facility agent has completed configuration and submitted the master commitment for lender approval. The facility is waiting for at least one lender to approve it. Master commitments in Pending Lender Approval status are ready for lender review and decision.

**Active** - At least one lender has approved the master commitment, and the facility is operational. Borrowers can create funding requests, and the facility is fully functional. Master commitments in Active status are operational and ready for use.

## What Each Status Indicates

**Draft Status** indicates that the facility agent is still configuring the master commitment. Facility agents can edit all fields, set up facility rules, configure borrowing base calculations, and add lender groups. Borrowers can view the configuration but cannot create funding requests yet. This status tells you that facility setup is in progress and not yet ready for lender review. You can work on configuration, save progress multiple times, and complete all required setup before submission.

**Pending Lender Approval Status** indicates that configuration is complete and the facility is waiting for lender approval. Facility agents can view but cannot edit. Borrowers can monitor approval progress but cannot create funding requests yet. Lenders can review the complete facility structure and approve or reject. This status tells you that the facility is ready for lender decision and waiting for approval to activate. Once at least one lender approves, the facility becomes Active.

**Active Status** indicates that the facility is operational and ready for use. Borrowers can create funding requests, facility agents can review requests, and lenders can approve funding notices. The facility is fully functional, and all parties can participate in funding operations. This status tells you that the facility is live and operational for drawdowns. All facility rules and configurations are active and enforced.

Understanding master commitment statuses helps you track facility setup progress, know what actions are available at each stage, understand why certain actions are disabled, know when facilities become active and operational, and navigate the facility setup process effectively.

# Facility Setup Status

Understand how facility setup status tracks configuration completion

## Overview

The facility setup status tracks whether a master commitment has been fully configured and is ready for lender approval. This status helps facility agents know what still needs to be completed before submitting the facility, ensuring all required fields and configurations are in place. It's separate from the master commitment workflow status and focuses specifically on configuration completeness, guiding facility agents through the setup process.

## Lifecycle Overview

Facility setup status starts as **In Progress** when the master commitment is first created and facility agents begin configuration. It remains In Progress while facility agents work on setting up facility rules, borrowing base calculations, lender groups, and other required configurations. Once all required fields are filled and validations pass, the status changes to **Completed**, indicating the facility is ready for submission to lenders.

The setup status is designed to guide facility agents through the configuration process, showing what's incomplete and preventing submission until everything is ready. This ensures that facilities are fully configured before they're submitted for lender approval, maintaining quality and completeness. Understanding this status helps facility agents track their progress and know when setup is complete.

## Status Meanings

**In Progress** - The facility agent is still configuring the master commitment. Some required fields or configurations are incomplete, and the facility is not ready for submission. Setup status shows In Progress when configuration work is ongoing.

**Completed** - All required fields and configurations are complete, validation passes, and the master commitment is ready for lender approval. Setup status shows Completed when all requirements are met and the facility can be submitted.

## What Each Status Indicates

**In Progress Status** indicates that configuration work is still ongoing. Required fields may be empty, facility rules may need setup, borrowing base calculations may need configuration, or lender groups may need to be added. Facility agents can continue working, save progress multiple times, and complete configurations. This status tells you that setup is not yet complete and submission is not yet possible. You need to complete all required configurations before the status changes to Completed.

**Completed Status** indicates that all required configurations are finished and validations have passed. All required fields are filled, facility rules are configured, borrowing base calculations are set up, lender groups are added, and the facility is ready for lender approval. Facility agents can submit for lender approval, and the master commitment can progress to Pending Lender Approval status. This status tells you that setup is complete and the facility is ready for the next stage. You can proceed with submission knowing that all requirements are met.

Understanding facility setup status helps facility agents track their configuration progress, know what still needs to be completed, verify when setup is ready for submission, ensure all required fields and configurations are in place before submitting for lender approval, and work efficiently through the facility configuration process.

# Funding Requests Overview

Learn what funding requests are and how to create them

## Overview

A funding request is when a borrower requests to draw down funds from an active credit facility. Each request specifies the amount needed, the purpose, includes supporting documentation, and must be reviewed and approved by the facility agent before funds can be disbursed. Funding requests allow borrowers to access their approved facility limit flexibly, drawing down funds as needed rather than receiving everything upfront.

## What Funding Requests Are

A funding request is a specific request to borrow a portion of your approved facility limit. Think of it as asking to withdraw money from your line of credit—you specify how much you need, what you'll use it for, and provide documentation to support your request. Each funding request is reviewed individually by facility agents to ensure it complies with facility rules and that sufficient borrowing capacity is available.

Funding requests are separate from the facility itself—you can create multiple funding requests over time as long as you stay within your facility limits. Each request goes through its own review and approval process, and approved requests trigger the creation of funding notices that are sent to lenders for their review and approval.

## Purpose and Use Cases

Funding requests enable flexible access to approved facility limits:

**For Incremental Borrowing** - You can request specific amounts as needed rather than borrowing the full facility limit at once. This provides flexibility to borrow only what's needed when it's needed.

**For Purpose-Specific Drawdowns** - Each request specifies the purpose of the funds, allowing you to request funds for specific business needs. Facility agents and lenders can evaluate each drawdown based on its purpose.

**For Ongoing Capital Access** - You can create multiple funding requests over time, providing ongoing access to capital throughout the facility term. This supports businesses with varying capital needs.

**For Controlled Disbursement** - Each drawdown is reviewed individually, ensuring proper oversight and compliance with facility rules. This protects both borrowers and lenders.

**For Capacity Management** - Funding requests are evaluated against available borrowing capacity, ensuring you stay within approved limits. The system tracks utilization and available capacity.

**For Documentation** - Each request includes supporting documentation, providing transparency and justification for fund usage. This documentation supports the review process and maintains proper records.

## Key Components

**Request Amount** - The specific amount you want to borrow. This must be within your available borrowing capacity, which is calculated based on facility rules and current utilization. You can request any amount up to your available capacity.

**Purpose** - A detailed description of what the funds will be used for. This helps facility agents and lenders understand how funds will be used and evaluate the request appropriately.

**Funding Date** - When you need the funds. This helps coordinate timing and ensures funds are available when needed.

**Supporting Documentation** - Documents that justify the request and demonstrate compliance with facility rules. This may include financial statements, business plans, or other required documentation.

**Collateral Information** - If the facility requires collateral, you specify which loans or assets will be used. This includes collateral details, descriptions, and valuations if required.

**Status** - The current stage of the request in its workflow, such as DRAFT, FARReview, APPROVED, REJECTED, or CHANGES\_REQUESTED. Status determines what actions are available and what needs to happen next.

## How Funding Requests Work

**Creation** - You create funding requests against active facilities by specifying the amount, purpose, funding date, and uploading supporting documentation. Requests start in DRAFT status, allowing you to work on them before submission.

The screenshot displays the 'Funding Request' creation interface. The background shows a 'CREDIT FACILITY' overview with a table of facilities. The modal form is titled 'Funding Request' and contains the following sections:

- Request Information**
  - Master Commitment ID: MC-10162025-5s8n
  - Funding Request ID: FR-12052025-mjmx
  - Draw Amount (USD)\*: Type here
  - Funding Date\*: Select Date
  - Purpose of Funds\*: Select any one
  - Draw Currency: USD
- Collateral Information**
  - Upload Collateral Addendum: Choose file (No file chosen)
  - Estimated Collateral Value: (Empty field)
  - Auto-calculated based on uploaded collateral and eligibility

At the bottom of the modal are 'Cancel' and 'Review' buttons. The background interface includes a sidebar with navigation icons, a 'Term Sheet Set-up' dropdown, and a table of facilities with columns for Facility Name, Stage, and Actions.

Funding Request Creation - Issuer

**Submission** - When ready, you submit funding requests to facility agents for review. Status changes to FARReview, and facility agents evaluate the request for compliance with facility rules and available borrowing capacity.

**CREDIT FACILITY**

Review Funding Request - FA Review

**Approval Outcomes** - When approved, funding notices are automatically created. When rejected, you receive a reason and can create new requests. When changes are requested, you can update and resubmit.

**Funding Notice Generation** - Approved requests automatically trigger funding notice creation. Funding notices document the approved drawdown and are sent to lenders for review. Tokens are generated, and the drawdown process proceeds.

**Lender Review** - Lenders review funding notices and approve or reject individual drawdowns. Each lender makes independent decisions, and participation is tracked individually.

**Fund Disbursement** - After lender approval, funds are transferred to borrowers. Lenders confirm transfers, completing the drawdown process.

## Important Points to Know

**Flexible Drawdowns** - You can request any amount up to your available borrowing capacity, not necessarily the full facility limit. This provides flexibility to borrow as needed while staying within limits.

**Individual Review** - Each funding request is reviewed individually by facility agents to ensure compliance with facility rules and available borrowing capacity. Review ensures proper oversight and compliance.

**Automatic Notice Generation** - When approved, funding notices are automatically generated and sent to lenders for review and approval. You don't need to create notices manually—the system handles this automatically.

**Multiple Requests Over Time** - You can create multiple funding requests over time as long as you stay within your facility limits and available borrowing capacity. This provides ongoing access to capital throughout the facility term.

**Three Possible Outcomes** - Facility agents can approve requests (creating funding notices), reject requests (requiring new requests), or request changes (allowing updates and resubmission). Understanding these outcomes helps you know what to expect.

**Complete Documentation** - All funding requests are documented with complete details, supporting documentation, and audit trails, ensuring transparency and supporting compliance. Every request, approval, and status change is recorded.

**Status Tracks Progress** - Request status shows where each request is in its workflow, from creation through review to approval or rejection. Understanding status helps you track progress and know what to expect.

Understanding funding requests helps you effectively request drawdowns from active facilities, provide proper documentation, track request status, respond to feedback, access funds flexibly, and work within facility rules and borrowing capacity limits throughout the facility lifecycle.

# Funding Request Review

Learn how facility agents review funding requests and make approval decisions

## Overview

Funding request review is the process where facility agents evaluate borrower funding requests to ensure they comply with facility rules, have sufficient borrowing capacity, meet all requirements, and are properly documented before approval. This review process ensures proper oversight and control over fund disbursement while maintaining facility integrity.

## Who Can Use This

- Facility Agents who review funding requests and make approval decisions
- Borrowers who want to understand how their requests are evaluated

## When This Is Used

Use funding request review when:

- Borrowers submit funding requests against active facilities
- You need to evaluate requests for compliance with facility rules
- You want to approve or reject drawdowns based on evaluation
- You need to ensure facility rules are followed
- You want to verify borrowing capacity and documentation

## Review Process

**Accessing Requests** - When borrowers submit funding requests, they appear in your review queue. You can access requests through notifications or by navigating to the funding requests section. Each request shows the borrower, facility, amount, purpose, and current status.

**Review Interface** - The review interface provides a comprehensive view of the funding request, including all details, documentation, and facility context. You can review the complete request information to make informed decisions.

Request Info

Reject

Approve & E-Sign

## Review Funding Request - Review

**E-Signature Process** - When approving funding requests, you may need to complete e-signature requirements. The system guides you through the signing process to ensure proper documentation.

Review Funding Request - E-Sign

**Reviewing Request Details** - Open each request to review complete information including request amount, purpose, funding date, supporting documentation, collateral information (if applicable), and facility context. Review all information provided by the borrower to understand the full request.

**Checking Facility Context** - Review which facility the request is against, view facility rules and parameters, check borrower's borrowing history, verify available borrowing capacity, and understand request timing and frequency. This context helps you evaluate requests appropriately.

**Documentation Review** - Check that all required documents are provided, verify document quality and completeness, ensure documents are readable and properly formatted, verify documents support the request, and assess documentation quality and accuracy.

**Making Evaluation** - Evaluate all factors including compliance with facility rules, borrowing capacity availability, documentation quality and completeness, collateral (if applicable), and borrower's history and performance. Consider all aspects before making decisions.

## Evaluation Criteria

**Facility Rules Compliance** - Verify request amount is within facility limits, check if request complies with borrowing base calculations, verify drawdown frequency rules are followed, ensure request meets all facility-specific requirements, and check if any facility restrictions apply.

**Borrowing Capacity Verification** - Calculate available borrowing capacity, check if request amount exceeds available capacity, review current facility utilization, verify borrower hasn't exceeded limits, and ensure sufficient capacity exists for the request.

**Request Amount Assessment** - Verify amount is reasonable and justified, check if amount aligns with stated purpose, ensure amount doesn't violate facility rules, and verify amount is within approved facility limit.

**Documentation Quality** - Check all required documents are provided, verify document quality and completeness, ensure documents support the request, verify documents meet facility requirements, and assess documentation accuracy and relevance.

**Collateral Evaluation** (if applicable) - Verify collateral eligibility criteria are met, check collateral type is allowed, ensure collateral quality standards are met, review collateral valuation for accuracy, confirm collateral is available and not already pledged, and check collateral concentration is within limits.

**Overall Request Quality** - Assess whether request is well-justified, evaluate if purpose is appropriate, check if timing is reasonable, verify borrower's track record, and consider facility utilization impact.

## Making Decisions

**Approve Request** - Approve when all requirements are met: request meets facility rules, sufficient borrowing capacity available, documentation is complete and adequate, collateral is acceptable (if applicable), and no compliance issues identified. When approved, funding notice is automatically created, status changes to APPROVED, and borrower receives notification.

**Reject Request** - Reject when requirements are not met: request violates facility rules, insufficient borrowing capacity, incomplete or inadequate documentation, collateral issues (if applicable), or other compliance problems. Provide detailed rejection reason, status changes to REJECTED, borrower receives notification with reason, and borrower can create new request.

**Request Changes** - Request changes when improvements are needed: minor issues that can be addressed, additional documentation needed, clarifications required, or modifications needed to meet requirements. Provide specific change request details, status changes to CHANGES\_REQUESTED, borrower can update and resubmit, and process can repeat until approved or rejected.

**Decision Documentation** - Enter approval notes if approving, provide rejection reason if rejecting, specify change request details if requesting changes, include any relevant comments or explanations, and ensure all decisions are properly documented for audit purposes.

## Rules & Validations

- Requests must comply with all facility rules. Any violation results in rejection or change request.
- Request amount cannot exceed available borrowing capacity. Capacity is calculated based on facility rules and current utilization.
- All required documentation must be provided. Missing or inadequate documentation results in rejection or change request.
- Collateral must meet eligibility criteria if applicable. Ineligible collateral results in rejection or change request.
- Approved requests automatically generate funding notices. You don't need to create notices manually.

- Rejected requests cannot be resubmitted. Borrowers must create new requests if rejected.
- Change requests allow editing and resubmission. Borrowers can update requests and resubmit without creating new ones.
- Decisions are final once submitted. You cannot easily reverse decisions after submission.
- All reviews are recorded. Every decision, reason, and action is tracked in the audit trail.
- Status controls workflow. Request status determines what actions are available and what happens next.

## What Happens Next

After reviewing a funding request:

- **If Approved:** Funding notice is automatically created with PENDING\_TOKEN\_GENERATION status, notice is sent to lenders for review, borrower is notified of approval, and you proceed with token generation and signing.
- **If Rejected:** Borrower receives rejection reason, borrower can create new request addressing issues, new request goes through same review process, and process can start over with improvements.
- **If Changes Requested:** Borrower receives change request details, borrower can update request with requested changes, borrower resubmits for your review, you review again and make new decision, and process can repeat until approved or rejected.

After approval:

- Funding notice is generated automatically
- You generate tokens and configure distribution
- You sign funding notice for each lender
- Borrower approves token transfer
- Funding notice becomes visible to lenders
- Lenders review and approve drawdowns

- After lender approval, funds are transferred
- Borrower receives the funds

Understanding funding request review helps facility agents effectively evaluate requests, ensure facility rules are followed, maintain proper oversight, and make informed approval decisions that protect facility integrity while serving borrower needs.

# Funding Request Outcomes

Understand what happens after your funding request is reviewed

## Overview

When a facility agent reviews a funding request, there are three possible outcomes: Approval, Rejection, or Changes Requested. Understanding these outcomes helps borrowers know what to expect, how to proceed, and what happens next in the funding process. Each outcome has different implications for your workflow and next steps, and understanding them helps you navigate the funding request process effectively.

## Possible Outcomes

After you submit a funding request, the facility agent reviews it and makes a decision. There are three possible outcomes: **Approved** - your request meets all requirements and is approved, **Rejected** - your request doesn't meet requirements and is declined, or **Changes Requested** - your request needs modifications before it can be approved. Understanding these outcomes helps you know what to expect and how to proceed.

## What Each Outcome Means

**Approved Outcome** means your funding request meets all requirements, and the facility agent has approved it. A funding notice is automatically created, request status changes to "APPROVED," the funding notice is sent to lenders for review, and you receive notification of approval. You can monitor funding notice progress, approve token transfer when ready, wait for lender approval, and track status updates. After approval, lenders review the funding notice, lenders approve or reject the drawdown, and after lender approval, funds are transferred to you. This outcome means your request has been accepted and the drawdown process can proceed.

**Rejected Outcome** means your funding request doesn't meet requirements, and the facility agent has rejected it. Request status changes to "REJECTED," a rejection reason is provided, you receive notification of rejection, and no funding notice is created. You can review the rejection reason carefully, understand why it was rejected, address issues if possible, and create a new funding request with corrections. You cannot resubmit the same request—you must create a new funding request if you want to try again, and the new request should address the rejection reasons. This outcome means your request has been declined and cannot proceed further.

**Changes Requested Outcome** means the facility agent needs modifications before approval. Request status changes to "CHANGES\_REQUESTED," the request becomes editable again, you can make modifications, and you can resubmit when changes are complete. You should read the change request carefully, understand what specific modifications are needed, make all requested changes thoroughly, address all requested items, review your changes before resubmitting, and resubmit when complete. After making changes and resubmitting, the request goes back to FAREview status for another review. This outcome means your request needs improvements but can proceed after changes are made.

## Next Steps for Users

**If Your Request Is Approved** - Monitor the funding notice progress as it moves through lender review. Approve token transfer when ready if required. Wait for lender approval and track status updates. Prepare to receive funds after lender approval and fund transfer confirmation. Track the funding notice through token generation, borrower approval, lender review, and fund transfer. Ensure you're ready to receive funds when lenders confirm transfers.

**If Your Request Is Rejected** - Review the rejection reason carefully to understand why it was rejected. Address the issues identified in the rejection reason. Create a new funding request that addresses all rejection reasons. Ensure the new request complies with facility rules and has sufficient documentation. Submit the new request and go through the review process again. Learn from the rejection to improve future requests.

**If Changes Are Requested** - Read the change request carefully to understand what modifications are needed. Make all requested changes thoroughly and address all requested items. Review your changes before resubmitting to ensure everything is complete. Resubmit the request when changes are complete, and it will go back to facility agent review. Be thorough in addressing all requested changes to avoid additional change requests.

Understanding funding request outcomes helps you know what to expect after submission, understand how to proceed based on the outcome, take appropriate next steps to move your funding request forward, and work effectively within the funding request process.

# Funding Notices Overview

Learn what funding notices are and how they work

## Overview

A funding notice is the official documentation for each drawdown from a credit facility. It's automatically generated when a funding request is approved by the facility agent and contains all the details needed for the drawdown, including token distribution to lenders, drawdown amounts, and fund transfer instructions. Funding notices serve as the bridge between approved funding requests and actual fund disbursement.

## What Funding Notices Are

A funding notice is the formal document that represents an approved drawdown from a credit facility. Think of it as the official paperwork for withdrawing funds—it documents the approved amount, how it will be distributed to lenders, and provides instructions for fund transfer. Funding notices are automatically created when facility agents approve funding requests, so you don't need to create them manually.

Funding notices contain all the information needed to complete the drawdown process. They include the approved amount, purpose, funding date, token distribution to lenders, and other details. Once created, funding notices go through token generation, borrower approval, lender review, and fund transfer confirmation before funds are disbursed.

## Purpose and Use Cases

Funding notices serve several important purposes:

**For Drawdown Documentation** - Funding notices provide complete documentation of approved drawdowns, ensuring all parties have proper records. They serve as official documentation for audit and compliance purposes.

**For Token Distribution** - Funding notices facilitate token generation and distribution to lenders. Tokens represent drawdown amounts and enable tracking of lender participation and fund transfers.

**For Lender Coordination** - Funding notices coordinate lender participation by showing each lender their allocated portion and enabling individual lender decisions. Each lender can approve or reject their participation independently.

**For Fund Transfer Process** - Funding notices provide instructions and documentation for the fund transfer process. They enable lenders to understand their obligations and confirm transfers.

**For Process Tracking** - Funding notices track the complete drawdown process from approval through fund disbursement. Status shows where each notice is in the process and what needs to happen next.

**For Audit and Compliance** - Funding notices provide complete audit trails of drawdowns, including approvals, token generation, lender decisions, and fund transfers. This supports compliance and accountability.

## Key Components

**Approved Drawdown Details** - Information from the approved funding request, including request amount, purpose, funding date, and facility details. This information is pre-populated from the approved request.

**Token Distribution** - Configuration of how tokens are distributed to lenders based on their participation percentages in the facility. Each lender receives their allocated portion, clearly showing their contribution amount.

**Token Status** - Status of token generation and distribution, such as PENDING\_TOKEN\_GENERATION, TOKEN\_GENERATED, or TOKEN\_APPROVED. Status tracks where tokens are in the generation and approval process.

**Per-Lender E-Signature Status** - Individual tracking of facility agent's e-signature status for each lender. Facility agents sign funding notices for each lender individually, with each lender's signature status tracked separately.

**Lender Approval Status** - Individual tracking of each lender's approval or rejection decision. Each lender can approve or reject their participation independently, and decisions are tracked separately.

**Fund Transfer Confirmation** - Tracking of lender fund transfer confirmations. Lenders confirm when they've transferred funds, completing their participation in the drawdown.

**Borrowing Base Impact** - Information about how the drawdown affects borrowing base and available capacity. This helps all parties understand facility utilization and remaining capacity.

## How Funding Notices Work

**Automatic Creation** - Funding notices are automatically created when funding requests are approved. The system takes information from approved requests and creates funding notices with PENDING\_TOKEN\_GENERATION status, ready for token generation.

**Token Generation** - Facility agents generate tokens for the drawdown and configure distribution to lenders. Tokens represent the drawdown amount and are allocated to lenders based on their participation percentages. Status changes to TOKEN\_GENERATED.

Lender Approval - Funding Notice

**Fund Transfer Confirmation** - After approving, lenders transfer funds and confirm transfers. Each lender confirms their transfer independently, completing their participation in the drawdown.

![Fund Transfer Confirmation](imagesByMdFilesFolder/24/Fund Transfer Confirmation.png)

**Process Completion** - Once lenders confirm transfers, the drawdown process is complete. Funds have been disbursed, and the drawdown is documented with complete audit trails.

Process Completion

## Important Points to Know

**Automatic Creation** - Funding notices are automatically created when funding requests are approved. You don't need to create them manually—the system creates them with pre-populated request data, ensuring consistency and completeness.

**Token Generation Required** - Facility agents must generate tokens and configure distribution before borrowers can approve transfers. Tokens represent drawdown amounts and enable tracking and distribution to lenders.

**Borrower Approval Required** - Borrowers must approve token transfers before funding notices become visible to lenders. This ensures borrowers verify allocations before proceeding and enables lender review.

**Individual Lender Tracking** - Each lender's participation is tracked individually, allowing for independent decisions and flexible participation. Lenders can approve or reject based on their own criteria.

**Per-Lender E-Signature** - Facility agents sign funding notices for each lender individually, with each lender's signature status tracked separately. This ensures proper documentation for each lender's participation.

**Complete Documentation** - Funding notices serve as complete documentation of drawdowns, ensuring all parties have proper records. All actions, approvals, and transfers are documented with complete audit trails.

**Status Tracks Process** - Funding notice status shows where each notice is in the drawdown process, from creation through token generation, borrower approval, lender review, and fund transfer. Understanding status helps you track progress.

Understanding funding notices helps you appreciate how approved funding requests become documented drawdowns, know what happens during token generation and distribution, understand when notices become visible to lenders, track the drawdown process through to fund disbursement, and understand how individual lender participation is coordinated and tracked.

# Token Generation and Issuance

Understand how tokens are generated and distributed for funding notices

## Overview

Token generation and issuance is the complete workflow for creating and distributing tokens that represent drawdown amounts in funding notices. These tokens serve as digital representations of the drawdown that enable tracking, distribution, and management of funds across multiple lenders. Understanding this workflow helps you navigate the token-based drawdown process from creation through distribution to lender visibility.

## Workflow Overview

The token generation and issuance workflow begins when a funding request is approved and a funding notice is automatically created. Facility agents generate tokens representing the drawdown amount, configure distribution to lenders based on their participation percentages, and sign funding notices. Borrowers then approve token transfers, making funding notices visible to lenders who can review and approve their participation. The workflow ensures proper documentation, tracking, and coordination throughout the drawdown process.

## Key Stages

**Stage 1: Funding Notice Creation** - When a funding request is approved, a funding notice is automatically created with PENDING\_TOKEN\_GENERATION status. The notice contains all information from the approved request and is ready for token generation.

**Stage 2: Token Generation** - Facility agents generate tokens for the borrower, representing the total drawdown amount. Tokens are created digitally and linked to the funding notice. The system updates the funding notice status to TOKEN\_GENERATED.

FA - Funding Notice Save - Token Generation

**Stage 3: Token Distribution Configuration** - Facility agents configure how tokens are distributed to lenders based on their participation percentages in the facility. Each lender's allocation is calculated automatically, showing their portion of the drawdown. Distribution is set up in the tokenDistribution array.

The screenshot shows the 'View Funding Notice' modal in the Facility Operations app. The modal is titled 'View Funding Notice' and has a 'Close' button in the top right corner. It contains a 'Notice Summary' section with the following fields:

- Notice ID: FN-20251204-2wpwsj
- Funding Request ID: FR-12012025-e1ap
- Requested Amount: 450,000.00
- Requested Date: 10/31/2025

Below the summary is a 'Token Distribution' section with a table:

| Facility       | Lender        | Amount     | Status  |
|----------------|---------------|------------|---------|
| Demo Credit Fa | Lender Demo 1 | 450,000.00 | PENDING |

The modal also has a 'Close' button at the bottom right.

### Funding Notice Details - FA

**Stage 4: Per-Lender E-Signature** - Facility agents sign funding notices for each lender individually. Each lender's signature status is tracked separately in the tokenDistribution array. The system tracks overall completion, and status remains TOKEN\_GENERATED during this process.

**Stage 5: Borrower Token Approval** - Borrowers review the token allocation to verify amounts and distribution are correct. Once verified, borrowers approve the token transfer, which changes the funding notice status to `TOKEN_APPROVED` and makes the notice visible to lenders.

Issuer - Token Approval

**Stage 6: Lender Visibility** - After borrower approval, funding notices become visible to lenders. Lenders can see their allocated token portions and review drawdown details. This enables lender review and decision-making.

**Stage 7: Lender Review and Approval** - Lenders review funding notices and approve or reject their participation. Each lender makes independent decisions, and participation is tracked individually. Lenders can see their allocated portion and make decisions accordingly.

Lender Approval - Funding Notice

**Stage 8: Fund Transfer Confirmation** - After approving, lenders transfer funds and confirm transfers. Each lender confirms their transfer independently, completing their participation in the drawdown. The system tracks individual lender confirmations.

![Fund Transfer Confirmation](imagesByMdFilesFolder/25/Fund Transfer Confirmation.png)

## How the Workflow Progresses

**From Approval to Token Generation** - The workflow starts automatically when funding requests are approved. Facility agents initiate token generation, creating tokens for borrowers and configuring distribution. This stage transforms approved requests into tokenized drawdowns ready for distribution.

**From Token Generation to Borrower Approval** - After tokens are generated and distributed, facility agents sign funding notices for each lender. Once all signatures are complete, borrowers can review and approve token transfers. Borrower approval is required before lenders can see notices.

**From Borrower Approval to Lender Review** - Once borrowers approve token transfers, funding notices become visible to lenders. Lenders can review their allocations and drawdown details, enabling informed decision-making about participation.

**From Lender Review to Fund Transfer** - After lenders review and approve, they transfer funds and confirm transfers. Each lender completes their participation independently, and the system tracks all confirmations. Once all lenders confirm, the drawdown process is complete.

**Status Progression** - The workflow progresses through statuses: PENDING\_TOKEN\_GENERATION → TOKEN\_GENERATED → TOKEN\_APPROVED. Each status represents a specific stage and determines what actions are available. Understanding status helps you know where you are in the process.

**Individual Lender Tracking** - Throughout the workflow, each lender's participation is tracked individually. Token allocations, signature status, approval decisions, and transfer confirmations are all tracked separately, enabling flexible participation and independent decisions.

## Important Points to Know

**Automatic Notice Creation** - Funding notices are automatically created when funding requests are approved. You don't need to create them manually—the system creates them with pre-populated request data, ensuring consistency.

**Token Generation Required** - Facility agents must generate tokens before borrowers can approve transfers. Tokens represent drawdown amounts digitally and enable tracking and distribution to lenders.

**Distribution Based on Participation** - Token distribution is calculated automatically based on lender participation percentages in the facility. Each lender receives their allocated portion, clearly showing their contribution amount.

**Per-Lender E-Signature** - Facility agents sign funding notices for each lender individually, with each lender's signature status tracked separately. This ensures proper documentation for each lender's participation.

**Borrower Approval Required** - Borrowers must approve token transfers before funding notices become visible to lenders. This ensures borrowers verify allocations before proceeding and enables lender review.

**Individual Lender Decisions** - Each lender makes independent decisions about participation. Lenders can approve or reject based on their own criteria, and decisions are tracked separately.

**Complete Documentation** - All token generation, distribution, approvals, and transfers are documented with complete audit trails, ensuring transparency and supporting compliance.

**Status Tracks Progress** - Funding notice status shows where each notice is in the workflow, from token generation through borrower approval to lender review and fund transfer. Understanding status helps you track progress.

Understanding the token generation and issuance workflow helps you navigate the complete process from approved funding requests through token creation, distribution, borrower approval, lender review, and fund transfer, ensuring proper coordination and documentation throughout the drawdown process.

# E-Signature Workflow

Learn how electronic signatures work throughout credit facilities

## Overview

E-signatures are used throughout the credit facility workflow to digitally sign important documents, enabling a complete digital process without paper documents. Electronic signatures are legally binding and provide complete traceability of who signed what and when. Understanding the e-signature workflow helps you navigate the signing process for term sheets, master commitments, and funding notices.

## Workflow Overview

The e-signature workflow spans multiple stages of the credit facility process. Borrowers sign term sheets before submission, lenders sign master commitments to approve facilities, and facility agents sign funding notices for each lender. Each signing stage has specific requirements and outcomes, and signatures are tracked individually with complete audit trails. The workflow ensures proper authorization and documentation at each critical stage.

## Key Stages

**Stage 1: Term Sheet Signing (Borrowers)** - Borrowers electronically sign term sheets before submitting them for facility agent review. Signing is required before submission, and the signature is recorded with timestamp. After signing, term sheets can be submitted, and status updates to BorrowerSigned.

**Stage 2: Master Commitment Signing (Lenders)** - Lenders electronically sign master commitments to approve facilities. Any lender approval activates the facility, and signatures are recorded individually. After signing, facilities become active, and borrowers can create funding requests.

**Stage 3: Funding Notice Signing (Facility Agents)** - Facility agents sign funding notices for each lender individually. Each lender's signature is tracked separately, and the system tracks overall completion. After signing, borrowers can approve token transfers, making notices visible to lenders.

**Stage 4: Signature Verification** - After each signing, signatures are verified and recorded. Signed documents are stored securely, and signature status is visible to all parties. Status updates reflect signature completion.

**Stage 5: Document Progression** - After signatures are complete, documents can progress to next stages. Term sheets can be submitted, master commitments activate facilities, and funding notices become visible to lenders. Signatures enable workflow progression.

## How the Workflow Progresses

**Term Sheet Signing Flow** - Borrowers complete term sheets, then sign electronically. After signing, term sheets can be submitted to facility agents. Facility agents review signed term sheets and make decisions. If approved, master commitments are automatically created.

**Master Commitment Signing Flow** - Facility agents configure master commitments, then submit for lender approval. Lenders review and sign to approve facilities. Any lender signature activates the facility. After activation, borrowers can create funding requests.

**Funding Notice Signing Flow** - After tokens are generated, facility agents sign funding notices for each lender individually. Each lender's signature is tracked separately. After all signatures are complete, borrowers can approve token transfers. Lenders can then review and approve drawdowns.

**Signature Tracking** - Throughout the workflow, signatures are tracked with complete details including who signed, when they signed, and what document was signed. This creates complete audit trails for compliance and accountability.

**Status Updates** - After each signing stage, document status updates to reflect signature completion. Term sheets show BorrowerSigned, master commitments show Active after lender approval, and funding notices track per-lender signature status.

**Document Storage** - All signed documents are stored securely and can be retrieved for audit purposes. Signed versions are preserved, and signature history is maintained for complete traceability.

## Important Points to Know

**Legally Binding** - Electronic signatures are legally binding and enforceable. Once signed, documents are legally valid, and signatures cannot be easily reversed.

**Required Before Progression** - Signatures are required before documents can progress to next stages. Unsigned documents cannot move forward in the workflow, ensuring proper authorization at each stage.

**Multiple Signatures May Be Required** - Some documents require multiple signatures from different parties. Term sheets need borrower signatures, master commitments need lender signatures, and funding notices need facility agent signatures for each lender.

**Tracked with Timestamps** - Every signature is recorded with who signed and when, creating complete audit trails. Signature details are visible to authorized parties and support compliance requirements.

**Stored Securely** - All signed documents are stored securely and can be retrieved for audit purposes. Signed versions are preserved, and signature history is maintained for complete traceability.

**Status Reflects Completion** - Document status updates to reflect signature completion. You can see signature status and completion for all parties, helping you track progress through the workflow.

**Re-signing May Be Required** - If documents are modified significantly, re-signing may be required. This ensures signatures reflect current document content and maintains legal validity.

**Per-Lender Tracking** - For funding notices, facility agents sign for each lender individually, with each lender's signature status tracked separately. This ensures proper documentation for each lender's participation.

**Enables Workflow Progression** - Signatures enable documents to progress through the workflow. Understanding when signatures are required helps you know what needs to happen next.

Understanding the e-signature workflow helps you complete documents digitally, move through the credit facility process efficiently, ensure all required signatures are obtained for legal validity and compliance, and track signature status throughout the workflow.

# Borrower Token Approval

Learn how to approve token transfers for funding notices

## Overview

Borrower token approval is the step where the borrower approves the transfer of tokens, making the funding notice visible to lenders and enabling the drawdown process to proceed. This approval step ensures borrowers verify token allocation before lenders can review and approve drawdowns.

## Who Can Use This

- Borrowers who have funding notices with generated tokens

## When This Is Used

Use token approval when:

- Tokens have been generated for your funding notice by the facility agent
- You want to proceed with the drawdown process
- You need to make the funding notice visible to lenders
- You're ready to enable lender review and approval
- You want to verify token allocation before proceeding

## Step-by-Step Process

### Reviewing Token Allocation

#### 1. Access Your Funding Notice

- Navigate to your funding notices section
- Find the funding notice with generated tokens
- Open the funding notice details

- View token allocation information

## 2. **Review Token Details**

- Check total token amount matches your funding request
- Verify the amount is correct
- Review funding date and purpose
- Confirm facility information is accurate

## 3. **Review Lender Distribution**

- View how tokens are distributed to lenders
- Check each lender's allocation amount
- Verify distribution percentages match facility participation
- Ensure all lenders are included
- Review individual lender allocations

## 4. **Verify Allocation Accuracy**

- Confirm total allocation equals request amount
- Check that lender percentages are correct
- Verify no errors in distribution
- Ensure all information is accurate

# **Approving Token Transfer**

## 1. **Final Review Before Approval**

- Review all token allocation details one final time
- Verify token amounts match your expectations
- Check lender distribution is accurate
- Confirm you're ready to proceed
- Ensure all information is correct

## 2. **Initiate Approval**

- Click the "Approve Token Transfer" button or similar
- Review any confirmation messages
- Understand that approval makes notice visible to lenders

- Confirm you want to proceed

Issuer - Token Approval

### 3. Complete Approval

- Confirm your approval action
- Approval is processed
- Status updates to TOKEN\_APPROVED
- Funding notice becomes visible to lenders

### 4. Verify Approval Completion

- Confirm status shows approval is complete
- Verify funding notice is now visible to lenders
- Check that lenders receive notifications
- Ensure process can proceed

## After Approval

### 1. Lender Visibility

- Funding notice is now visible to all lenders
- Lenders receive notifications about the notice
- Lenders can review drawdown details
- Lenders can make approval decisions

## 2. **Track Lender Decisions**

- Monitor which lenders have reviewed the notice
- See which lenders have approved or rejected
- Track individual lender participation
- Monitor fund transfer confirmations

## 3. **Proceed with Drawdown**

- Approved lenders can proceed with fund transfer
- Each lender confirms their transfer independently
- Funds are transferred to you as lenders confirm
- Drawdown process completes as transfers are confirmed

## **Rules & Validations**

- You can only approve tokens after they've been generated. Tokens must be created by facility agent before you can approve.
- You must review allocation before approving. Take time to verify token amounts and distribution are correct.
- Approval makes funding notice visible to lenders. Once approved, lenders can see and review the notice.
- Once approved, you cannot easily undo the approval. Approval is a significant step, so verify everything before approving.
- Lenders can then review and approve drawdowns. After your approval, lenders make their own decisions.
- Token amounts must match funding request. The total token amount should equal your approved funding request amount.
- Lender distribution is based on facility participation. Allocations are calculated from lender participation percentages.
- Approval is required for process to continue. The drawdown process cannot proceed until you approve token transfer.
- Status updates after approval. Funding notice status changes to `TOKEN_APPROVED` to reflect your approval.
- Complete audit trail. Your approval is recorded with timestamp and details.

## What Happens Next

After approving token transfer:

- Funding notice becomes visible to all lenders
- Lenders receive notifications about the notice
- Lenders can review drawdown details and make decisions
- Approved lenders can proceed with fund transfer
- You can track lender decisions and transfer confirmations
- Funds are transferred to you as lenders confirm transfers
- Drawdown process completes as all transfers are confirmed

Understanding borrower token approval helps you complete the drawdown process, enable lenders to participate in your funding requests, and ensure proper verification before funds are disbursed.

# Lender Approval and Rejection

Learn how lenders approve or reject funding notice drawdowns

## Overview

Lenders review funding notices and can approve or reject individual drawdowns. Each lender makes their own independent decision, and the system tracks individual lender participation separately. This allows lenders to evaluate each drawdown based on their own criteria and participate or decline as they see fit.

## Who Can Use This

- Lenders who receive funding notices after borrower token approval

## When This Is Used

Use lender approval when:

- Funding notice becomes visible after borrower approves token transfer
- You need to review a drawdown request
- You want to approve or reject participation in a drawdown
- You need to make a decision on whether to fund your portion
- You want to evaluate drawdown details before committing funds

## Step-by-Step Process

### Reviewing Funding Notice

#### 1. Access Funding Notice

- Navigate to your funding notices section
- View funding notices available for your review
- Open the notice you want to review

- Review complete drawdown information

## 2. Review Drawdown Details

- **Request Amount:** Check the total drawdown amount
- **Your Allocation:** Review your portion of the drawdown
- **Purpose:** Understand what the funds will be used for
- **Funding Date:** Check when funds are needed
- **Facility Details:** Review facility terms and conditions

## 3. Evaluate Drawdown

- Assess borrowing base impact
- Review facility utilization after this drawdown
- Check if drawdown complies with facility rules
- Evaluate borrower's purpose and justification
- Consider your risk and exposure
- Review your token allocation amount

## 4. Review Supporting Information

- Check any supporting documentation provided
- Review borrower's financial information if available
- Assess collateral if applicable
- Evaluate overall facility health

## Making Decision - Approve

### 1. Evaluate Approval Criteria

- Drawdown meets facility rules
- Sufficient borrowing capacity available
- Purpose is acceptable
- Borrower is in good standing
- Your risk tolerance allows participation
- Drawdown aligns with your investment criteria

### 2. Approve Drawdown

- Click the "Approve" button or similar
- Review any confirmation messages
- Confirm your approval decision
- Your approval is recorded

**CREDIT FACILITY**

**Place Order – CF • Demo Credit Facility**

1 **Review Funding Notice**  
Your order is pending review and approval.

2 **Signature Required**  
Please review and execute documents.

3 **Choose Payment Rail**  
Select how you want to pay.

4 **Payment Completed**  
Your payment is complete.

Lender Approval - Funding Notice

### 3. After Approval

- Your participation is confirmed
- You can proceed with fund transfer
- Your portion of the drawdown is committed
- Status shows you've approved
- You can transfer funds when ready

## Making Decision - Reject

### 1. Evaluate Rejection Reasons

- Drawdown doesn't meet your criteria
- Risk concerns
- Facility utilization concerns
- Borrower concerns
- Other business reasons

## 2. **Reject Drawdown**

- Click the "Reject" button or similar
- Provide rejection reason if required
- Enter any comments explaining your decision
- Confirm your rejection

## 3. **After Rejection**

- Your participation is declined
- You will not fund your portion
- Other lenders make independent decisions
- Borrower can see which lenders approved
- Your rejection doesn't affect other lenders

## Tracking Decisions

### 1. **View Your Decision Status**

- See whether you've approved or rejected
- Review your decision timestamp
- Check any comments you provided
- Verify your decision is recorded

### 2. **Monitor Other Lenders**

- See which other lenders have approved
- View which lenders have rejected
- Track overall lender participation
- Understand drawdown status

## Rules & Validations

- Each lender makes independent decision. Your decision doesn't affect other lenders' choices.
- Your decision doesn't affect other lenders. Other lenders can approve or reject independently.

- You can approve or reject based on your evaluation. Make decisions based on your own criteria and risk tolerance.
- Approved lenders can proceed with fund transfer. If you approve, you can transfer your portion of funds.
- Rejected lenders don't participate in that drawdown. If you reject, you won't fund your portion, but other lenders can still participate.
- Decisions are final once submitted. You cannot easily change your decision after submitting.
- Rejection reasons help borrowers understand. Providing reasons helps borrowers understand lender concerns.
- Individual tracking. Each lender's decision is tracked separately with timestamps and details.
- Borrower visibility. Borrowers can see which lenders approved and which rejected.
- Complete audit trail. All decisions are recorded with who made what decision and when.

## What Happens Next

After making your decision:

- **If Approved:** You can proceed with fund transfer, transfer your allocated portion to the borrower, confirm the transfer, and your participation is complete.
- **If Rejected:** You don't participate in this drawdown, other lenders make their own decisions independently, borrower can see your rejection, and you can participate in future drawdowns.

After all lenders decide:

- Approved lenders transfer funds and confirm transfers
- Borrower receives funds from approved lenders
- Drawdown process completes as transfers are confirmed
- Borrower can track which lenders participated
- Complete documentation is maintained

Understanding lender approval and rejection helps you make informed decisions on drawdowns, participate effectively in credit facilities, and manage your participation based on your own evaluation criteria and risk tolerance.

# Funds Transfer Confirmation

Learn how lenders confirm fund transfers to complete drawdowns

## Overview

Funds transfer confirmation is the final step where lenders confirm they have transferred funds to borrowers, completing the drawdown process for each individual lender. This provides official confirmation that funds have been disbursed and marks lender participation as complete.

## Who Can Use This

- Lenders who have approved funding notice drawdowns and transferred funds

## When This Is Used

Use fund transfer confirmation when:

- You have approved a drawdown
- You have transferred funds to the borrower
- You want to mark the transfer as complete
- You need to finalize your participation in the drawdown
- You want to confirm that funds have been disbursed

## Step-by-Step Process

### Transferring Funds

#### 1. Review Your Approval

- Navigate to the funding notice you approved
- Review your approval status
- Verify your allocated amount

- Confirm you're ready to transfer funds

## 2. **Complete Fund Transfer**

- Transfer your allocated portion to the borrower
- Use the transfer method specified in the facility
- Transfer the exact amount of your allocation
- Ensure transfer is successful
- Keep transfer confirmation details (transaction ID, reference number, etc.)

## 3. **Verify Transfer Success**

- Confirm funds were transferred successfully
- Verify transfer amount matches your allocation
- Check that transfer was completed
- Ensure you have transfer confirmation details
- Note any transfer reference numbers or IDs

## **Confirming Transfer**

### 1. **Access Confirmation Function**

- Navigate to the funding notice
- Review your approval status
- Find the fund transfer confirmation section
- Access the confirmation interface

### 2. **Review Transfer Details**

- Verify you've transferred funds
- Check transfer amount matches your allocation
- Confirm transfer was successful
- Review transfer date and time
- Verify transfer reference information

### 3. **Enter Confirmation Details**

- Enter transfer confirmation details if required
- Add transfer reference number or transaction ID

- Include any relevant transfer information
- Add confirmation note if needed
- Verify all details are accurate

#### 4. **Submit Confirmation**

- Click "Confirm Fund Transfer" button or similar
- Review your confirmation details
- Confirm the confirmation action
- Submit your confirmation
- Status updates to show transfer confirmed

![Fund Transfer Confirmation](imagesByMdFilesFolder/29/Fund Transfer Confirmation.png)

#### 5. **Verify Confirmation**

- Confirm status shows transfer is confirmed
- Verify your participation is marked complete
- Check that confirmation is recorded
- Ensure borrower can see your confirmation

### **After Confirmation**

#### 1. **Participation Complete**

- Your participation in the drawdown is marked complete
- Drawdown process is finished for your portion
- Status shows transfer confirmed
- Your contribution is documented

#### 2. **Borrower Receives Funds**

- Borrower receives your transferred funds
- Borrower can see your confirmation
- Borrower can track which lenders have confirmed
- Borrower knows funds have been received

### 3. Process Completion

- As other lenders confirm, drawdown progresses
- Borrower receives funds from all confirming lenders
- Drawdown process completes as all transfers are confirmed
- Complete documentation is maintained

## Rules & Validations

- You can only confirm after you've approved the drawdown. You must approve before you can confirm transfer.
- You should transfer funds before confirming. Confirm only after you've actually transferred funds to the borrower.
- Confirmation marks your participation as complete. Once confirmed, your participation in this drawdown is finalized.
- Each lender confirms independently. You confirm your own transfer, and other lenders confirm theirs separately.
- Your confirmation doesn't affect other lenders. Other lenders confirm their transfers independently.
- Confirmation is final. Once confirmed, you cannot easily undo the confirmation.
- Transfer details should be accurate. Provide correct transfer information for proper documentation.
- Status updates after confirmation. Funding notice status reflects your confirmation.
- Complete audit trail. Your confirmation is recorded with timestamp and transfer details.
- Borrower visibility. Borrowers can see which lenders have confirmed transfers.

## What Happens Next

After confirming fund transfer:

- Your participation is marked complete
- Drawdown process is finished for your portion

- Status shows transfer confirmed
- Borrower receives your funds
- Borrower can see your confirmation
- Process continues as other lenders confirm
- Drawdown completes as all transfers are confirmed

After all lenders confirm:

- Borrower has received funds from all confirming lenders
- Drawdown process is complete
- Complete documentation is maintained
- Borrower can track all confirmations
- Facility utilization is updated
- Drawdown is fully documented

Understanding funds transfer confirmation helps you complete the drawdown process, finalize your participation in credit facility drawdowns, provide proper documentation that funds have been disbursed, and ensure complete transparency in the fund transfer process.

# Pool Creation and Sharing

Learn how to create pools and share them with other organizations

## Overview

This guide covers the complete process of creating pools and sharing them with other organizations. As an issuer, you'll learn how to create pools, add loans, configure sharing options, and share pools with market makers, investors, and other parties to facilitate structured finance transactions.

## Who Can Use This

- Issuers who create and manage pools for securitization or whole loan sales

## When This Is Used

Use pool creation and sharing when:

- You want to create a new pool to group loans together
- You need to present loans to potential investors or market makers
- You want to organize loans for a structured finance transaction
- You need to share pools with other parties for review or structuring
- You want to collaborate with market makers, investors, or rating agencies

## Step-by-Step Process

### Creating a Pool

#### 1. Access Pool Creation

- Navigate to the Pools section
- Click "Create New Pool" or similar button
- Pool creation form opens

## 2. Enter Basic Information

- **Pool Name:** Provide a unique name to identify the pool (must be unique)
- **Asset Class:** Select the type of loans (auto loans, personal loans, mortgages, etc.)
- **Transaction Type:** Choose the transaction type (securitization, whole loan sale, etc.)
- **Description:** Add a description if needed to provide context
- **Closing Deal Indicator:** Indicate if this is a closing deal

## 3. Assign Organizations

- **Market Makers:** Select market makers who will structure the deal
- **Investors:** Choose investors who will review investment opportunities
- **Servicers:** Assign servicers if needed for ongoing loan administration
- **Paying Agents:** Add paying agents if needed for payment distributions
- **Rating Agencies:** Select rating agencies if needed for analysis
- **Other Parties:** Add any other parties as required

## 4. Review Information

- Review all entered information for accuracy
- Verify organization assignments are correct
- Ensure pool name is unique
- Check that all required fields are filled

## 5. Create Pool

- Click "Create" button or similar
- Pool is created with "Created" status
- Pool is visible only to you initially
- Pool is ready for loan mapping

Pool Creation - Issuer

## Adding Loans to Pool

### 1. Navigate to Pool Details

- Open the pool you created
- Go to the Loans section or Loan Mapping area
- View available loans for mapping

### 2. Select Loans to Map

- Browse or search for loans to include
- Select individual loans or use bulk selection
- Can select multiple loans at once
- Verify loans are not already mapped to another pool

### 3. Map Loans to Pool

- Confirm loan selection
- Click "Map to Pool" or similar button
- Loans are assigned to the pool
- Loan status changes to "Mapped"

Loan Map to Pool - Issuer

4. Review Pool Metrics

- Pool metrics calculate automatically
- **Total Balance:** Sum of all mapped loan balances
- **Loan Count:** Number of loans in the pool
- **Weighted Average Coupon:** Interest rate weighted by loan balance
- **Weighted Average FICO:** Credit score weighted by loan balance
- **Other Metrics:** Geographic distribution, average loan size, etc.
- Verify metrics are accurate and meet your requirements

Pool Details - Issuer

## 5. Add or Remove Loans

- Continue adding loans as needed
- Remove loans if necessary (they'll be excluded from calculations)
- Metrics update automatically with each change
- Review metrics after each change

## Sharing the Pool

### 1. Access Sharing Settings

- Navigate to pool details
- Find the Sharing or Organization Assignment section
- Click to configure sharing

### 2. Select Organizations to Share With

- Choose which organizations to share with
- Select from market makers, investors, rating agencies, etc.
- Can share with multiple organizations simultaneously
- Review organization list

### 3. Set Sharing Permissions

- **View Only:** Recipients can view but not provide feedback
- **Allow Feedback:** Recipients can provide comments and feedback
- **Allow Change Requests:** Recipients can request changes
- **Allow Downloads:** Recipients can download pool data
- Configure appropriate permissions for each organization type

### 4. Review Sharing Configuration

- Review selected organizations
- Verify permissions are set correctly
- Ensure sharing is configured as intended

### 5. Complete Sharing

- Click "Share" or "Save" button
- Confirm sharing action

- Recipients receive notifications
- Pool becomes visible to shared parties
- Pool status may change to "Preview"

Pool Sharing - Issuer

## 6. Verify Sharing

- Confirm recipients can see the pool
- Check that sharing permissions are working
- Verify notifications were sent
- Ensure pool is visible to shared parties

## Rules & Validations

- Pool names must be unique - you cannot create two pools with the same name.
- Loans can only belong to one pool at a time - you must unmap a loan from one pool before mapping it to another.
- You can share pools with multiple organizations simultaneously - sharing doesn't need to be done one at a time.
- Sharing permissions control what recipients can do - set appropriate permissions based on what you want recipients to be able to do.
- Pool metrics calculate automatically from mapped loans - you don't need to calculate them manually, and they update when loans are added or removed.

- You can edit pools while they're in Created or Preview status - once a pool becomes a Deal, editing is restricted.
- Removed loans are excluded from pool calculations - if you remove loans, metrics update automatically.
- Pool status affects sharing capabilities - some statuses may restrict sharing or require certain statuses before sharing.
- Sharing is recorded in audit trail - all sharing actions are tracked with who shared what with whom and when.
- Recipients must have appropriate roles - market makers can accept mandates, investors can review opportunities, etc.

## What Happens Next

After creating and sharing a pool:

- Recipients can view and analyze the pool in their views
- Market makers can review and accept mandates to structure deals
- Investors can review opportunities and express interest
- Rating agencies can analyze pool characteristics for rating purposes
- You receive feedback and can respond accordingly
- Pool may progress through statuses based on recipient actions
- Pool moves toward final deal completion

After sharing with market makers:

- Market makers can accept mandates to structure the deal
- Pool may move to "Mandate Pending" status
- Market maker structures the deal
- Pool progresses toward "Deal" status

Understanding pool creation and sharing helps you effectively present your loan portfolios, collaborate with other parties, and move pools through the structured finance workflow to successful deal completion.

# Loan Management

Learn how to manage loans including uploading, mapping, and updating loan information

## Overview

Loan management covers all the tasks issuers perform to manage loans in the platform, including uploading loans, mapping them to pools, updating loan information, managing loan statuses, and tracking loans through their lifecycle. Effective loan management ensures loan data quality and enables successful pool creation.

## Who Can Use This

- Issuers who manage loans and create pools

## When This Is Used

Use loan management when:

- You need to upload loan data into the system
- You want to map loans to pools for structured finance transactions
- You need to update loan information or correct data
- You want to manage loan statuses (map, unmap, remove, reinstate)
- You need to track loans through their lifecycle
- You want to organize loans for pool creation

## Step-by-Step Process

### Uploading Loans

1. **Prepare Loan Data**

- Organize loan data in a file (Excel, CSV, or other supported format)
- Ensure all required fields are included
- Verify data accuracy and completeness
- Check data format matches system requirements
- Include borrower information, financial details, and loan characteristics

## 2. Access Loan Upload

- Navigate to the Loans section
- Click "Upload Loans" or similar button
- Upload interface opens

## 3. Select and Upload File

- Click to browse for your loan file
- Select the file containing loan data
- Review file selection
- Click "Upload" to start the upload process

## 4. System Processing

- System processes and standardizes the loan data
- Data is validated and checked for errors
- Loans are stored in the system
- Processing status is displayed

## 5. Review Standardized Loans

- Review standardized loans after processing
- Check that data mapped correctly
- Verify loan information is accurate
- Review any validation messages or errors
- Correct any issues if needed
- Loans are ready for mapping to pools

## Mapping Loans to Pools

### 1. Access Loan List

- Navigate to the Loans section
- View list of available loans
- Filter loans if needed (by status, unmapped, etc.)
- Select loans you want to map

### 2. Select Loans to Map

- Choose individual loans or use bulk selection
- Can select multiple loans at once
- Verify loans are not already mapped to another pool
- Review selected loans

### 3. Choose Target Pool

- Select the pool you want to map loans to
- Choose from your available pools
- Verify correct pool is selected
- Ensure pool is in appropriate status (Created or Preview)

### 4. Confirm Mapping

- Review your selection (loans and pool)
- Confirm the mapping action
- Click "Map to Pool" or similar button
- Mapping is processed

Loan Map to Pool - Issuer

## 5. Verify Mapping

- Loans are mapped to the pool
- Loan status changes to "Mapped"
- Pool metrics update automatically
- Total balance increases
- Loan count increases
- Weighted averages recalculate
- Verify metrics updated correctly

## Managing Loan Statuses

### 1. View Loan Status

- Check loan status in loan list
- View status on loan details page
- Understand what each status means
- See status history if available

### 2. Update Loan Status - Remove from Pool

- Navigate to pool's loan list
- Find loan you want to remove

- Select the loan
- Update status to "Removed"
- Confirm removal
- Loan is excluded from pool calculations
- Pool metrics recalculate automatically

### 3. **Update Loan Status - Reinstate Loan**

- Filter to show removed loans
- Find loan you want to reinstate
- Select the loan
- Update status to "Reinstated" or "Active"
- Confirm reinstatement
- Loan is included in pool calculations again
- Pool metrics recalculate automatically

### 4. **Update Loan Status - Unmap from Pool**

- Navigate to pool's loan list
- Find loan you want to unmap
- Select the loan
- Update status to "Unmapped"
- Confirm unmapping
- Loan is removed from pool
- Pool metrics recalculate automatically
- Loan becomes available for mapping to other pools

## **Tracking Loan Information**

### 1. **View Loan Details**

- Open individual loan details
- See complete loan information
- Review borrower and financial details
- Check loan characteristics

- View loan status and history

## 2. **Monitor Loan Status Changes**

- Track when loans are mapped or unmapped
- See when loans are removed or reinstated
- Review status change history
- Understand loan lifecycle progression

## 3. **Review Loan Metrics**

- See how loans contribute to pool metrics
- Understand loan characteristics
- Review loan performance data
- Track loan information over time

## **Rules & Validations**

- Loans can only belong to one pool at a time - you must unmap a loan from one pool before mapping it to another.
- You must unmap a loan from one pool before mapping to another - the system prevents mapping loans that are already mapped.
- Removed loans are excluded from pool calculations - they don't contribute to metrics but remain visible for tracking.
- Pool metrics update automatically when loans are mapped or removed - you don't need to manually recalculate.
- Some statuses restrict certain actions - for example, you may not be able to map loans if the pool is in Deal status.
- Loan data must be in correct format - upload files must match system requirements for successful processing.
- Required fields must be included - missing required fields may cause upload errors or validation issues.
- Status changes are recorded - all status changes are tracked with who changed what and when.
- Pool status affects loan management - some pool statuses may restrict loan mapping, removal, or other actions.

- Complete audit trail - all loan management actions are recorded for audit and compliance purposes.

## What Happens Next

After uploading loans:

- Loans are available for mapping to pools
- You can create pools and map loans to them
- Loans contribute to pool metrics when mapped
- You can manage loans throughout their lifecycle

After mapping loans:

- Pool metrics calculate automatically
- Loans contribute to pool characteristics
- Pool is ready for sharing or further configuration
- You can add or remove loans as needed

After managing loan statuses:

- Pool metrics reflect current loan status
- Removed loans don't affect calculations
- Reinstated loans are included again
- Unmapped loans become available for other pools

Understanding loan management helps you effectively organize your loan portfolios, create successful pools, maintain loan data quality, and manage loans throughout the structured finance transaction process.

# Term Sheet Submission

Learn how to prepare, sign, and submit term sheets for facility agent review

## Overview

Term sheet submission is the process where borrowers submit their term sheets to facility agents for review. This guide covers how to prepare term sheets, complete electronic signatures, and submit them effectively to move forward with credit facility setup.

## Who Can Use This

- Borrowers who create term sheets and want to propose credit facilities

## When This Is Used

Use term sheet submission when:

- You've completed your term sheet with all required information
- You're ready to submit for facility agent review
- You want to propose a credit facility to lenders
- You need to move forward with facility setup
- You've reviewed and verified all term sheet information

## Step-by-Step Process

### Preparing for Submission

#### 1. Complete Term Sheet Information

- Fill in all required fields
- **Facility Name:** Enter unique facility name
- **Maximum Facility Amount:** Specify total borrowing limit

- **Interest Rate:** Enter proposed interest rate or rate structure
- **Repayment Terms:** Specify how and when repayments will be made
- **Term:** Enter facility term or duration
- **Purpose:** Describe the purpose of the facility
- **Other Terms:** Fill in any other required facility terms

## 2. Upload Required Documents

- Upload supporting documents that justify the request
- Include financial statements, business plans, or other required documentation
- Ensure documents meet quality and format requirements
- Verify all required documents are included
- Check document quality and readability

## 3. Review All Information

- Review all term sheet details carefully
- Verify amounts and rates are correct
- Check dates and terms are accurate
- Ensure all information is complete
- Verify documents are attached correctly
- Confirm everything is ready for submission

## 4. Save Your Work

- Save term sheet as draft if not ready to submit
- You can return later to complete or edit
- Draft status allows you to work on it over time
- Status shows as "Draft"

# Signing the Term Sheet

## 1. Initiate Electronic Signature

- Ensure term sheet is complete and ready
- Click "Sign" button or similar
- Electronic signature process begins

- Signature interface opens

## 2. **Review Documents Before Signing**

- Review the complete term sheet document
- Verify all terms and conditions are correct
- Check that all information is accurate
- Ensure you understand what you're signing
- Review all attached documents

## 3. **Complete Electronic Signature**

- Follow the signature interface instructions
- Apply your electronic signature
- Complete all required signature fields
- Confirm your signature
- Verify signature is recorded

## 4. **Verify Signature Completion**

- Confirm signature is complete
- Review the signed version
- Verify signature is recorded correctly
- Status changes to show term sheet is signed (e.g., "BorrowerSigned")
- You can preview the signed version

## 5. **Review Signed Version**

- Preview the signed term sheet
- Verify all information is still correct
- Check that signature is included
- Confirm document is ready for submission

# **Submitting the Term Sheet**

## 1. **Final Review Before Submission**

- Review signed term sheet one final time
- Verify all information is correct

- Check documents are attached
  - Ensure signature is complete
  - Confirm you're ready to submit
2. **Submit for Facility Agent Review**
    - Click "Submit" button or similar
    - Review any confirmation messages
    - Understand that submission moves term sheet to review
    - Confirm the submission action
  3. **Submission Processing**
    - Term sheet is submitted to facility agent
    - Status changes to "FAReview" or "Under Review"
    - Facility agent receives notification
    - You receive confirmation of submission
  4. **Wait for Facility Agent Decision**
    - Facility agent reviews your term sheet
    - Review typically takes a few days
    - You receive notifications about status changes
    - You can monitor review progress
  5. **Handle Facility Agent Decision**
    - **If Approved:** Master commitment is automatically created, you receive notification
    - **If Rejected:** You receive rejection reason, you can create a new term sheet
    - **If Changes Requested:** You receive change request details, you can update and resubmit

## Rules & Validations

- You must sign the term sheet before submitting - unsigned term sheets cannot be submitted.
- All required fields must be filled - incomplete term sheets cannot be submitted.

- Required documents must be uploaded - missing documents may prevent submission or cause rejection.
- You can only submit once term sheet is signed - signature is required before submission.
- Status must be signed before submission - term sheet must be in signed status to allow submission.
- Once submitted, editing is restricted - you cannot edit term sheets while they're under review.
- Submission moves term sheet to review - status changes to indicate it's under facility agent review.
- Facility agent makes decision - you must wait for facility agent to review and decide.
- Complete audit trail - all submissions and status changes are recorded with timestamps.
- Notifications are sent - you receive notifications when term sheet is submitted and when decisions are made.

## What Happens Next

After submitting term sheet:

- Term sheet is sent to facility agent for review
- Facility agent evaluates your proposal
- You receive notification of decision
- If approved, master commitment is automatically created
- If rejected, you receive reason and can create a new term sheet
- If changes requested, you receive details and can update and resubmit

After facility agent approval:

- Master commitment is automatically created
- Facility agent configures the complete facility structure
- Facility agent submits master commitment for lender approval
- Lenders review and approve the facility

- Facility becomes active, and you can create funding requests

Understanding term sheet submission helps you effectively propose credit facilities, complete the submission process correctly, and move through the approval workflow to active facility setup.

# Funding Requests

Learn how to create, manage, and submit funding requests against active credit facilities

## Overview

This guide covers how borrowers create, manage, and submit funding requests against active credit facilities. Learn how to request drawdowns, provide supporting documentation, track request status, and handle outcomes to access funds from your approved facilities.

## Who Can Use This

- Borrowers who need to draw down funds from active credit facilities

## When This Is Used

Use funding requests when:

- You have an active credit facility approved by lenders
- You need to borrow funds for specific purposes
- You want to draw down a portion of your approved facility limit
- You need funds for business operations or other purposes
- You want to access your pre-approved borrowing capacity

## Step-by-Step Process

### Creating Funding Requests

#### 1. Access Funding Request Creation

- Navigate to your active credit facility
- Go to Funding Requests section

- Click "Create Funding Request" or similar button
- Funding request form opens

Funding Request Creation - Issuer

## 2. Enter Request Details

- **Drawdown Amount:** Specify the amount you want to borrow (must be within available borrowing capacity)
- **Purpose of Funds:** Enter detailed description of what funds will be used for
- **Funding Date:** Select when you need the funds
- **Currency:** Select currency if multiple currencies are supported
- **Notes:** Add any additional notes or comments

## 3. Upload Supporting Documentation

- Upload documents that justify the request
- Include financial statements, business plans, or other required documentation
- Provide documentation that supports the purpose
- Ensure documents meet quality and format requirements
- Verify all required documents are included

## 4. Add Collateral Information (if applicable)

- Specify loans or assets to be used as collateral
- Provide collateral details and descriptions

- Include collateral valuation if required
- Upload collateral documentation
- Ensure collateral meets facility eligibility criteria

#### 5. Review Request Information

- Review all entered information for accuracy
- Verify amount is within available borrowing capacity
- Check purpose is clearly described
- Ensure documentation is complete
- Confirm all required fields are filled

#### 6. Save or Submit

- **Save as Draft:** Save to complete later if not ready to submit
- **Submit Immediately:** Submit for facility agent review if complete
- Status updates accordingly (Draft or FARReview)
- You receive confirmation

## Managing Funding Requests

#### 1. View All Requests

- Navigate to Funding Requests section
- See all your funding requests
- Filter by facility, status, or date if needed
- View request list with status indicators

#### 2. Track Request Status

- **Draft:** Can edit freely, not yet submitted
- **FARReview:** Under facility agent review, waiting for decision
- **APPROVED:** Approved by facility agent, funding notice created
- **REJECTED:** Rejected by facility agent, cannot resubmit
- **CHANGES\_REQUESTED:** Facility agent requested modifications, can update and resubmit

#### 3. Edit Draft Requests

- Open draft request for editing

- Modify amount, purpose, date, or documents
- Update collateral information if needed
- Save changes
- Submit when ready

#### 4. **Respond to Change Requests**

- Review change request details
- Understand what modifications are needed
- Update request with requested changes
- Address all requested items
- Resubmit for review

#### 5. **View Request Details**

- Open individual request details
- Review complete request information
- See status history and updates
- Check facility agent comments or reasons
- View attached documents

### **Handling Request Outcomes**

#### 1. **If Approved**

- Funding notice is automatically created
- You receive notification of approval
- Monitor funding notice progress
- Approve token transfer when ready
- Track lender approvals and fund transfers

#### 2. **If Rejected**

- Review rejection reason carefully
- Understand why request was rejected
- Address issues if possible
- Create new funding request with corrections

- Adjust amount if capacity was the issue

### 3. If Changes Requested

- Review requested changes
- Update funding request accordingly
- Address all requested modifications
- Resubmit for facility agent review
- Process can repeat until approved or rejected

## Rules & Validations

- You can only create requests against active facilities - facilities must be approved by lenders and in Active status.
- Facility must have available borrowing capacity - you can only request amounts up to your available capacity, which may be less than your total facility limit.
- You can have only one draft request per facility at a time - you must submit or delete draft requests before creating new ones.
- Approved requests automatically generate funding notices - you don't need to create notices manually.
- Rejected requests cannot be resubmitted - if rejected, you must create a new request addressing the issues.
- Change requests allow editing and resubmission - this is less severe than rejection and allows iterative improvement.
- Request amount cannot exceed available capacity - system validates that amount is within limits.
- Required documentation must be provided - missing documents may result in rejection or change request.
- Status controls what actions are available - you can only edit draft requests or requests with changes requested.
- Complete audit trail - all requests, submissions, and outcomes are recorded with timestamps and details.

## What Happens Next

After creating a funding request:

- Request is saved as draft or submitted for review
- If submitted, facility agent receives notification
- Facility agent evaluates and makes decision
- You receive notification of outcome

After facility agent approval:

- Funding notice is automatically created
- Tokens are generated and distributed
- You approve token transfer
- Funding notice becomes visible to lenders
- Lenders review and approve drawdowns
- Funds are transferred as lenders confirm

After rejection:

- You receive rejection reason
- You can create new request addressing issues
- New request goes through same review process
- You can adjust amount or provide better documentation

Understanding funding requests helps you effectively request drawdowns from your credit facilities, provide proper documentation, manage request status, and work through the approval process to access funds when needed.

# Token Approval

Learn how to review token allocations and approve token transfers for funding notices

## Overview

Token approval is the step where borrowers approve the transfer of tokens, making funding notices visible to lenders. This guide covers how to review token allocations, verify distribution accuracy, and approve token transfers to enable the drawdown process and allow lenders to review and approve funding.

## Who Can Use This

- Borrowers who have funding notices with generated tokens

## When This Is Used

Use token approval when:

- Tokens have been generated for your funding notice by the facility agent
- You want to proceed with the drawdown process
- You need to make the funding notice visible to lenders
- You're ready to enable lender review and approval
- You want to verify token allocation before proceeding

## Step-by-Step Process

### Reviewing Token Allocation

#### 1. Access Funding Notice

- Navigate to Funding Notices section
- Find funding notice with tokens generated

- Status shows tokens are generated (e.g., "TOKEN\_GENERATED")
- Open funding notice details

## 2. Review Token Details

- **Total Token Amount:** Check total matches your funding request amount
- **Funding Date:** Verify funding date is correct
- **Purpose:** Review purpose of funds
- **Facility Information:** Confirm facility details are accurate
- Verify all information matches your funding request

## 3. Review Lender Distribution

- View how tokens are distributed to lenders
- **Individual Lender Allocations:** See each lender's portion
- **Distribution Percentages:** Check percentages match facility participation
- **Lender Names:** Verify all lenders are included
- **Allocation Amounts:** Confirm each lender's amount is correct
- Review total distribution equals request amount

## 4. Verify Allocation Accuracy

- Confirm total allocation equals request amount
- Check that lender percentages are correct
- Verify no errors in distribution
- Ensure all lenders are included
- Review individual allocations for accuracy

## 5. Review Complete Information

- Ensure request amount is correct
- Check funding date is appropriate
- Verify purpose is accurate
- Confirm facility details are correct
- Review all information one final time

## Approving Token Transfer

## 1. Final Review Before Approval

- Review all token allocation details carefully
- Verify token amounts match your expectations
- Check lender distribution is accurate
- Confirm all information is correct
- Ensure you're ready to proceed

## 2. Understand Approval Impact

- Approval makes funding notice visible to lenders
- Lenders can review and make decisions
- Process moves forward to lender review
- You cannot easily undo approval
- Ensure everything is correct before approving

## 3. Initiate Approval

- Click "Approve Token Transfer" button or similar
- Review any confirmation messages
- Understand what happens after approval
- Confirm you want to proceed

Issuer - Token Approval

## 4. Complete Approval

- Confirm your approval action
- Approval is processed
- Status updates to show token approval (e.g., "TOKEN\_APPROVED")
- Funding notice becomes visible to lenders
- Lenders receive notifications

#### 5. **Verify Approval Completion**

- Confirm status shows approval is complete
- Verify funding notice is now visible to lenders
- Check that lenders receive notifications
- Ensure process can proceed
- Status reflects approval

### **After Approval**

#### 1. **Lender Visibility**

- Funding notice is now visible to all lenders
- Lenders receive notifications about the notice
- Lenders can review drawdown details
- Lenders can make approval decisions

#### 2. **Track Lender Decisions**

- Monitor which lenders have reviewed the notice
- See which lenders have approved or rejected
- Track individual lender participation
- Monitor fund transfer confirmations
- View lender decision status

#### 3. **Proceed with Drawdown**

- Approved lenders can proceed with fund transfer
- Each lender confirms their transfer independently
- Funds are transferred to you as lenders confirm
- Drawdown process completes as transfers are confirmed

- You receive funds from confirming lenders

## Rules & Validations

- You can only approve tokens after they've been generated - tokens must be created by facility agent before you can approve.
- You must review allocation before approving - take time to verify token amounts and distribution are correct.
- Approval makes funding notice visible to lenders - once approved, lenders can see and review the notice.
- Once approved, you cannot easily undo the approval - approval is a significant step, so verify everything before approving.
- Lenders can then review and approve drawdowns - after your approval, lenders make their own decisions.
- Token amounts must match funding request - the total token amount should equal your approved funding request amount.
- Lender distribution is based on facility participation - allocations are calculated from lender participation percentages.
- Approval is required for process to continue - the drawdown process cannot proceed until you approve token transfer.
- Status updates after approval - funding notice status changes to reflect your approval.
- Complete audit trail - your approval is recorded with timestamp and details.

## What Happens Next

After approving token transfer:

- Funding notice becomes visible to all lenders
- Lenders receive notifications about the notice
- Lenders can review drawdown details and make decisions
- Approved lenders can proceed with fund transfer
- You can track lender decisions and transfer confirmations

- Funds are transferred to you as lenders confirm transfers
- Drawdown process completes as all transfers are confirmed

After lenders approve:

- Approved lenders transfer their allocated portions
- Each lender confirms transfer independently
- You receive funds from confirming lenders
- Drawdown process completes as transfers are confirmed
- Complete documentation is maintained

Understanding token approval helps you complete the drawdown process, enable lenders to participate in your funding requests, verify token allocation accuracy, and ensure proper verification before funds are disbursed.

# Pool Mandate Review

Learn how market makers review pools and make mandate decisions

## Overview

Pool mandate review is the process where market makers review pools shared with them and decide whether to accept mandates to structure and manage those pools. This guide covers how market makers evaluate pools, assess opportunities, and make informed mandate decisions that affect pool workflow progression.

## Who Can Use This

- Market Makers who receive pool mandates from issuers

## When This Is Used

Use pool mandate review when:

- You receive a pool mandate from an issuer
- Pools are shared with you for mandate consideration
- You need to evaluate a pool opportunity
- You want to decide whether to accept a mandate
- You're reviewing pools for structuring potential

## Review Process

**Accessing Pool Mandates** - When issuers share pools with you for mandate consideration, you receive notifications. Navigate to shared pools or mandate queue to see pools waiting for your review. Open pool details to review complete information.

**Reviewing Pool Information** - Review complete pool information including pool name, asset class, transaction type, description, mapped loans, pool metrics, organization assignments, and current status. Understand the full context of the pool opportunity.

**Deal Review Interface** - The deal review interface provides comprehensive information about the pool, including allocation distribution, forward flow controls, and deal structure details.

**Forward Flow Controls** - Review forward flow controls including revolving and discretionary settings that govern how the deal operates.

**Publish Tab** - Review the publish tab to understand how deals are published and made available to investors.

**Analyzing Pool Metrics** - Review total pool balance, check number of loans in pool, evaluate weighted average coupon (interest rate characteristics), assess weighted average FICO (credit quality), review geographic distribution, check loan-to-value ratios, and review all relevant pool statistics.

**Evaluating Loan Quality** - Review individual loan characteristics, assess loan distribution and diversity, evaluate risk profile of loans, check loan performance data if available, assess overall loan quality, and understand loan composition.

**Assessing Marketability** - Evaluate investor appeal, assess market conditions, review competitive positioning, check structuring feasibility, assess deal potential, and determine if pool meets market requirements.

**Reviewing Documentation** - Check pool documentation completeness, verify loan data quality, review supporting materials, assess compliance information, and check data accuracy.

## Evaluation Criteria

**Pool Quality Assessment** - Evaluate overall pool quality, assess loan characteristics and diversity, review pool metrics and statistics, check loan quality indicators, and assess pool composition and structure.

**Risk Profile Evaluation** - Evaluate credit risk, assess concentration risk, review geographic risk, check industry or sector risk, evaluate overall risk-return profile, and determine if risk is acceptable.

**Marketability Assessment** - Assess investor appeal, evaluate market conditions, review competitive positioning, check structuring feasibility, assess deal potential, and determine market readiness.

**Structuring Potential** - Evaluate structuring feasibility, assess deal complexity, review structuring requirements, check if pool can be structured effectively, and determine structuring potential.

**Documentation Quality** - Check documentation completeness, verify data quality, review supporting materials, assess compliance information, and ensure documentation meets requirements.

**Overall Opportunity Assessment** - Consider all factors together, evaluate opportunity attractiveness, assess fit with your capabilities, determine if mandate should be accepted, and make informed decision.

## Making Decisions

**Accept Mandate** - Accept when pool quality and marketability meet your criteria: pool quality is acceptable, structuring potential is good, marketability is strong, documentation is adequate, and opportunity fits your capabilities. When accepted, pool status updates to Deal, you become the market maker for the pool, and issuer receives notification.

**Reject Mandate** - Reject when pool doesn't meet your criteria: pool quality concerns, insufficient structuring potential, marketability issues, documentation problems, or opportunity doesn't fit. Provide rejection reason if required, enter comments explaining decision, pool may return to Preview status, issuer can share with other market makers, and issuer receives notification.

**Request Changes** - Request changes when improvements are needed: minor issues that can be addressed, additional documentation needed, clarifications required, or modifications needed to improve pool. Provide specific change request details, issuer receives feedback, issuer can update pool based on feedback, issuer may resubmit for your review, and process can repeat until accepted or rejected.

**Decision Documentation** - Ensure all decisions are properly documented, provide clear reasons for decisions, include relevant comments or explanations, and maintain complete audit trail of decisions.

## Rules & Validations

- You can accept or reject mandates based on your evaluation. Make decisions based on your assessment of pool quality and marketability.
- You can request changes if improvements are needed. Provide feedback to help issuers improve pools before acceptance.
- Acceptance makes you the market maker for the pool. Once accepted, you're committed to structuring the deal.
- Rejection allows issuer to share with other market makers. Rejection doesn't prevent issuer from finding another market maker.
- Your decision affects pool workflow progression. Acceptance moves pool toward deal status, rejection may return it to preview.
- Mandate decisions are tracked. All decisions are recorded with timestamps and reasons.
- You can only accept one mandate per pool. Once accepted, pool is committed to you.
- Status controls what actions are available. Pool status determines what you can do.
- Complete audit trail. All mandate decisions are recorded for audit purposes.
- Issuer is notified of your decision. Issuers receive notifications when you make decisions.

## What Happens Next

After making a mandate decision:

- **If Accepted:** You become the market maker and can structure the deal, pool moves to Deal status, you proceed with deal structuring activities, and pool progresses toward completion.
- **If Rejected:** Pool may return to Preview status, issuer receives notification with reason, issuer can share with other market makers, and pool remains available for other opportunities.
- **If Changes Requested:** Issuer receives your feedback, issuer can update pool based on feedback, issuer may resubmit for your review, and process can repeat until accepted or rejected.

After accepting mandate:

- Pool is committed to you for structuring
- You proceed with deal structuring activities
- Pool moves toward final deal completion
- You coordinate with issuer and investors
- Deal progresses through structuring to completion

Understanding pool mandate review helps market makers effectively evaluate pool opportunities, make informed mandate decisions, and structure deals that meet market requirements and investor expectations.

# Term Sheet Review

Learn how facility agents review term sheets and make approval decisions

## Overview

Term sheet review is the process where facility agents evaluate term sheets submitted by borrowers and decide whether to approve, reject, or request changes. This guide covers how facility agents review term sheets effectively, assess proposals, and make decisions that affect facility setup workflow.

## Who Can Use This

- Facility Agents who review term sheets submitted by borrowers

## When This Is Used

Use term sheet review when:

- Borrowers submit term sheets for your review
- You need to evaluate facility proposals
- You want to approve or reject term sheets
- You need to ensure compliance with requirements
- You want to request modifications to improve proposals

## Review Process

**Accessing Term Sheets** - When borrowers submit term sheets, they appear in your review queue. Check notifications for new term sheet submissions, navigate to term sheets for review, and open term sheet details to review all information provided.

**Review Interface** - The term sheet review interface provides a comprehensive view of all term sheet information, including facility terms, borrower details, and supporting documentation. You can review the complete proposal to evaluate all aspects.

**FACILITY OPERATIONS**

**Overview**

Pending Term Sheets:

**Inbox** Active Facilities

**Inbox data table**

Review Term Sheet - FA

**Reviewing Term Sheet Information** - Review complete term sheet information including facility amount, interest rates, repayment terms, facility term, purpose, borrower information, supporting documentation, and all facility terms and conditions.

**Evaluating Facility Terms** - Assess if facility amount is appropriate and reasonable, evaluate interest rate or rate structure, review how repayments are structured, check duration and maturity, understand what funds will be used for, and review all facility terms and conditions.

**Assessing Facility Structure** - Evaluate overall facility structure, review facility type and characteristics, assess facility complexity, check if structure is appropriate, and evaluate feasibility.

**Assessing Borrower Creditworthiness** - Review borrower financial information, evaluate credit history and standing, assess borrower capacity, check borrower qualifications, and review borrower track record.

**Reviewing Documentation** - Check financial statements completeness, verify required documents are included, review supporting materials quality, assess documentation accuracy, and ensure documentation meets requirements.

**Assessing Compliance** - Verify terms meet facility requirements, check borrower qualifications, ensure documentation is complete, confirm compliance with policies, and review regulatory compliance.

## Evaluation Criteria

**Facility Terms Assessment** - Evaluate if facility amount is appropriate, assess interest rate structure, review repayment terms, check facility term and maturity, understand purpose and use of funds, and verify all terms are reasonable.

**Facility Structure Evaluation** - Assess overall facility structure, evaluate facility type and characteristics, review facility complexity, check if structure is appropriate, and determine feasibility.

**Borrower Creditworthiness** - Review borrower financial information, evaluate credit history and standing, assess borrower capacity and qualifications, check borrower track record, and determine creditworthiness.

**Documentation Quality** - Check financial statements completeness, verify required documents are included, review supporting materials quality, assess documentation accuracy, and ensure documentation meets requirements.

**Compliance Verification** - Verify terms meet facility requirements, check borrower qualifications, ensure documentation is complete, confirm compliance with policies, and review regulatory compliance.

**Overall Proposal Quality** - Assess proposal soundness, evaluate feasibility, check if proposal meets requirements, determine if proposal is acceptable, and make overall assessment.

## Making Decisions

**Approve Term Sheet** - Approve when all requirements are met: proposal is sound and feasible, terms are appropriate, borrower is creditworthy, documentation is complete, and compliance is verified. When approved, master commitment is automatically created, status changes to Accepted, and borrower receives notification.

**Reject Term Sheet** - Reject when requirements are not met: proposal doesn't meet requirements, terms are inappropriate, borrower creditworthiness concerns, incomplete documentation, or compliance issues. Provide detailed rejection reason, enter comments explaining rejection, status changes to Rejected, borrower can create new term sheet, and borrower receives notification.

**Request Changes** - Request changes when improvements are needed: minor issues that can be addressed, additional documentation needed, clarifications required, or modifications needed to make proposal acceptable. Provide detailed change request, enter specific modifications needed, status changes to CHANGES\_REQUESTED, borrower can update and resubmit, and borrower receives notification.

**Decision Documentation** - Enter approval comments if approving, provide detailed rejection reason if rejecting, specify change request details if requesting changes, include any relevant comments or explanations, and ensure all decisions are properly documented.

## Rules & Validations

- You can approve, reject, or request changes. Three options allow you to handle different situations appropriately.
- Approved term sheets automatically create master commitments. You don't need to create master commitments manually.

- Rejected term sheets cannot be resubmitted. Borrowers must create new term sheets if rejected.
- Change requests allow borrowers to update and resubmit. This enables iterative improvement without starting over.
- Your decision affects facility setup workflow. Approval moves to master commitment configuration, rejection stops the process, change requests allow refinement.
- Decisions are final once submitted. You cannot easily reverse decisions after submission.
- Complete audit trail. All decisions, reasons, and comments are recorded with timestamps.
- Borrower notifications. Borrowers receive notifications when you make decisions.
- Status updates reflect decisions. Term sheet status changes based on your decision.
- Review thoroughly before deciding. Take time to evaluate all aspects before making decisions.

## What Happens Next

After reviewing a term sheet:

- **If Approved:** Master commitment is automatically created with Draft status, you configure the facility structure, you submit master commitment for lender approval, facility becomes active when lenders approve, and borrowers can create funding requests.
- **If Rejected:** Borrower receives rejection reason, borrower can create a new term sheet addressing issues, new term sheet goes through same review process, and process can start over with improvements.
- **If Changes Requested:** Borrower receives change request details, borrower updates term sheet with requested changes, borrower resubmits for your review, you review again and make new decision, and process can repeat until approved or rejected.

After approval:

- Master commitment is automatically created with Draft status
- You configure facility rules, borrowing base, and lender groups
- You submit master commitment for lender approval
- Lenders review and approve the facility
- Facility becomes active, and borrowers can create funding requests

Understanding term sheet review helps facility agents effectively evaluate proposals, ensure facility requirements are met, make informed decisions, and move facilities through the setup workflow to active status.

# Facility Creation

Learn how facility agents configure master commitments after they're automatically created

## Overview

Facility creation is the process where facility agents configure master commitments after they're automatically created from approved term sheets. This guide covers how to set up facility rules, configure lender groups, define borrowing base calculations, and complete facility setup to prepare facilities for lender approval and activation.

## Who Can Use This

- Facility Agents who configure master commitments after term sheet approval

## When This Is Used

Use facility creation when:

- Term sheet has been approved by you
- Master commitment is automatically created
- You need to configure facility rules and parameters
- You want to set up lender groups and participation
- You're preparing facility for lender approval

## Step-by-Step Process

### Accessing Master Commitment

#### 1. Locate Master Commitment

- Navigate to master commitments section

- Find master commitment created from approved term sheet
- Status shows as "Draft"
- Master commitment is pre-populated with term sheet data

## 2. Review Pre-populated Information

- Review term sheet data that was transferred
- Verify facility name, amount, and basic terms
- Check that information is correct
- Understand what needs to be configured
- **Check Contract Type** - Review whether the facility uses a single contract or multiple contracts. This determines whether you'll configure one master commitment or create sub-commitments for different lenders.

Create Facility - FA

## Understanding Contract Types

**Single Contract Type** - When the facility uses a single contract, all lenders participate under one master commitment. You configure one set of lender groups, and all lenders review and approve the same master commitment. This is the standard approach for most facilities where all lenders work together under a single agreement.

**Multiple Contract Type** - When the facility uses multiple contracts, you can create separate sub-commitments from the parent master commitment. This is useful when different lenders need separate legal contracts or when the facility needs to be split into multiple sub-facilities under one master facility. Each sub-commitment inherits all terms from the parent but starts with empty lender groups, allowing you to configure different lenders for each sub-commitment. Each sub-commitment can be independently submitted to lenders and activated.

**When to Use Multiple Contracts** - Use multiple contracts when:

- Different lenders require separate legal contracts
- The facility structure needs to be split into multiple sub-facilities
- Different lender groups need separate agreements under one master facility
- Legal or regulatory requirements necessitate separate contracts

**Working with Multiple Contracts** - If the contract type is "multiple", you'll first configure the parent master commitment with all facility rules and parameters. Then you can create sub-commitments from the parent, each with its own lender groups. When you submit the parent master commitment, all associated sub-commitments are also submitted for lender approval.

## Configuring Facility Rules

### 1. Set Up Borrowing Base Calculations

- Navigate to Borrowing Base section
- Select calculation method
- Define how borrowing base is calculated
- Set calculation parameters and formulas
- Configure advance rates
- Set borrowing limits

### 2. Define Collateral Eligibility Rules

- Go to Collateral Rules section
- Set eligibility criteria for collateral
- Define collateral quality requirements

- Set age and geographic limits
- Configure other eligibility criteria
- Define valuation methods

### 3. **Configure Facility Parameters**

- Go to Facility Parameters section
- Set operational parameters
- Configure reporting requirements
- Set up covenant templates
- Define monitoring requirements
- Complete all required parameters

### 4. **Set Up Other Rules**

- Configure drawdown frequency rules
- Set utilization limits
- Define payment terms
- Set interest rate structure
- Configure fee calculations
- Complete all facility rules

## **Setting Up Lender Groups**

### 1. **Add Lenders**

- Navigate to Lender Groups section
- Click "Add Lender" button or similar
- Select lender organization from available options
- Enter lender details
- Add lender to group
- Repeat for all lenders

### 2. **Configure Lender Details**

- Set commitment amount for each lender
- Configure voting percentages

- Set lender-specific terms if applicable
- Define participation percentages
- Complete lender configuration
- Verify all lenders are configured

### 3. **Review Lender Configuration**

- Review all lender details
- Verify commitment amounts total correctly
- Check participation percentages
- Ensure all lenders are included
- Confirm configuration is complete

## **Creating Sub-Commitments (Multiple Contract Type Only)**

### 1. **Create Sub-Commitment**

- If contract type is "multiple", navigate to create sub-commitment option
- Click "Create Sub-Commitment" or similar button
- System creates a new sub-commitment from the parent
- Sub-commitment inherits all facility rules and parameters
- Sub-commitment starts with empty lender groups

### 2. **Configure Sub-Commitment Lender Groups**

- Navigate to the sub-commitment you created
- Add lenders specific to this sub-commitment
- Configure commitment amounts and participation percentages
- Set lender-specific terms if applicable
- Complete lender configuration for this sub-commitment

### 3. **Repeat for Additional Sub-Commitments**

- Create additional sub-commitments as needed
- Configure lender groups for each sub-commitment
- Each sub-commitment can have different lenders
- All sub-commitments share the same facility rules from parent

#### 4. **Review All Sub-Commitments**

- Review all sub-commitments you've created
- Verify lender groups are correctly configured
- Ensure all sub-commitments are ready for submission
- Check that all required fields are complete

### **Completing Facility Setup**

#### 1. **Review All Configuration**

- Review facility rules and parameters
- Check borrowing base configuration
- Verify collateral eligibility rules
- Review lender group configuration
- Ensure all required fields are complete
- If multiple contract type, review all sub-commitments

#### 2. **Validate Configuration**

- Check that validation passes
- Verify all required fields are filled
- Ensure calculations are correct
- Confirm setup status shows "Completed"
- Review everything one final time

#### 3. **Submit for Lender Approval**

- Click "Submit" or "Create" button
- Confirm submission action
- Status changes to "Pending Lender Approval"
- If multiple contract type, all sub-commitments are also submitted
- Lenders receive notifications
- Facility is ready for lender review

### **Rules & Validations**

- You must complete all required fields before submission - incomplete configurations cannot be submitted.
- At least one lender must be configured - facilities require at least one lender to proceed.
- Facility rules must be complete - all rules, calculations, and parameters must be configured.
- Validation must pass before submission - system validates configuration before allowing submission.
- Once submitted, editing is restricted - make sure configuration is correct before submission.
- Setup status must show "Completed" - you cannot submit until setup is complete.
- Master commitment is pre-populated - term sheet data is automatically transferred, so you don't need to re-enter it.
- You can save multiple times - save your progress as you configure, status remains "Draft" until submission.
- Status controls actions - you can only edit while status is "Draft".
- Complete audit trail - all configuration changes are recorded with timestamps.
- Contract type determines structure - single contract type uses one master commitment, multiple contract type allows sub-commitments.
- Sub-commitments require parent - you can only create sub-commitments if the parent master commitment has contract type "multiple".
- Sub-commitments inherit parent rules - all facility rules and parameters are inherited from parent, but lender groups start empty.
- All sub-commitments submit together - when you submit a parent master commitment with multiple contract type, all associated sub-commitments are also submitted.

## What Happens Next

After configuring master commitment:

- You submit for lender approval
- Status changes to "Pending Lender Approval"

- Lenders receive notifications
- Lenders review master commitment
- Any lender approval activates the facility
- Facility becomes active when approved
- Borrowers can create funding requests

After lender approval:

- Facility status changes to "Active"
- Facility is operational and ready for use
- Borrowers can create funding requests
- Facility agent can manage active facility
- Drawdowns can begin

Understanding facility creation helps facility agents effectively configure master commitments, set up complete facility structures, and prepare facilities for lender approval and activation.

# Deal Setup and Calculations

Learn how facility agents configure borrowing base calculations and facility parameters

## Overview

Deal setup and calculations involve configuring the financial modeling, borrowing base calculations, and facility parameters that determine how the credit facility operates. This guide covers how facility agents set up these calculations to ensure proper facility operation and accurate borrowing capacity determination.

**Deals Management** - The deals table provides a comprehensive view of all deals, allowing you to review deal details, track progress, and manage deal-related activities.

## Who Can Use This

- Facility Agents who configure facility calculations and parameters

## When This Is Used

Use deal setup and calculations when:

- You're configuring a master commitment
- You need to set up borrowing base calculations
- You want to define facility parameters
- You're setting up financial modeling
- You're preparing facility for operation

## Step-by-Step Process

### Setting Up Borrowing Base Calculations

## 1. **Configure Calculation Method**

- Navigate to Borrowing Base section
- Select calculation method (formula-based, rule-based, etc.)
- Define how borrowing base is calculated
- Set calculation parameters
- Configure calculation logic

## 2. **Define Collateral Eligibility**

- Set what types of collateral qualify
- Define collateral quality requirements
- Set age limits for collateral
- Configure geographic limits
- Set other eligibility criteria
- Define how collateral is evaluated

## 3. **Set Advance Rates**

- Set advance rate per collateral type
- Configure rate adjustments based on quality
- Set maximum and minimum advance rate limits
- Define rate calculation methods
- Save rate configuration
- Verify rates are appropriate

## 4. **Configure Borrowing Limits**

- Set maximum borrowing limits
- Define concentration limits
- Configure utilization limits
- Set other borrowing restrictions
- Complete borrowing base setup

## **Configuring Facility Parameters**

### 1. **Set Financial Parameters**

- Configure interest rate structure
- Set fee calculations (commitment fees, facility fees, etc.)
- Define payment terms and schedules
- Set drawdown limits and restrictions
- Configure other financial parameters

## 2. **Configure Utilization Tracking**

- Set up utilization calculations
- Define available capacity tracking
- Configure utilization percentage calculations
- Set up capacity monitoring
- Define how utilization is reported

## 3. **Set Up Reporting Requirements**

- Configure reporting frequency
- Define required reports
- Set up report templates
- Configure reporting deadlines
- Complete reporting setup

## 4. **Configure Monitoring Requirements**

- Set up covenant monitoring
- Define monitoring frequency
- Configure alert thresholds
- Set up monitoring reports
- Complete monitoring setup

## **Validating Calculations**

### 1. **Review Calculation Setup**

- Review all calculation configurations
- Verify formulas are correct
- Check parameters are appropriate

- Ensure calculations are complete

## 2. **Test Calculations**

- Test borrowing base calculations
- Verify advance rates work correctly
- Check utilization calculations
- Validate all calculation logic
- Ensure calculations produce expected results

## 3. **Verify Configuration**

- Verify all required fields are complete
- Check that validation passes
- Ensure setup status shows "Completed"
- Review everything one final time

## **Rules & Validations**

- Borrowing base calculations must be configured - facilities need borrowing base to determine available capacity.
- Collateral eligibility rules must be defined - you must specify what collateral qualifies.
- Advance rates must be set for each collateral type - rates determine how much can be borrowed against collateral.
- Facility parameters must be complete - all operational parameters must be configured.
- Calculations must be validated before submission - system validates calculations before allowing submission.
- Setup status must show "Completed" - you cannot submit until setup is complete.
- Calculations affect borrowing capacity - borrowing base determines how much borrowers can draw down.
- Parameters control facility operation - facility parameters govern how the facility operates.
- Complete audit trail - all calculation configurations are recorded.

- Can save multiple times - save your progress as you configure.

## What Happens Next

After setting up calculations:

- Facility is ready for lender approval
- Borrowing base determines available capacity
- Facility parameters control operations
- Calculations are used for funding request reviews
- Facility becomes operational when approved

After facility activation:

- Borrowing base calculations determine available capacity
- Facility parameters govern operations
- Calculations are used when reviewing funding requests
- Utilization is tracked based on calculations
- Facility operates according to configured rules

Understanding deal setup and calculations helps facility agents effectively configure credit facilities, ensure proper operation, and set up accurate borrowing capacity determination for successful facility management.

# Funding Request Review

Learn how facility agents review funding requests and make approval decisions

## Overview

Funding request review is the process where facility agents evaluate borrower funding requests to ensure compliance with facility rules, verify borrowing base availability, and make approval decisions. This guide covers the review process from a facility agent perspective, including how to evaluate requests and make informed decisions.

## Who Can Use This

- Facility Agents who review funding requests submitted by borrowers

## When This Is Used

Use funding request review when:

- Borrowers submit funding requests against active facilities
- You need to evaluate drawdown requests
- You want to approve or reject requests
- You need to ensure facility rules are followed
- You want to verify borrowing capacity availability

## Step-by-Step Process

### Reviewing Funding Requests

#### 1. Access Request

- Check notifications for new funding request submissions
- Navigate to funding requests for review

- Open request details
- Review all information provided

## 2. **Verify Compliance with Facility Rules**

- Check request complies with all facility rules
- Verify amount is within facility limits
- Confirm drawdown frequency rules are followed
- Ensure purpose aligns with facility terms
- Check other facility-specific requirements

## 3. **Check Borrowing Base and Capacity**

- Verify sufficient borrowing capacity is available
- Calculate available capacity based on borrowing base
- Assess request impact on borrowing base
- Check if request exceeds available capacity
- Verify calculations are correct

## 4. **Review Documentation**

- Check all required documents are provided
- Verify document quality and completeness
- Ensure documents support the request
- Confirm documentation meets requirements
- Review document content for accuracy

## 5. **Evaluate Collateral** (if applicable)

- Verify collateral eligibility if facility requires collateral
- Check collateral valuation is accurate
- Confirm collateral is not already pledged
- Ensure collateral concentration is within limits
- Verify collateral meets quality requirements

## 6. **Assess Request Details**

- Review request amount and purpose
- Check funding date is appropriate
- Evaluate borrower's justification

- Assess overall request quality
- Consider facility utilization impact

## Making Review Decisions

### 1. **Approve Request**

- Review thoroughly and verify all requirements met
- Confirm request complies with facility rules
- Verify sufficient capacity is available
- Click "Approve" button or similar
- Enter approval comments if needed
- Confirm approval
- Funding notice is automatically created
- Status changes to "APPROVED"

### 2. **Reject Request**

- Review and identify issues or concerns
- Determine request doesn't meet requirements
- Click "Reject" button or similar
- Provide detailed rejection reason
- Enter comments explaining rejection
- Confirm rejection
- Status changes to "REJECTED"
- Borrower can create new request

### 3. **Request Changes**

- Identify needed modifications
- Determine improvements that would make request acceptable
- Click "Request Changes" button or similar
- Provide detailed change request
- Enter specific modifications needed
- Confirm change request

- Status changes to "CHANGES\_REQUESTED"
- Borrower can update and resubmit

## Rules & Validations

- Requests must comply with all facility rules - any violation results in rejection or change request.
- Request amount cannot exceed available capacity - system validates that amount is within borrowing base limits.
- All required documentation must be provided - missing documents result in rejection or change request.
- Collateral must meet eligibility criteria if applicable - ineligible collateral results in rejection or change request.
- Approved requests automatically generate funding notices - you don't need to create notices manually.
- Rejected requests cannot be resubmitted - borrowers must create new requests if rejected.
- Change requests allow editing and resubmission - borrowers can update requests and resubmit.
- Decisions are final once submitted - you cannot easily reverse decisions after submission.
- Complete audit trail - all decisions, reasons, and comments are recorded with timestamps.
- Borrower notifications - borrowers receive notifications when you make decisions.

## What Happens Next

After reviewing a funding request:

- **If Approved:** Funding notice is automatically created, tokens are generated, facility agent signs for lenders, borrower approves token transfer, lenders review and approve, and funds are transferred.

- **If Rejected:** Borrower receives rejection reason, borrower can create new request addressing issues, new request goes through same review process, and process can start over with improvements.
- **If Changes Requested:** Borrower receives change request details, borrower updates request with requested changes, borrower resubmits for your review, you review again and make new decision, and process can repeat until approved or rejected.

After approval:

- Funding notice is automatically created with "PENDING\_TOKEN\_GENERATION" status
- You generate tokens and sign for lenders
- Borrower approves token transfer
- Funding notice becomes visible to lenders
- Lenders review and approve drawdowns
- Funds are transferred as lenders confirm

Understanding funding request review helps facility agents effectively evaluate requests, ensure facility rules are followed, maintain proper oversight, and make informed approval decisions that protect facility integrity while serving borrower needs.

# Token Generation and E-Sign

Learn how facility agents generate tokens and complete e-signatures for funding notices

## Overview

This guide covers how facility agents generate tokens for funding notices and complete the e-signature process for each lender. Learn how to create tokens, distribute them to lenders, sign funding notices individually for each lender, and track per-lender e-signature status to enable the drawdown process.

## Who Can Use This

- Facility Agents who manage funding notices and complete e-signature processes

## When This Is Used

Use token generation and e-sign when:

- Funding request has been approved by you
- Funding notice needs tokens generated
- You need to sign funding notices for lenders
- You want to complete the drawdown process
- You're preparing funding notice for borrower approval

## Step-by-Step Process

### Generating Tokens

#### 1. Access Funding Notice

- Navigate to approved funding notice

- Verify status shows "PENDING\_TOKEN\_GENERATION" or similar
- Open token distribution section
- Review funding notice details

## 2. Configure Token Distribution

- Review lender groups and participation percentages
- Specify token allocation for each lender
- Set distribution amounts based on lender commitments
- Confirm allocation percentages match facility participation
- Review distribution details for accuracy

## 3. Initialize Token Distribution

- Click "Update Token Distribution" or similar button
- System initializes tokenDistribution array
- Each lender is set with esignatureStatus: 'pending'
- Tokens are created for borrower (FT tokens)
- Status updates to "TOKEN\_GENERATED"

**E-Sign Funding Notice**

Notice ID: FN-20251104-wrdlib

Funding Request ID: FR-10132025-oukv

Requested Amount: 45,000

Funding Date: 12/10/2024

**Lender Details**

| Facility   | Lender | Requested Amount |
|------------|--------|------------------|
| Dummy Deal | Intain | 45,000.00        |

**BB Calculation**

| Description | Value |
|-------------|-------|
|-------------|-------|

Cancel Save

FA - Funding Notice Save - Token Generation

## 4. Verify Token Generation

- Confirm tokens are created successfully
- Verify token distribution is configured correctly

- Check each lender's allocation is accurate
- Ensure status shows tokens are generated
- Review token details

## Completing E-Signatures for Lenders

### 1. Sign for First Lender

- Select first lender from lender list
- Initiate electronic signature process for this lender
- Review funding notice document
- Complete electronic signature for this lender
- Confirm signature is complete
- Lender's esignatureStatus updates to 'ESIGN\_COMPLETED'
- Status remains "TOKEN\_GENERATED"

### 2. Sign for Remaining Lenders

- Select next lender
- Initiate signature process for this lender
- Review funding notice document
- Sign electronically for this lender
- Confirm signature is complete
- This lender's esignatureStatus updates to 'ESIGN\_COMPLETED'
- Continue until all lenders are signed

### 3. Track Signing Status

- View individual lender signing status
- See which lenders have completed signatures (ESIGN\_COMPLETED)
- See which lenders are still pending signatures
- Monitor overall completion progress
- Verify all signatures are complete

### 4. Verify All Signatures Complete

- Check that all lenders have esignatureStatus: 'ESIGN\_COMPLETED'

- Confirm all required signatures are done
- Verify status shows "TOKEN\_GENERATED"
- Ensure funding notice is ready for borrower approval

## After E-Signature Completion

### 1. Borrower Approval Enabled

- After all signatures are complete, borrower can approve token transfer
- Funding notice is ready for borrower review
- Borrower can see token allocation and approve
- Borrower approval makes notice visible to lenders

### 2. Monitor Process

- Track borrower approval status
- Monitor lender review and approval
- Track fund transfer confirmations
- Ensure process progresses smoothly

## Rules & Validations

- Tokens must be generated before signing - you cannot sign until tokens are generated.
- You sign for each lender individually - each lender requires a separate signature process.
- Each lender's signature is tracked separately - `esignatureStatus` field tracks each lender independently.
- All lenders should be signed before borrower approval - complete all signatures to enable smooth process.
- Signing status is tracked per lender - you can see which lenders are signed and which are pending.
- Status remains "TOKEN\_GENERATED" during signing - status doesn't change until borrower approves.

- Electronic signatures are legally binding - signatures represent formal approval for each lender.
- Complete audit trail - all signatures are recorded with timestamps and details.
- Borrower can approve after signatures - borrower approval enables lender visibility.
- Individual tracking - each lender's signature status is tracked independently in tokenDistribution array.

## What Happens Next

After generating tokens and completing signatures:

- Tokens are created and allocated to lenders
- All lender signatures are complete (ESIGN\_COMPLETED)
- Borrower can approve token transfer
- After borrower approval, funding notice becomes visible to lenders
- Lenders can review and approve drawdowns
- Fund transfer process can proceed

After borrower approval:

- Funding notice status changes to "TOKEN\_APPROVED"
- Funding notice becomes visible to lenders
- Lenders receive notifications
- Lenders review and make approval decisions
- Approved lenders transfer funds and confirm

Understanding token generation and e-sign helps facility agents effectively manage funding notices, complete the e-signature process for all lenders, track individual lender signatures, and enable the drawdown process to proceed smoothly.

# Pool and Loan Review

Learn how investors review pools and loans shared with them

## Overview

Pool and loan review is the process where investors and lenders review pools and loans shared with them to evaluate investment opportunities, analyze pool characteristics, assess loan quality, and make informed investment decisions. This guide covers how investors evaluate opportunities and assess risk-return profiles.

## Who Can Use This

- Investors who review pool opportunities for investment
- Lenders who evaluate loan characteristics and pool quality

## When This Is Used

Use pool and loan review when:

- Pools are shared with you for investment opportunities
- You need to evaluate investment potential
- You want to analyze pool characteristics and loan quality
- You're making investment decisions
- You need to assess risk and return profiles

## Review Process

**Accessing Shared Pools** - When issuers share pools with you, you receive notifications. Check notifications for new pool shares, navigate to shared pools or preview queue, open pool details, and review complete pool information.

**Reviewing Pool Information** - Review complete pool information including pool name, asset class, transaction type, description, mapped loans, pool metrics, organization assignments, and current status. Understand the full context of the investment opportunity.

**Analyzing Pool Metrics** - Review total pool balance and size, check number of loans in pool, evaluate weighted average coupon (interest rate characteristics), assess weighted average FICO (credit quality and borrower credit scores), review loan-to-value ratios (collateral characteristics for secured loans), check debt service metrics (payment capacity and service coverage), review geographic distribution (borrower locations and geographic risk), and review all relevant pool statistics and characteristics.

**Reviewing Loan Characteristics** - View individual loan details, assess loan distribution and diversity, evaluate risk characteristics, review performance metrics if available, check loan quality indicators, and assess loan composition.

**Evaluating Investment Opportunity** - Assess investment attractiveness, evaluate risk-return profile, consider return potential, determine fit with your investment criteria, assess marketability and liquidity, and evaluate competitive positioning.

**Reviewing Pool Documentation** - Check pool documentation completeness, review loan data quality, assess supporting materials, verify compliance information, and check data accuracy.

## Evaluation Criteria

**Pool Quality Assessment** - Evaluate overall pool quality, assess loan characteristics and diversity, review pool metrics and statistics, check loan quality indicators, and assess pool composition and structure.

**Risk Profile Evaluation** - Evaluate credit risk, assess concentration risk, review geographic risk, check industry or sector risk, evaluate overall risk-return profile, and determine if risk is acceptable for your investment criteria.

**Investment Attractiveness** - Assess investment appeal, evaluate return potential, review competitive positioning, check marketability and liquidity, and determine if opportunity fits your investment strategy.

**Loan Quality Assessment** - Review individual loan characteristics, assess loan distribution and diversity, evaluate risk characteristics, check loan performance data, and assess overall loan quality.

**Documentation Quality** - Check documentation completeness, verify data quality, review supporting materials, assess compliance information, and ensure documentation meets requirements.

**Overall Opportunity Assessment** - Consider all factors together, evaluate opportunity attractiveness, assess fit with your investment criteria, determine if opportunity should be pursued, and make informed decision.

## Making Decisions

**Express Interest** - Express interest when pool meets your investment criteria: pool quality is acceptable, risk-return profile is attractive, opportunity fits your investment strategy, and you want to pursue the opportunity. Provide feedback or questions to issuer, indicate interest level, request additional information if needed, and communicate your interest to issuer.

**Provide Feedback** - Provide feedback to help issuers improve pools: share observations about pool quality, provide suggestions for improvements, ask questions about pool characteristics, request clarifications if needed, and help issuer improve pool quality.

**Download Information** (if permitted) - Download pool data if sharing permissions allow: export loan details for further analysis, save information for decision making, use downloaded data for evaluation, and perform additional analysis offline.

**Track Pools of Interest** - Mark pools you're interested in, track pool status changes, monitor pool progress, stay informed about updates, and follow pools through workflow.

**Make Investment Decision** - Based on your review, decide whether to pursue the investment opportunity, participate in the deal when it becomes available, or pass on the opportunity. Your review helps inform your investment decision.

## Rules & Validations

- You can only see pools shared with you. You cannot see pools that aren't shared with your organization.
- Download permissions are controlled by issuer. Issuers set whether you can download pool data.
- Feedback permissions are controlled by issuer. Issuers control whether you can provide feedback.
- You can review but cannot modify pools. You have read-only access to shared pools.
- Your review doesn't affect pool status. Your review doesn't change pool workflow status.
- You can express interest without commitment. Expressing interest doesn't obligate you to invest.
- Complete transparency. You can see all pool information that's shared with you.
- Individual decisions. You make your own investment decisions independently.
- Multiple pools can be reviewed. You can review multiple pools simultaneously.
- Review history is maintained. Your reviews and feedback are tracked.

## What Happens Next

After reviewing pools:

- You can express interest or provide feedback
- You can download information if permitted
- Issuer receives your feedback
- You can track pools of interest
- Investment decisions can be made
- You can participate in deals if interested

After expressing interest:

- Issuer knows you're interested
- You may receive additional information
- You can continue reviewing as pool progresses
- You can participate when pool becomes a deal
- Investment opportunities can be pursued

Understanding pool and loan review helps investors effectively evaluate opportunities, assess risk and return profiles, make informed investment decisions, and participate in structured finance transactions that meet their investment criteria.

# Facility Approval

Learn how lenders review and approve master commitments to activate credit facilities

## Overview

Facility approval is the process where lenders review master commitments and approve them, activating the credit facility. This guide covers how lenders evaluate facilities, assess facility structure and terms, and make approval decisions that activate facilities for borrower use.

## Who Can Use This

- Lenders who receive master commitments for approval

## When This Is Used

Use facility approval when:

- Master commitments are submitted for your approval
- You need to evaluate facility proposals
- You want to activate credit facilities
- You're making facility participation decisions
- You're deciding whether to participate in facilities

## Review Process

**Accessing Master Commitments** - When facility agents submit master commitments for lender approval, you receive notifications. Navigate to master commitments for approval, open master commitment details, and review all information provided.

**Review Interface** - The review interface provides comprehensive information about the master commitment, including all facility terms, rules, and lender configuration. You can review the complete facility structure to make informed decisions.

**Reviewing Facility Information** - Review complete facility information including facility terms (amount, interest rates, maturity), facility rules and parameters, borrowing base configuration and calculations, collateral eligibility and valuation methods, lender configuration, and overall facility structure.

**Evaluating Facility Structure** - Review facility amount, interest rates, and maturity, assess facility rules and parameters, review borrowing base configuration and calculations, evaluate collateral eligibility and valuation methods, and assess overall facility structure and complexity.

**Reviewing Lender Configuration** - Check your commitment amount, review your participation percentage, understand voting rights and decision-making, verify lender-specific terms, review other lenders' participation, and assess lender group structure.

**Assessing Facility Setup** - Evaluate facility setup completeness, review calculation methods, check rule definitions, verify configuration quality, and assess facility readiness.

**Evaluating Risk and Return** - Assess facility risk profile, evaluate borrower creditworthiness, review facility terms and conditions, assess return potential, and consider your risk tolerance.

## Evaluation Criteria

**Facility Structure Assessment** - Evaluate facility terms (amount, rates, maturity), assess facility rules and parameters, review borrowing base configuration, check collateral rules and eligibility, and assess overall facility structure.

**Lender Configuration Review** - Verify your commitment amount and participation percentage, understand voting rights and decision-making, review lender-specific terms, check other lenders' participation, and assess lender group structure.

**Facility Setup Quality** - Evaluate facility setup completeness, review calculation methods, check rule definitions, verify configuration quality, and assess facility readiness.

**Risk and Return Evaluation** - Assess facility risk profile, evaluate borrower creditworthiness, review facility terms and conditions, assess return potential, and consider your risk tolerance.

**Overall Facility Assessment** - Consider all factors together, evaluate facility attractiveness, assess fit with your participation criteria, determine if facility should be approved, and make informed decision.

## Making Decisions

**Approve Master Commitment** - Approve when facility meets your criteria: facility structure is sound, terms are appropriate, borrower is creditworthy, facility setup is complete, and risk-return profile is acceptable. Click Approve button, initiate electronic signature process, review master commitment document, complete electronic signature, confirm approval, facility becomes active (if first lender approval), status changes to ACTIVE, and parties receive notifications.

**Reject Master Commitment** - Reject when facility doesn't meet your criteria: facility structure concerns, terms are inappropriate, borrower creditworthiness issues, facility setup problems, or risk-return profile unacceptable. Click Reject button, provide rejection reason if needed, enter comments explaining rejection, confirm rejection, your rejection doesn't prevent other lenders from approving, and parties receive notifications.

**Decision Documentation** - Ensure all decisions are properly documented, provide clear reasons for decisions, include relevant comments or explanations, and maintain complete audit trail of decisions.

## Rules & Validations

- Any lender approval activates the facility. You don't need all lenders to approve before facility becomes active.

- You can only approve master commitments pending approval. You cannot approve facilities that are already active or in other statuses.
- Electronic signature is required for approval. Your approval must be signed electronically for legal validity.
- Once approved, facility becomes active. Facility status changes to Active and borrowers can create funding requests.
- Your approval decision is tracked individually. Each lender's approval status is tracked separately.
- Rejection doesn't prevent activation. Other lenders can still approve and activate the facility.
- Decisions are final once submitted. You cannot easily reverse approval decisions.
- Complete audit trail. All approvals and rejections are recorded with timestamps and details.
- Borrower and facility agent notifications. Parties are notified when facilities are approved and activated.
- Individual tracking. Each lender's approval status is tracked independently.

## What Happens Next

After approving a master commitment:

- Facility becomes active and operational (if first lender approval)
- Status changes to ACTIVE
- Borrowers can create funding requests
- Facility agent can manage active facility
- You can participate in funding
- Facility is fully functional

After facility activation:

- Borrowers create funding requests
- Facility agent reviews and approves requests
- Funding notices are generated

- You review and approve individual drawdowns
- Funds are transferred as you confirm
- Facility operates according to configured rules

After rejection:

- Your rejection is recorded
- Other lenders can still approve
- Facility may become active if other lenders approve
- You don't participate in the facility
- You can participate in future facilities

Understanding facility approval helps lenders effectively evaluate facilities, assess facility structure and terms, make informed participation decisions, and activate credit facilities for borrower use.

# Funding Notice Review

Learn how lenders review funding notices and approve or reject drawdowns

## Overview

Funding notice review is the process where lenders review funding notices after borrower token approval and decide whether to approve or reject individual drawdowns. This guide covers how lenders evaluate funding notices, assess drawdown requests, and make independent approval decisions for each drawdown.

## Who Can Use This

- Lenders who receive funding notices after borrower token approval

## When This Is Used

Use funding notice review when:

- Funding notices become visible after borrower approves token transfer
- You need to review drawdown requests
- You want to approve or reject participation in drawdowns
- You're making drawdown decisions
- You need to evaluate individual funding requests

## Review Process

**Accessing Funding Notices** - When borrowers approve token transfers, funding notices become visible to lenders. Check notifications for new funding notices, navigate to funding notices section, open funding notice details, and review all information provided.

**View Funding Notice**

Notice Summary

Notice ID: FN-20251204-2wpwsj

Funding Request ID: FR-12012025-e1qp

Requested Amount: 450,000.00

Requested Date: 10/31/2025

Token Distribution

| Facility             | Lender        | Amount     | Status  |
|----------------------|---------------|------------|---------|
| Demo Credit Facility | Lender Demo 1 | 450,000.00 | PENDING |

Close

Funding Notice Details - FA

**Reviewing Funding Notice Information** - Review complete funding notice information including request amount, purpose, funding date, facility details, borrower information, token allocation, borrowing base impact, and supporting documentation.

**Evaluating Drawdown Request** - Review total drawdown amount, check what funds will be used for, verify when funds are needed, review facility information and terms, and assess borrower details.

**Reviewing Token Allocation** - Check your allocated token amount, verify your participation percentage, review total drawdown amount, confirm distribution details, and check other lenders' allocations.

**Assessing Facility Impact** - Evaluate borrowing base impact, check utilization after drawdown, review remaining capacity, assess facility health, and evaluate risk factors.

**Reviewing Supporting Information** - Check any supporting documentation, review borrower's justification, assess drawdown appropriateness, and evaluate overall request quality.

## Evaluation Criteria

**Drawdown Request Assessment** - Evaluate request amount and purpose, check funding date appropriateness, review facility details and terms, assess borrower information, and verify request justification.

**Token Allocation Review** - Verify your allocated token amount, check your participation percentage, review total drawdown amount, confirm distribution details, and check other lenders' allocations.

**Facility Impact Evaluation** - Assess borrowing base impact, check utilization after drawdown, review remaining capacity, assess facility health, and evaluate risk factors.

**Supporting Documentation** - Check supporting documentation completeness, review borrower's justification, assess drawdown appropriateness, and evaluate overall request quality.

**Overall Request Quality** - Assess whether request is well-justified, evaluate if purpose is appropriate, check if timing is reasonable, verify borrower's track record, and consider facility utilization impact.

**Risk Assessment** - Evaluate risk factors, assess borrower creditworthiness, review facility health, check utilization levels, and determine if risk is acceptable.

## Making Decisions

**Approve Drawdown** - Approve when request meets your criteria: request is well-justified, purpose is appropriate, timing is reasonable, facility health is good, and risk is acceptable. Click Approve button, confirm approval, your participation is confirmed, you can proceed with fund transfer, your portion of the drawdown is committed, and parties receive notifications.

**Reject Drawdown** - Reject when request doesn't meet your criteria: request concerns, purpose issues, timing problems, facility health concerns, or risk unacceptable. Click Reject button, provide rejection reason if required, enter comments explaining rejection, confirm rejection, your portion will not be funded, other lenders make independent decisions, and parties receive notifications.

**Decision Documentation** - Ensure all decisions are properly documented, provide clear reasons for decisions, include relevant comments or explanations, and maintain complete audit trail of decisions.

## Rules & Validations

- Each lender makes independent decision. Your decision doesn't affect other lenders' choices.
- Your decision doesn't affect other lenders. Other lenders can approve or reject independently.
- You can approve or reject based on your evaluation. Make decisions based on your own criteria and risk tolerance.
- Approved lenders can proceed with fund transfer. If you approve, you can transfer your allocated portion.
- Rejected lenders don't participate in that drawdown. If you reject, you won't fund your portion, but other lenders can still participate.
- Decisions are final once submitted. You cannot easily change your decision after submitting.
- Rejection reasons help borrowers understand. Providing reasons helps borrowers understand lender concerns.
- Individual tracking. Each lender's decision is tracked separately with timestamps and details.
- Borrower visibility. Borrowers can see which lenders approved and which rejected.
- Complete audit trail. All decisions are recorded with who made what decision and when.

## What Happens Next

After making your decision:

- **If Approved:** You can proceed with fund transfer, transfer your allocated portion to the borrower, confirm the transfer, and your participation is complete.

- **If Rejected:** You don't participate in this drawdown, other lenders make their own decisions independently, borrower can see your rejection, and you can participate in future drawdowns.

After all lenders decide:

- Approved lenders transfer funds and confirm transfers
- Borrower receives funds from approved lenders
- Drawdown process completes as transfers are confirmed
- Borrower can track which lenders participated
- Complete documentation is maintained

Understanding funding notice review helps lenders make informed decisions on drawdowns, participate effectively in credit facilities, manage their participation based on their own evaluation criteria, and work within the flexible drawdown structure that allows individual lender decisions.

# Funds Transfer Confirmation

Learn how lenders confirm fund transfers to complete drawdowns

## Overview

Funds transfer confirmation is the final step where lenders confirm they have transferred funds to borrowers, completing the drawdown process for each individual lender. This provides official confirmation that funds have been disbursed and marks lender participation as complete.

## Who Can Use This

- Lenders who have approved funding notice drawdowns and transferred funds

## When This Is Used

Use fund transfer confirmation when:

- You have approved a drawdown
- You have transferred funds to the borrower
- You want to mark the transfer as complete
- You need to finalize your participation in the drawdown
- You want to confirm that funds have been disbursed

## Step-by-Step Process

### Transferring Funds

#### 1. Review Your Approval

- Navigate to the funding notice you approved
- Review your approval status
- Verify your allocated amount

- Confirm you're ready to transfer funds

## 2. **Complete Fund Transfer**

- Transfer your allocated portion to the borrower
- Use the transfer method specified in the facility
- Transfer the exact amount of your allocation
- Ensure transfer is successful
- Keep transfer confirmation details (transaction ID, reference number, etc.)

## 3. **Verify Transfer Success**

- Confirm funds were transferred successfully
- Verify transfer amount matches your allocation
- Check that transfer was completed
- Ensure you have transfer confirmation details
- Note any transfer reference numbers or IDs

## Confirming Transfer

### 1. **Access Confirmation Function**

- Navigate to the funding notice
- Review your approval status
- Find the fund transfer confirmation section
- Access the confirmation interface

### 2. **Review Transfer Details**

- Verify you've transferred funds
- Check transfer amount matches your allocation
- Confirm transfer was successful
- Review transfer date and time
- Verify transfer reference information

### 3. **Enter Confirmation Details**

- Enter transfer confirmation details if required
- Add transfer reference number or transaction ID

- Include any relevant transfer information
- Add confirmation note if needed
- Verify all details are accurate

#### 4. **Submit Confirmation**

- Click "Confirm Fund Transfer" button or similar
- Review your confirmation details
- Confirm the confirmation action
- Submit your confirmation
- Status updates to show transfer confirmed

#### 5. **Verify Confirmation**

- Confirm status shows transfer is confirmed
- Verify your participation is marked complete
- Check that confirmation is recorded
- Ensure borrower can see your confirmation

### **After Confirmation**

#### 1. **Participation Complete**

- Your participation in the drawdown is marked complete
- Drawdown process is finished for your portion
- Status shows transfer confirmed
- Your contribution is documented

#### 2. **Borrower Receives Funds**

- Borrower receives your transferred funds
- Borrower can see your confirmation
- Borrower can track which lenders have confirmed
- Borrower knows funds have been received

#### 3. **Process Completion**

- As other lenders confirm, drawdown progresses
- Borrower receives funds from all confirming lenders

- Drawdown process completes as all transfers are confirmed
- Complete documentation is maintained

## Rules & Validations

- You can only confirm after you've approved the drawdown - you must approve before you can confirm transfer.
- You should transfer funds before confirming - confirm only after you've actually transferred funds to the borrower.
- Confirmation marks your participation as complete - once confirmed, your participation in this drawdown is finalized.
- Each lender confirms independently - you confirm your own transfer, and other lenders confirm theirs separately.
- Your confirmation doesn't affect other lenders - other lenders confirm their transfers independently.
- Confirmation is final - once confirmed, you cannot easily undo the confirmation.
- Transfer details should be accurate - provide correct transfer information for proper documentation.
- Status updates after confirmation - funding notice status reflects your confirmation.
- Complete audit trail - your confirmation is recorded with timestamp and transfer details.
- Borrower visibility - borrowers can see which lenders have confirmed transfers.

## What Happens Next

After confirming fund transfer:

- Your participation is marked complete
- Drawdown process is finished for your portion
- Status shows transfer confirmed
- Borrower receives your funds
- Borrower can see your confirmation

- Process continues as other lenders confirm
- Drawdown completes as all transfers are confirmed

After all lenders confirm:

- Borrower has received funds from all confirming lenders
- Drawdown process is complete
- Complete documentation is maintained
- Borrower can track all confirmations
- Facility utilization is updated
- Drawdown is fully documented

Understanding funds transfer confirmation helps you complete the drawdown process, finalize your participation in credit facility drawdowns, provide proper documentation that funds have been disbursed, and ensure complete transparency in the fund transfer process.

# All Pool States Explained

Understand all possible pool statuses and what each means

## Overview

This comprehensive reference guide explains all possible pool statuses in the platform. Understanding these statuses helps you know where your pool is in the workflow, what actions are available, and what to expect at each stage. Each status represents a specific stage in the pool's journey from creation to deal completion, and understanding them helps you navigate the pool lifecycle effectively.

## Lifecycle Overview

Pools progress through a structured sequence: they begin as **Created** when you first create them, move to **Preview** when shared with other parties, advance to **Mandate Pending** when submitted to a market maker, and finally reach **Deal** status when the market maker accepts the mandate and finalizes the transaction. This progression ensures that pools move through proper stages with appropriate reviews and approvals at each step.

The lifecycle is designed to support collaboration—you create and prepare pools, share them for review, submit them for structuring, and finalize them as completed deals. Each stage has specific purposes and allows different types of actions, ensuring that pools progress correctly through the structured finance workflow. Understanding this lifecycle helps you know what to expect and how to navigate the process effectively.

## Status Meanings

**Created** - The pool has been created with basic information and is visible only to you, the creator. This is the initial stage where you prepare the pool, add loans, and configure settings before sharing. Pools in Created status are private to you and allow full editing capabilities.

**Preview** - The pool has been shared with other organizations for review. Recipients can view and analyze the pool, and you can continue making changes based on feedback. Pools in Preview status are visible to shared parties and enable collaboration and review.

**Mandate Pending** - The pool has been submitted to a market maker for mandate review. The market maker is deciding whether to accept the mandate to structure the deal. Pools in Mandate Pending status are waiting for market maker decisions and have restricted editing capabilities.

**Deal** - The market maker has accepted the mandate, and the pool is finalized and structured. The transaction is committed, and editing is restricted. Pools in Deal status represent finalized transactions ready for execution.

## What Each Status Indicates

**Created Status** indicates that you're still preparing the pool privately. You can edit freely, add or remove loans, configure sharing settings, and make changes as needed. The pool is not yet visible to other parties. This status tells you that the pool is in its early stages and not yet ready for external review or collaboration. You have full control and can work on the pool without restrictions.

**Preview Status** indicates that the pool is being reviewed by other parties. Recipients can view and analyze, provide feedback, and request changes. You can continue editing and responding to feedback. The pool is visible to shared parties. This status tells you that collaboration has begun and the pool is moving toward structuring. Multiple parties can work together while you maintain editing capabilities.

**Mandate Pending Status** indicates that a formal request has been made to a market maker to structure the deal. The market maker is evaluating whether to accept. You're waiting for the market maker's decision. This status tells you that the pool is at a critical decision point and you're waiting for the market maker's response. Editing is typically restricted while waiting for the decision.

**Deal Status** indicates that the transaction is finalized and committed. The pool is structured, editing is restricted, and ongoing activities are managed separately. This status tells you that the pool has reached its final state and the deal is complete. The pool is ready for execution and ongoing management.

Understanding all pool states helps you navigate the platform effectively, know what actions are available at each stage, track your pool's progress from creation to deal completion, understand what each status means for your workflow, and work efficiently within the pool lifecycle system.

# All Loan States Explained

Understand all possible loan statuses and what each means

## Overview

This comprehensive reference guide explains all possible loan statuses across different status fields. Loans have multiple status fields that track different aspects of their lifecycle, including mapping status, workflow status, and pool status. Understanding these statuses helps you track where loans are in the process, know what actions are available, and manage loans effectively throughout the structured finance workflow.

## Lifecycle Overview

Loans progress through multiple status dimensions: they start as **Unmapped** when uploaded, move to **Mapped** when assigned to a pool, may progress through **Submitted** and **Verified** during processing, potentially reach **Minted** if tokenization is required, and may be **Removed** from pool calculations if needed, with the option to be **Reinstated** later. This progression ensures that loans move through proper stages with appropriate processing and validation at each step.

The lifecycle is designed to support loan management—you upload loans, assign them to pools, they go through verification and processing, and they may be tokenized or removed as needed. Each stage has specific purposes and allows different types of actions, ensuring that loans progress correctly through the structured finance workflow. Understanding this lifecycle helps you know what to expect and how to navigate loan management effectively.

## Status Meanings

**Unmapped** - The loan has been uploaded into the system but is not yet assigned to any pool. This is the initial stage where loans are available for mapping. Loans in Unmapped status are available for assignment but don't contribute to any pool metrics.

**Mapped** - The loan has been assigned to a pool and is included in pool calculations. The loan contributes to pool metrics and characteristics. Loans in Mapped status are actively participating in pools and affecting pool-level statistics.

**Submitted** - The loan has been included in a batch for verification or other processing. The loan is being reviewed or processed. Loans in Submitted status are moving through verification or processing workflows.

**Verified** - The loan has been verified and can proceed to next stages such as tokenization. The loan meets quality and compliance requirements. Loans in Verified status have passed verification and are ready for further processing.

**Minted** - An NFT (non-fungible token) has been created for the loan, and the loan is tokenized. This status only applies if tokenization is part of your workflow. Loans in Minted status are represented on the blockchain and ready for blockchain-based transactions.

**Removed** - The loan has been removed from pool calculations but remains visible in the pool. The loan is excluded from metrics but can be tracked. Loans in Removed status are temporarily or permanently excluded from pool calculations.

**Reinstated** - A previously removed loan has been put back into the pool and is included in calculations again. The loan fully participates in the pool. Loans in Reinstated status have been restored to active participation in pools.

## What Each Status Indicates

**Unmapped Status** indicates that the loan is available for assignment but hasn't been mapped to a pool yet. You can map it to a pool, edit information if allowed, or manage it independently. This status tells you that the loan is ready to be included in a pool. You have full control over unmapped loans and can assign them to pools when ready.

**Mapped Status** indicates that the loan is part of a pool and contributing to pool calculations. Pool metrics include this loan, and you can unmap it if needed. This status tells you that the loan is actively participating in a pool. The loan affects pool-level statistics and characteristics.

**Submitted Status** indicates that the loan is being processed or verified as part of a batch. The loan is in a review or processing stage. This status tells you that the loan is moving through verification or processing workflows. You typically need to wait for processing to complete before taking further actions.

**Verified Status** indicates that the loan has passed verification and meets quality standards. The loan can proceed to tokenization or other next stages. This status tells you that the loan is ready for further processing. The loan has met quality and compliance requirements.

**Minted Status** indicates that the loan has been tokenized and an NFT has been created. The loan is now represented on the blockchain. This status tells you that tokenization is complete and the loan is ready for blockchain-based transactions. The loan is fully tokenized and ready for blockchain operations.

**Removed Status** indicates that the loan has been excluded from pool calculations, likely due to data quality issues, not meeting pool criteria, or errors needing correction. The loan remains visible for tracking but doesn't affect pool metrics. This status tells you that the loan is temporarily or permanently excluded from calculations. You can track removed loans and reinstate them when appropriate.

**Reinstated Status** indicates that a previously removed loan has been put back into the pool. The loan is included in calculations again and fully participates in the pool. This status tells you that issues have been resolved and the loan is active again. The loan fully contributes to pool metrics and characteristics.

Understanding all loan states helps you track where loans are in the process, know what actions are available, understand why certain actions are disabled, manage loans effectively throughout the structured finance workflow, and work efficiently within the loan management system.

# Term Sheet, Facility, and Funding Statuses

Understand all statuses for credit facility components

## Overview

This comprehensive reference guide explains all statuses for credit facility components: Term Sheets, Master Commitments (Facilities), Funding Requests, and Funding Notices. Understanding these statuses helps you navigate the credit facility workflow and know what to expect at each stage. Each component has its own status progression that reflects where it is in the workflow, and understanding them helps you work effectively within the credit facility system.

## Lifecycle Overview

Credit facilities involve multiple components that progress through their own lifecycles: **Term Sheets** start as Draft, move through BorrowerSigned and FARReview, and reach Accepted (which triggers master commitment creation). **Master Commitments** are auto-created from approved term sheets, progress from Draft through PendingLenderApproval to Active. **Funding Requests** start as DRAFT, move through FARReview, and reach APPROVED (which triggers funding notice creation). **Funding Notices** are auto-created from approved funding requests, progressing from PENDING\_TOKEN\_GENERATION through TOKEN\_GENERATED to TOKEN\_APPROVED.

The lifecycle is designed to support the credit facility workflow—borrowers propose facilities through term sheets, facility agents structure facilities through master commitments, borrowers request funds through funding requests, and the system manages drawdowns through funding notices. Each component has specific purposes and allows different types of actions, ensuring that facilities progress correctly through the structured workflow. Understanding this lifecycle helps you know what to expect and how to navigate the credit facility process effectively.

## Status Meanings

### Term Sheet Statuses

**Draft** - The term sheet has been created and can be edited freely. It has not been signed or submitted yet. Term sheets in Draft status allow full editing and are not yet ready for submission.

**BorrowerSigned** - The borrower has electronically signed the term sheet. You can preview the signed version, and it's ready for submission. Term sheets in BorrowerSigned status have been signed and can be submitted for facility agent review.

**FAReview** - The term sheet has been submitted to the facility agent for review. The facility agent is evaluating it and will make a decision. Term sheets in FAReview status are under facility agent review and waiting for decisions.

**Accepted** - The facility agent has approved the term sheet. Master commitment is automatically created. Term sheets in Accepted status have been approved and trigger master commitment creation.

**Rejected** - The facility agent has rejected the term sheet. It cannot be resubmitted. Term sheets in Rejected status have been declined and cannot proceed further.

**CHANGES\_REQUESTED** - The facility agent has requested modifications to the term sheet. You can edit and resubmit. Term sheets in CHANGES\_REQUESTED status allow editing and resubmission after changes are made.

### Master Commitment Statuses

**Draft** - The master commitment has been automatically created from an approved term sheet. The facility agent is configuring it. Master commitments in Draft status are being configured and are not yet ready for lender review.

**PendingLenderApproval** - The facility agent has completed configuration and submitted the master commitment for lender approval. Waiting for at least one lender to approve. Master commitments in PendingLenderApproval status are ready for lender review and decision.

**Active** - At least one lender has approved the master commitment, and the facility is operational. Borrowers can create funding requests. Master commitments in Active status are operational and ready for use.

## Funding Request Statuses

**DRAFT** - The funding request has been created but not yet submitted for review. You can edit freely. Funding requests in DRAFT status allow full editing and are not yet ready for submission.

**FARreview** - The funding request has been submitted to the facility agent for review. Waiting for facility agent decision. Funding requests in FARreview status are under facility agent review and waiting for decisions.

**APPROVED** - The facility agent has approved the funding request. Funding notice is automatically created. Funding requests in APPROVED status have been approved and trigger funding notice creation.

**REJECTED** - The facility agent has rejected the funding request. It cannot be resubmitted. Funding requests in REJECTED status have been declined and cannot proceed further.

**CHANGES\_REQUESTED** - The facility agent has requested modifications to the funding request. You can edit and resubmit. Funding requests in CHANGES\_REQUESTED status allow editing and resubmission after changes are made.

## Funding Notice Statuses

**PENDING\_TOKEN\_GENERATION** - The funding notice has been automatically created from an approved funding request. Waiting for facility agent to generate tokens. Funding notices in PENDING\_TOKEN\_GENERATION status are waiting for token generation.

**TOKEN\_GENERATED** - Tokens have been created and distributed. Facility agent can sign for lenders, and borrower can approve token transfer. Funding notices in TOKEN\_GENERATED status have tokens created and are ready for signing and approval.

**TOKEN\_APPROVED** - The borrower has approved token transfer. Funding notice is visible to lenders, and lenders can review and approve drawdowns. Funding notices in TOKEN\_APPROVED status are visible to lenders and ready for lender review.

## What Each Status Indicates

**Term Sheet Statuses** indicate where term sheets are in the proposal and approval process. Draft means you're still preparing, BorrowerSigned means it's ready for submission, FARReview means it's under facility agent review, Accepted means it's approved and triggers master commitment creation, Rejected means it's been declined, and CHANGES\_REQUESTED means modifications are needed before approval. Understanding term sheet statuses helps you know where proposals are in the approval process.

**Master Commitment Statuses** indicate where facilities are in the setup and activation process. Draft means facility agent is configuring, PendingLenderApproval means it's waiting for lender approval, and Active means the facility is operational and ready for funding requests. Understanding master commitment statuses helps you know where facilities are in the setup and activation process.

**Funding Request Statuses** indicate where funding requests are in the review and approval process. DRAFT means you're still preparing, FARReview means it's under facility agent review, APPROVED means it's approved and triggers funding notice creation, REJECTED means it's been declined, and CHANGES\_REQUESTED means modifications are needed before approval. Understanding funding request statuses helps you know where drawdown requests are in the approval process.

**Funding Notice Statuses** indicate where funding notices are in the token generation and lender approval process. PENDING\_TOKEN\_GENERATION means tokens haven't been created yet, TOKEN\_GENERATED means tokens exist and signing can occur, and TOKEN\_APPROVED means borrowers have approved and lenders can review. Understanding funding notice statuses helps you know where drawdowns are in the token and approval process.

Understanding all credit facility statuses helps you track progress through the workflow, know what actions are available at each stage, understand why certain actions are disabled, know what to expect at each status, and work effectively within the credit facility system.

# Status Qualifiers Explained

Understand status qualifiers that provide additional context about item states

## Overview

Statuses in Intain Markets often include qualifiers that provide additional context about the state of an item. Understanding these qualifiers helps you better understand what a status means, what actions are available, and what needs to happen next in the workflow. Qualifiers add meaning to base statuses, clarifying workflow position and indicating what's needed for progression.

## Reference Details

**"Pending" Qualifier** - Examples include Mandate Pending, Pending Lender Approval, Pending Token Generation. This qualifier means the item is waiting for someone to take action. It's in a holding state, waiting for a decision or action from another party. Common scenarios include pools that are "Mandate Pending" waiting for market maker to accept or reject, master commitments that are "Pending Lender Approval" waiting for lender to approve, and funding notices that are "Pending Token Generation" waiting for facility agent to generate tokens. When you see "Pending", it means you're waiting for another party to act.

**"Review" Qualifier** - Examples include FARReview, Under Review, Pending Review. This qualifier means the item is being reviewed by someone. A reviewer is evaluating it and will make a decision. Common scenarios include term sheets that are "FARReview" where facility agent is reviewing, funding requests that are "FARReview" where facility agent is evaluating, and pools that are "Under Review" where market maker or investor is reviewing. When you see "Review", it means someone is actively evaluating the item.

**"Requested" Qualifier** - Examples include Changes Requested, Updates Requested. This qualifier means changes or modifications have been requested. The item needs to be updated before it can proceed. Common scenarios include term sheets with "CHANGES\_REQUESTED" status where facility agent requests modifications, and funding requests with "CHANGES\_REQUESTED" status where facility agent needs changes before approval. When you see "Requested", it means you need to make changes before proceeding.

**"Active" Qualifier** - Examples include Active status for master commitments. This qualifier means the item is operational and ready for use. Common scenarios include master commitments that are "Active" meaning the facility is operational and borrowers can create funding requests. When you see "Active", it means the item is fully operational and ready for use.

**"Approved" Qualifier** - Examples include Approved status for funding requests. This qualifier means the item has been approved and can proceed. Common scenarios include funding requests that are "APPROVED" meaning facility agent has approved and funding notice is created. When you see "Approved", it means the item has passed review and can proceed to the next stage.

**"Rejected" Qualifier** - Examples include Rejected status for term sheets and funding requests. This qualifier means the item has been rejected and cannot proceed. Common scenarios include term sheets that are "Rejected" meaning facility agent has declined, and funding requests that are "REJECTED" meaning facility agent has declined the request. When you see "Rejected", it means the item has been declined and cannot proceed further.

**"Signed" Qualifier** - Examples include BorrowerSigned status for term sheets. This qualifier means the item has been electronically signed. Common scenarios include term sheets that are "BorrowerSigned" meaning the borrower has signed electronically. When you see "Signed", it means electronic signatures have been completed.

**"Generated" Qualifier** - Examples include TOKEN\_GENERATED status for funding notices. This qualifier means something has been generated or created. Common scenarios include funding notices that are "TOKEN\_GENERATED" meaning tokens have been created. When you see "Generated", it means the system has created something needed for the process.

## Important Notes

**Qualifiers Clarify Workflow Position** - Qualifiers tell you where the item is in its workflow and what's happening. They help you understand the current state more precisely than base statuses alone. Understanding qualifiers helps you know exactly where items are in their journey.

**Qualifiers Indicate What's Needed** - Qualifiers show what action is required or what's waiting to happen. They guide you on what needs to happen next for the workflow to progress. Understanding qualifiers helps you know what actions are needed.

**Qualifiers Explain Action Availability** - Qualifiers help explain why certain actions are enabled or disabled. Understanding qualifiers helps you know what you can and cannot do. When actions are disabled, qualifiers often explain why.

**Qualifiers Guide Next Steps** - Qualifiers indicate what needs to happen next for the workflow to progress. They help you understand what to expect and what to prepare for. Understanding qualifiers helps you plan next steps.

**Multiple Qualifiers Possible** - Some statuses may have multiple qualifiers or be combined with other status information. Understanding how qualifiers combine helps you interpret statuses accurately. Some items may have complex statuses with multiple qualifiers.

**Qualifiers Are Consistent** - The same qualifiers mean the same thing across different item types. Once you understand a qualifier, you can apply that understanding to other contexts. This consistency helps you navigate the platform effectively.

**Qualifiers Change with Workflow** - Qualifiers change as items progress through workflows. Understanding how qualifiers change helps you track progress and know what to expect. Status progression often involves qualifier changes.

**Qualifiers Support Decision Making** - Qualifiers provide information that helps you make decisions about what actions to take. Understanding qualifiers helps you know when to act and when to wait. This information supports effective decision-making.

Understanding status qualifiers helps you interpret statuses more accurately, know what actions are available, understand what needs to happen next, navigate workflows more effectively, and work efficiently within the platform's status system.

# Enabled vs Disabled Actions

Understand why actions are enabled or disabled and what you can do about it

## Overview

Understanding why actions are enabled or disabled helps you know what you can do and why certain actions aren't available. The platform automatically enables or disables actions based on your role, the item's status, and whether prerequisites are met. This guide explains the logic behind enabled and disabled buttons and actions, helping you understand workflow requirements and what needs to happen to enable actions.

## Roles Covered

This applies to all platform users who see enabled or disabled action buttons, regardless of role. The same logic applies to all roles, though specific actions vary by role. Whether you're an issuer, market maker, investor, facility agent, lender, or any other role, the principles of enabled and disabled actions are the same.

## What Each Role Can Do

All roles follow the same principles for enabled and disabled actions, though the specific actions available vary by role:

**When Actions Are Enabled** - Actions are enabled when you have permission, the status allows it, and all prerequisites are met. Enabled buttons mean you can take the action now, workflow can progress, all requirements are satisfied, and you have permission for the action. When you see an enabled button, you can proceed with confidence that the action is appropriate and allowed.

**When Actions Are Disabled** - Actions are disabled when the status doesn't allow it, required information is missing, you're waiting for another party to act, the action was already completed, or you don't have permission. Disabled buttons mean you cannot take the action yet, some requirement prevents the action, workflow is blocked, and you should check tooltips or messages for reasons. When you see a disabled button, check why it's disabled to understand what needs to happen.

**How to Enable Actions** - To enable actions, ensure the item is in the correct status, complete all prerequisites (fill required fields, upload documents, complete previous steps), wait for other parties if needed, verify your role allows the action and you have access, and review requirements to ensure everything is complete. Understanding how to enable actions helps you know what steps to take.

**Common Scenarios** - Common scenarios include waiting for status changes, completing required fields, uploading required documents, waiting for other parties to act, ensuring you have the correct role, and verifying prerequisites are met. Understanding common scenarios helps you identify why actions might be disabled.

## Important Access Notes

**Enabled Buttons Mean You Can Use Them** - If a button is enabled, you can click it and the action will proceed. Enabled buttons indicate that all conditions are met, prerequisites are satisfied, and the action is appropriate for the current state. You can proceed with confidence when buttons are enabled.

**Disabled Buttons Show Reasons** - Hover over disabled buttons or check tooltips to see why they're disabled. The platform typically provides explanations for disabled actions, helping you understand what needs to happen. Always check tooltips or messages to understand why actions are disabled.

**Status Controls Availability** - The current status is the primary factor determining action availability. Status must allow the action for it to be enabled. Understanding how status controls availability helps you know what actions are possible at each stage.

**Prerequisites Must Be Met** - Required information, documents, or previous steps must be complete before actions are enabled. Missing prerequisites disable actions. Understanding prerequisites helps you know what needs to be completed before actions become available.

**Permissions Determine Access** - Your role and permissions control what actions you can take. Even if status allows an action, you may not have permission. Understanding permissions helps you know what actions are available to your role.

**Workflow Order Matters** - Actions must happen in the correct order according to workflow rules. You cannot skip steps or proceed out of sequence. Understanding workflow order helps you know what needs to happen before actions become available.

**Complete Requirements** - All requirements must be met before actions are enabled. Partial completion keeps actions disabled. Understanding complete requirements helps you ensure all prerequisites are met.

**Check Messages** - The platform often shows messages explaining why actions are disabled. Look for notifications or messages that explain restrictions. Checking messages helps you understand why actions might be disabled.

**Status Changes Enable Actions** - When status changes, new actions may become available. Status progression enables new capabilities. Understanding how status changes enable actions helps you know when new capabilities become available.

**Individual Tracking** - Each user's permissions and access are tracked individually. Your enabled/disabled actions reflect your specific role and access. Understanding individual tracking helps you know that your actions are specific to your role and permissions.

**Role and Status Together** - Both your role and the item's status determine what actions are available. You need both permission and appropriate status. Understanding how role and status work together helps you know what actions are available.

**Waiting for Others** - Some actions require other parties to act first. You may need to wait for approvals, submissions, or other actions before you can proceed. Understanding when you need to wait helps you know what to expect.

**Previous Actions Required** - Some actions require previous actions to be completed first. You cannot skip steps or proceed without completing prerequisites. Understanding previous actions required helps you know what needs to happen first.

**Document Requirements** - Some actions require documents to be uploaded or signed before they're enabled. Missing documents disable actions. Understanding document requirements helps you know what documents are needed.

**Field Requirements** - Some actions require specific fields to be filled before they're enabled. Missing or incomplete fields disable actions. Understanding field requirements helps you know what information is needed.

Understanding enabled vs disabled actions helps you navigate the platform effectively, know what you can do and why, understand what needs to happen to enable actions, and work efficiently within workflow requirements. This understanding enables you to use the platform effectively and know when actions are available and when they're not.

# Why Approvals Exist

Understand the purpose and importance of approvals in the platform

## Overview

Approvals are fundamental to how Intain Markets operates. They serve as quality gates, compliance checkpoints, and authorization mechanisms that ensure transactions progress correctly while protecting all parties involved. Understanding why approvals exist helps you appreciate their value, understand their purpose, and work effectively within the approval-driven workflow structure that ensures quality, compliance, and proper authorization throughout structured finance transactions.

## How the Platform Is Designed

The platform is designed with the understanding that structured finance transactions involve significant commitments, financial risk, and regulatory requirements. Approvals are built into the workflow architecture as required checkpoints where authorized parties must review and authorize items before they can proceed to the next stage. These approvals are not optional suggestions—they are mandatory gates that ensure proper review, authorization, and quality assurance.

**Approvals as Mandatory Gates** - Approvals enforce quality standards, maintain compliance, protect all parties, create accountability, enable improvement, and control workflow progression:

- **Enforce quality standards** - Items are reviewed by qualified parties before proceeding, ensuring they meet quality requirements. Reviewers examine items thoroughly, identify issues early, and ensure that only quality items proceed to commitment stages.
- **Maintain compliance** - Regulatory requirements and business rules are verified before commitment. Reviewers assess compliance, ensuring that transactions meet all necessary regulatory and business rule requirements before proceeding.

- **Protect all parties** - Approvals ensure all parties agree before proceeding, reducing risk and ensuring alignment. Submitters know their items are reviewed, reviewers can ensure quality, and all parties benefit from structured review processes that protect everyone involved.
- **Create accountability** - Approval decisions are documented and attributed to specific reviewers. This creates accountability and supports compliance requirements, ensuring that decisions are traceable and attributable to specific individuals.
- **Enable improvement** - Reviewers can request changes before approval, allowing iterative improvement. This enables refinement and ensures that items meet requirements before final commitment, rather than requiring rejection and restart.
- **Control workflow progression** - Approvals act as gates that control when items can proceed. Items cannot move to the next stage without required approvals, ensuring that important steps aren't skipped and prerequisites are met.

The platform enforces approvals automatically, ensuring that required approvals happen before items can progress. This structure protects all parties while maintaining workflow efficiency and ensuring that transactions proceed correctly through proper authorization and quality assurance.

## What This Enables for Users

**For Submitters**, approvals ensure that your submissions are reviewed by qualified parties before commitment, protect you by requiring authorization before proceeding, and provide opportunities for feedback and improvement. You can be confident that approved items meet standards and have proper authorization. The approval process also provides opportunities for feedback and improvement before final commitment, enabling you to refine submissions based on reviewer feedback.

**For Reviewers**, approvals give you clear decision points where your review is required, ensure you review items at the appropriate stage, and provide tools to request improvements before approval. You can make informed decisions and ensure quality and compliance. The approval process ensures that you review items when all necessary information is available and at the appropriate stage in the workflow.

**For All Parties**, approvals provide transparency into the review process, ensure quality through structured review, maintain compliance through verification, and create accountability through documented decisions. Everyone can see that items have been properly reviewed and authorized. This transparency builds trust and enables effective collaboration while ensuring that all parties are protected.

The approval structure enables efficient collaboration while maintaining quality, compliance, and proper authorization throughout transactions. This structure protects all parties while ensuring that transactions progress efficiently and correctly through proper review and authorization processes.

## Key Principles to Understand

**Quality Assurance** - Approvals ensure quality by requiring review before proceeding. Qualified parties examine items to ensure they meet standards, identify issues early, and provide opportunities for improvement before final commitment. This quality assurance protects all parties and ensures that only quality items proceed to commitment stages.

**Compliance and Risk Management** - Approvals ensure compliance by verifying that transactions meet regulatory requirements and business rules. Reviewers assess risk before commitment, protecting all parties and ensuring proper authorization. This compliance and risk management protects all parties and ensures that transactions meet all necessary requirements.

**Transparency and Accountability** - Approvals provide transparency by creating visible decision points in workflows. All approval decisions are documented with who approved, when, and why, creating accountability and supporting audit requirements. This transparency and accountability builds trust and enables effective collaboration.

**Workflow Control** - Approvals control workflow progression by acting as gates that ensure proper order and sequence. Items cannot proceed without required approvals, ensuring that important steps aren't skipped and prerequisites are met. This workflow control ensures that transactions progress correctly and efficiently.

**Protection for All Parties** - Approvals protect all parties by ensuring agreement before commitment. Submitters know their items are reviewed, reviewers can ensure quality, and all parties benefit from structured review processes. This protection ensures that all parties are protected throughout the transaction process.

**Collaboration Enablement** - Approvals enable collaboration by creating structured opportunities for feedback and improvement. Reviewers can request changes, submitters can respond, and items can be improved iteratively before final approval. This collaboration enablement ensures that items meet requirements before final commitment.

**Role-Based Authority** - Different roles have authority to approve different items at different stages. This ensures proper authorization and maintains workflow integrity by ensuring the right people review the right items at the right time. This role-based authority ensures that approvals happen at the appropriate stage by the appropriate parties.

**Documented Decisions** - All approval decisions are recorded with timestamps, reviewer information, and any comments or reasons. This creates complete audit trails for compliance and accountability purposes. This documentation ensures that all decisions are traceable and attributable.

**Sequential Requirements** - Approvals must happen in the correct order. You cannot skip approval steps or proceed without required approvals. This ensures that items progress through proper review sequences. This sequential requirement ensures that transactions progress correctly and efficiently.

**Change Requests vs. Rejection** - Reviewers can request changes (allowing improvement) or reject items (stopping the workflow). This distinction enables iterative improvement while maintaining quality standards. Understanding this distinction helps you know whether you can make changes and continue or need to start fresh.

Understanding why approvals exist helps you appreciate their value in ensuring quality, maintaining compliance, protecting all parties, and creating accountability throughout structured finance transactions. This understanding enables you to work effectively within the approval-driven workflow structure and appreciate how approvals protect all parties while ensuring quality and compliance.

# What Happens After Rejection

Understand what happens when items are rejected and how to proceed

## Overview

When an item is rejected, it enters a final state with specific consequences. Understanding what happens after rejection helps you know what to expect, why you can't edit rejected items, and how to proceed when your submissions are rejected. Rejection is a final decision that stops the workflow for that item, and understanding the consequences helps you respond appropriately and move forward effectively.

## Possible Outcomes

When your submission is rejected, the item enters a final state and cannot proceed further in the workflow. The rejection outcome is final—you cannot edit rejected items, you cannot resubmit the same rejected item, and you must create a new item if you want to try again. Understanding these outcomes helps you know what to expect and how to proceed after rejection.

## What Each Outcome Means

**Rejected Status** means the item has been formally rejected and enters a final state. The workflow stops for this item—it cannot proceed further, no further action is possible on the rejected item itself, rejected items become read-only and cannot be modified, you cannot resubmit the same rejected item, and you must create a new item to try again. Rejection decisions are final—there's no appeal process, and you cannot change the status of rejected items. This final state ensures that rejected items remain as records but cannot proceed in the workflow.

**What You Cannot Do After Rejection** - You cannot edit the rejected item (rejected items are locked and cannot be edited), you cannot resubmit the same item (the rejected item cannot be resubmitted—it's final), there's no appeal process (rejection decisions are final), you cannot change the status of rejected items, and the rejected item cannot proceed in the workflow. Understanding these limitations helps you know what's not possible and why.

**What You Can Do After Rejection** - You can still view rejected items to review them, you can see the rejection reason to understand why it was rejected, you can create a new item addressing the rejection reasons, you can learn from rejection feedback to improve future submissions, and you can try again by creating new submissions incorporating lessons learned. Understanding what you can do helps you move forward effectively.

**Rejection Reasons** - Rejection reasons are provided to help you understand why items were rejected. These reasons explain what issues were identified, what requirements weren't met, or what concerns led to rejection. Understanding rejection reasons helps you address issues in new submissions and improve your approach.

## Next Steps for Users

**After Term Sheet Rejection** - Review the rejection reason carefully to understand why the term sheet was rejected. No master commitment is created, so the facility does not proceed. Create a new term sheet that addresses all rejection reasons. Ensure the new term sheet complies with requirements and has all necessary information. Submit the new term sheet and go through the review process again. Learn from the rejection to improve your proposal.

**After Funding Request Rejection** - Review the rejection reason carefully to understand why the funding request was rejected. No funding notice is created, so the drawdown does not proceed. Create a new funding request that addresses all rejection reasons. Ensure the new request complies with facility rules, has sufficient borrowing capacity, and includes all required documentation. Submit the new request and go through the review process again. Address all issues identified in the rejection.

**After Pool Mandate Rejection** - Review the rejection reason to understand why the mandate was rejected. The pool may return to Preview status, allowing you to submit to another market maker. Consider whether to address the rejection reasons before submitting to another market maker. Submit to another market maker if appropriate, or address issues and resubmit to the same market maker if allowed. Learn from rejection feedback to improve pool quality.

**General Approach** - Always review rejection reasons carefully to understand what went wrong. Learn from rejections to improve future submissions. Create new items that address all rejection reasons. Ensure new submissions comply with all requirements and have all necessary information. Be prepared to go through the review process again with new submissions. Use rejection feedback as learning opportunities to improve your approach.

**Learning from Rejections** - Rejections provide valuable feedback about what needs improvement. Use rejection reasons to understand requirements better. Address all issues identified in rejections when creating new items. Improve your submissions based on rejection feedback. Build on lessons learned to create better submissions in the future.

Understanding what happens after rejection helps you know what to expect, understand why you can't edit rejected items, know how to proceed when submissions are rejected, learn from rejections to improve future submissions, and work effectively within the rejection process.

# Feedback vs Rejection

Understand the difference between change requests and rejections

## Overview

Understanding the difference between feedback (change requests) and rejection helps you know how to respond and what to expect. Both are part of the review process but have different implications for your workflow and how you proceed. Change requests allow improvement and resubmission, while rejection is a final decision requiring a new item. Understanding this distinction helps you respond appropriately and move forward effectively.

## Possible Outcomes

When reviewers provide input, there are two types: **Change Requests (Feedback)** - less severe, reviewers want modifications but the item can be improved and resubmitted, and **Rejection** - more severe, reviewers have decided the item cannot proceed, and you must create a new item to try again. Understanding these outcomes helps you know what to expect and how to respond.

## What Each Outcome Means

**Change Requests (Feedback)** are requests for modifications to improve the item. Issues can be fixed through editing, it's an iterative improvement process, it's not a final state—the item can proceed after changes, and it's an opportunity to refine and improve. When changes are requested, status changes to show changes are requested (e.g., "CHANGES\_REQUESTED"), the item becomes editable again, you can make modifications, you can save multiple times while working, and you can resubmit when changes are complete. The outcome is that the item can be improved and resubmitted, the process can continue after changes, iterative improvement is possible, multiple rounds of changes are allowed, and the item can eventually be approved. Change requests enable refinement and improvement rather than requiring starting over.

**Rejection** is a final decision that the item will not proceed. The item cannot be fixed through editing, it's a final state—the process stops here, you must create a new item to try again, and it's more severe than change requests. When an item is rejected, status changes to "Rejected" or "REJECTED," the item becomes read-only, it cannot be edited, it cannot be resubmitted, and the process stops for this item. The outcome is that the item cannot proceed, you must create a new item to try again, the rejected item remains as a record, and you can learn from rejection feedback for future submissions. Rejection requires starting fresh with a new item.

**Key Differences** - Change requests allow editing and resubmission, while rejection does not. Change requests enable iterative improvement, while rejection requires starting over. Change requests are less severe and indicate potential for approval, while rejection is final and indicates the item cannot proceed. Understanding these differences helps you know how to respond.

## Next Steps for Users

**When Changes Are Requested** - Read the change request carefully to understand what specific modifications are needed. Make all requested changes thoroughly and address all requested items. Review your changes before resubmitting to ensure everything is complete. Resubmit when changes are complete—the item will go back to review status. Be prepared for multiple rounds of changes if needed, as iterative improvement is part of the process. Use change requests as opportunities to refine and improve your submissions.

**When an Item Is Rejected** - Review the rejection reason carefully to understand why the item was rejected. Learn from rejection feedback to improve future submissions. Create a completely new item that addresses the issues identified in the rejection. Ensure the new item complies with all requirements and has all necessary information. Try again with improvements, incorporating lessons learned from the rejection. Use rejection feedback to understand requirements better and improve your approach.

**Understanding the Difference** - Change requests mean the reviewer sees potential but needs improvements—you can fix and resubmit. Rejection means the reviewer has decided the item cannot proceed—you must start fresh with a new item. Change requests allow iterative improvement, while rejection requires starting over. Both provide valuable feedback, but they require different responses. Understanding this distinction helps you respond appropriately and move forward effectively.

**Responding Appropriately** - When changes are requested, focus on making improvements and resubmitting. When items are rejected, focus on learning from feedback and creating better new items. Both outcomes provide valuable feedback that helps you improve. Use feedback to refine your approach and create better submissions. Understanding how to respond helps you work effectively within the review process.

Understanding the difference between feedback and rejection helps you respond appropriately, know what to expect from each outcome, understand how to proceed based on the type of feedback received, take appropriate next steps to move your submissions forward, and work effectively within the review and feedback process.

# Who Can Do What

Comprehensive guide to role permissions and what each role can do

## Overview

This comprehensive reference guide explains what each role can and cannot do in the Intain Markets platform. Understanding role permissions helps you know what actions are available to you, what others can do, and why certain actions are unavailable. The platform automatically enforces these permissions, ensuring that you can only take actions appropriate for your role. This guide provides detailed information about role capabilities and limitations across all platform modules.

## Roles Covered

The platform supports multiple roles with distinct permissions, each designed for specific responsibilities in structured finance transactions:

- **Issuer (Borrower)** - Creates pools and credit facility requests. They initiate transactions and manage loan portfolios.
- **Market Maker / Facility Agent** - Structures deals and facilitates transactions. They review opportunities, structure deals, and facilitate transactions between issuers and investors.
- **Investor / Lender** - Provides funding and makes investment decisions. They review opportunities, evaluate investments, and provide capital for transactions.
- **Servicer** - Manages ongoing loan administration. They handle loan servicing, payment tracking, and ongoing administration after deals are completed.
- **Paying Agent** - Handles payment distributions. They manage payment distributions and ensure funds are properly allocated to all parties.
- **Rating Agency** - Analyzes pools for rating purposes. They review pool data, analyze characteristics, and provide ratings for structured finance transactions.
- **Admin** - Manages platform administration. They manage users, configure system settings, and handle platform-level administrative tasks.

## What Each Role Can Do

### Issuer (Borrower)

Issuers create and manage pools, submit credit facility requests, and manage loan portfolios. They are the initiators of transactions and have primary responsibility for creating and managing pools and credit facility requests.

#### **Pools and Loans:**

- Can create pools with basic information, asset class, and transaction type
- Can map loans to pools and manage loan assignments
- Can edit pool information when status allows (Created or Preview status)
- Can share pools with other organizations for review and collaboration
- Can manage loan statuses (map, unmap, remove, reinstate)
- Can respond to feedback and make changes to pools
- Can submit pools for mandate review to market makers
- Can track pool status and workflow progression

#### **Credit Facilities:**

- Can create term sheets proposing new credit facilities with facility terms, amounts, interest rates, and repayment terms
- Can sign term sheets electronically before submission
- Can submit term sheets for facility agent review
- Can respond to change requests on term sheets by updating and resubmitting
- Can create funding requests against active facilities
- Can specify drawdown amounts, purposes, and funding dates
- Can approve token transfers for funding notices
- Can track funding request and funding notice status

#### **Cannot Do:**

- Cannot approve their own term sheets—these require facility agent approval
- Cannot create master commitments—these are automatically created when term sheets are approved
- Cannot approve their own funding requests—these require facility agent approval
- Cannot sign funding notices—facility agents sign on behalf of lenders
- Cannot configure master commitments—this is the facility agent's responsibility
- Cannot approve master commitments—this is the lender's responsibility

## **Market Maker / Facility Agent**

Market Makers and Facility Agents help structure deals and facilitate transactions. They play a crucial role in reviewing opportunities, structuring deals, and facilitating transactions between issuers and investors.

### **Pools:**

- Can review pools shared with them for mandate consideration
- Can accept or reject pool mandates based on evaluation
- Can request changes to pools to improve quality
- Can provide feedback on pools to help issuers improve
- Can structure deals and move pools toward completion
- Can finalize pools as deals after accepting mandates

### **Credit Facilities:**

- Can review term sheets submitted by borrowers
- Can approve, reject, or request changes to term sheets
- Can configure master commitments after they're automatically created
- Can set up facility rules and borrowing base calculations
- Can configure lender groups and participation percentages
- Can review funding requests for compliance with facility rules
- Can verify borrowing capacity and review documentation

- Can approve, reject, or request changes to funding requests
- Can generate tokens for funding notices
- Can sign funding notices for lenders before sending to lenders

**Cannot Do:**

- Cannot create pools—issuers create pools
- Cannot create term sheets—borrowers create term sheets
- Cannot approve master commitments as lenders—lenders approve master commitments
- Cannot create funding requests—borrowers create funding requests
- Cannot approve token transfers—borrowers approve token transfers
- Cannot provide capital—this is the lender's role

**Investor / Lender**

Investors and Lenders provide funding for transactions. They review opportunities, evaluate investments, and make funding decisions based on their investment criteria and risk tolerance.

**Pools:**

- Can review pool previews shared with them for investment opportunities
- Can analyze investment opportunities thoroughly
- Can express interest in pools without commitment
- Can provide feedback on pools to help issuers improve
- Can download pool data (if permissions allow) for further analysis
- Can review loan characteristics and pool metrics
- Can evaluate risk-return profiles

**Credit Facilities:**

- Can review master commitments submitted for approval
- Can approve master commitments via electronic signature

- Can reject master commitments if they don't meet criteria
- Can review funding notices after borrower approves token transfer
- Can approve or reject individual drawdowns independently
- Can confirm fund transfers after approving drawdowns
- Can track facility activity and participation
- Can monitor facility status and borrowing capacity

**Cannot Do:**

- Cannot create pools—issuers create pools
- Cannot create term sheets—borrowers create term sheets
- Cannot create master commitments—these are automatically created
- Cannot create funding requests—borrowers create funding requests
- Cannot configure master commitments—facility agents do this
- Cannot generate tokens—facility agents do this
- Cannot approve term sheets—facility agents approve term sheets
- Cannot approve funding requests—facility agents approve funding requests

**Servicer**

Servicers manage ongoing loan administration after deals are completed. They handle loan servicing, payment tracking, and ongoing administration to ensure loans are properly managed.

**Pools and Loans:**

- Can view pools and loans assigned to them for servicing
- Can manage loan servicing activities
- Can update loan statuses and information
- Can track payments and loan performance
- Can handle ongoing administration tasks
- Can report on loan performance

**Cannot Do:**

- Cannot create pools or loans—they manage existing loans
- Cannot approve facilities or drawdowns—they focus on post-deal administration
- Cannot structure deals—they manage loans after deals are completed
- Cannot make investment decisions—they focus on loan administration

**Paying Agent**

Paying Agents handle payment distributions. They manage payment distributions and ensure funds are properly allocated to all parties according to deal terms.

**Pools and Facilities:**

- Can view pools and facilities assigned to them for payment processing
- Can manage payment distributions
- Can ensure funds are properly allocated
- Can handle payment-related tasks
- Can track payment distributions

**Cannot Do:**

- Cannot create pools or facilities—they handle payment distributions
- Cannot approve facilities or drawdowns—they focus on payment processing
- Cannot structure deals—they handle payments after deals are completed
- Cannot make investment decisions—they focus on payment distribution

**Rating Agency**

Rating Agencies analyze pools for rating purposes. They review pool data, analyze characteristics, and provide ratings for structured finance transactions.

**Pools:**

- Can view pools shared with them for rating analysis
- Can access pool and loan data for analysis
- Can review pool characteristics and metrics
- Can perform rating analysis
- Can download data (if permissions allow) for further analysis

**Cannot Do:**

- Cannot create or modify pools—they analyze existing pools
- Cannot approve facilities or drawdowns—they provide analysis only
- Cannot structure deals—they analyze pools for rating purposes
- Cannot make investment decisions—they provide ratings
- Typically have read-only access—cannot make changes or approvals

**Admin**

Admins have system-level access for platform administration. They manage users, configure system settings, and handle platform-level administrative tasks.

**Platform Administration:**

- Can manage users and organizations
- Can configure system settings
- Can access administrative functions
- Can handle platform-level tasks
- Can manage platform security

**Cannot Do:**

- Typically don't participate in regular business transactions
- Cannot approve business transactions—they manage platform administration
- Cannot create business items—they support platform operation

## Important Access Notes

**Each Role Has Specific Permissions** - You can only perform actions allowed by your role. The platform enforces these restrictions automatically, ensuring that role-based permissions are consistently applied. Understanding specific permissions helps you know what you can do.

**Role Determines Actions** - Even if you can see an item, you may not be able to take certain actions if your role doesn't allow them. Your role controls both visibility and action availability. Understanding how role determines actions helps you know what you can do.

**Specific Role Requirements** - Some actions require specific roles—only facility agents can approve term sheets, only lenders can approve master commitments, etc. Understanding specific role requirements helps you know who can do what.

**Automatic Enforcement** - The platform automatically restricts actions based on your role. You cannot bypass role restrictions. Understanding automatic enforcement helps you appreciate how the platform ensures proper role-based access.

**Role Controls Visibility and Actions** - Your role controls both what you can see and what actions you can take. The platform filters information and actions based on your role. Understanding how role controls visibility and actions helps you know what you can see and do.

**Multiple Roles Possible** - Some users may have multiple roles but must select one role per login session. You can switch roles by logging out and logging back in with a different role. Understanding multiple roles helps you use the platform effectively when you have multiple responsibilities.

**Role-Based Views** - The platform shows you only relevant information based on your role, making navigation simpler. You only see items where you have a role or where items are shared with you. Understanding role-based views helps you know what you can see.

**Action Buttons Are Role-Aware** - Buttons are enabled or disabled based on your role and permissions, not just item status. Both role and status determine action availability. Understanding role-aware actions helps you know what actions are available.

**Complete Audit Trail** - All actions are recorded with role information for accountability and proper attribution. This ensures that actions are traceable to specific roles and users. Understanding audit trails helps you appreciate how the platform maintains accountability.

**Collaboration Between Roles** - Different roles collaborate through workflows—issuers create, market makers structure, lenders fund, servicers manage, etc. Understanding collaboration helps you work effectively with other parties.

**Sequential Responsibilities** - Roles have sequential responsibilities in workflows. Understanding sequential responsibilities helps you know when your actions are needed and how roles work together.

**Independent Decisions** - Some roles make independent decisions (like lenders approving drawdowns). Understanding independent decisions helps you know how certain decisions work.

Understanding role permissions helps you know what actions are available to you, understand what others can do, know why certain actions are unavailable, work effectively within your role's capabilities, and understand how different roles collaborate to complete transactions. This understanding enables effective collaboration and ensures that transactions progress correctly through proper role-based workflows.

# End-to-End Traceability

Understand how the platform tracks all actions and changes for complete audit trails

## Overview

End-to-end traceability means that every action, status change, and decision in Intain Markets can be tracked from beginning to end, with complete records of who did what, when they did it, and what changed as a result. This traceability is built into the platform's architecture, ensuring full transparency, accountability, and compliance support for all transactions. Understanding traceability helps you appreciate how the platform maintains accountability, supports compliance, and provides transparency throughout the transaction lifecycle.

## How the Platform Is Designed

The platform is designed with the principle that complete traceability is essential for structured finance transactions. Every action, status change, approval decision, document upload, and data modification is automatically recorded with attribution, timestamps, and context. This creates comprehensive audit trails that support compliance, enable accountability, and provide transparency for all parties involved in transactions.

**Traceability as a Fundamental Design Element** - Traceability is not an optional feature—it's a fundamental design element that:

- **Records all actions automatically** - You don't need to do anything special—tracking happens automatically for every action. Whether you create a pool, submit a term sheet, approve a funding request, or make any other action, it's automatically recorded with who did it, when, and what changed.
- **Maintains complete history** - All changes are preserved in chronological order, creating complete historical records. You can see how items progressed through their workflows, what changed, when changes occurred, and who was responsible for each change. This history is permanent and cannot be deleted or modified.

- **Attributes actions to users** - Every action is linked to the specific user who performed it, ensuring accountability. You can see exactly who created an item, who approved it, who made changes, and who was responsible for specific decisions. This attribution ensures that all actions are traceable to specific individuals.
- **Captures context** - Status changes, approvals, and modifications are recorded with context about what changed and why. Comments, reasons, and related information are preserved, providing complete context for historical records. This context helps you understand not just what changed, but why it changed.
- **Preserves document versions** - Previous versions of documents are saved when changes are made. This maintains complete document history and enables you to see how documents evolved over time. You can compare versions, see what changed, and understand how documents progressed.
- **Tracks relationships** - Changes to related items are tracked, showing how items affect each other. When a term sheet is approved and a master commitment is created, the relationship is tracked. When a funding request is approved and a funding notice is generated, the relationship is tracked. This relationship tracking shows how items are connected and how changes affect related items.

The platform maintains these records permanently, ensuring that audit trails are complete, accurate, and available for compliance and accountability purposes. This permanent record-keeping ensures that historical information remains available for audits, compliance reviews, and accountability purposes.

## What This Enables for Users

**For All Users**, traceability provides confidence that all actions are recorded, enables you to see what happened and when, and supports accountability by attributing actions to specific users. You can review history to understand how items progressed, who was involved, and what decisions were made. This visibility helps you understand the complete context of transactions and decisions.

**For Compliance and Audit Purposes**, traceability provides complete audit trails that support regulatory requirements, enable internal audits, and demonstrate proper process execution. You can show that transactions followed proper workflows and approvals, that all required steps were completed, and that decisions were made by authorized parties. This compliance support helps you meet regulatory requirements and demonstrate proper governance.

**For Issue Resolution**, traceability helps identify when issues occurred, who was involved, and what changed. This enables faster problem resolution and helps prevent similar issues in the future. You can trace problems back to their source, understand what went wrong, and identify how to prevent similar issues.

**For Transparency**, traceability provides visibility into all relevant activities, enabling parties to see what happened, when it happened, and who was responsible. This transparency builds trust and enables informed decision-making. All parties can see the complete history of transactions and understand how decisions were made.

**For Accountability**, traceability ensures that all actions are attributed to specific users, creating accountability for decisions and actions. This accountability supports proper governance and responsible use of the platform. Users know that their actions are recorded and attributable, which encourages responsible behavior.

The traceability structure enables complete transparency while maintaining security and appropriate access controls. While traceability provides transparency, access to audit trails is controlled based on roles and permissions, ensuring that sensitive information remains appropriately protected while maintaining transparency for authorized parties.

## Key Principles to Understand

**Automatic Recording** - Traceability happens automatically—you don't need to do anything special to enable it. Every action, status change, and decision is recorded without requiring additional steps from users. This automatic recording ensures that nothing is missed and that complete records are maintained.

**Complete History** - All changes are preserved in chronological order, creating complete historical records. You can see how items progressed through their workflows, what changed, and when changes occurred. This complete history provides full context for understanding how transactions evolved.

**User Attribution** - Every action is attributed to the specific user who performed it. This ensures accountability and enables you to see who was responsible for specific actions or decisions. This attribution ensures that all actions are traceable to specific individuals.

**Timestamp Accuracy** - All timestamps are accurate and consistent, using standardized time formats. This ensures that you can accurately determine when events occurred and in what order. This accuracy is essential for understanding the sequence of events and for compliance purposes.

**Status Change Tracking** - Every status change is recorded with who changed it, when it changed, what the previous status was, and what the new status is. This creates complete status progression history. You can see how items moved through their workflows and understand the progression of statuses.

**Action Logging** - All actions are logged with action type, who performed the action, when it occurred, what was affected, and what the result was. This provides complete action history. You can see all actions taken on items and understand what happened and when.

**Activity Details** - You can view detailed activity information by clicking on specific activities, which shows complete context about what happened, who was involved, and when it occurred.

**Audit Trail** - The audit tab provides comprehensive audit trail information, showing all changes, approvals, and actions with complete attribution and timestamps.

**Document Versioning** - Previous versions of documents are saved when changes are made. This maintains complete document history and enables you to see how documents evolved over time. You can compare versions, see what changed, and understand how documents progressed.

**Permanent Records** - Audit trails are permanent and cannot be deleted or modified. This ensures that historical records remain accurate and available for compliance and accountability purposes. This permanence ensures that audit trails remain available for future reference.

**Context Preservation** - Changes are recorded with context about what changed and why. Comments, reasons, and related information are preserved, providing complete context for historical records. This context helps you understand not just what changed, but why it changed.

**Access Control** - While traceability provides transparency, access to audit trails is controlled based on roles and permissions. This ensures that sensitive information remains appropriately protected while maintaining transparency for authorized parties. This access control ensures that traceability provides transparency while maintaining security.

Understanding end-to-end traceability helps you appreciate how the platform ensures accountability, supports compliance, provides transparency, and maintains complete records of all activities for audit, regulatory, and accountability purposes. This understanding enables you to appreciate how the platform maintains accountability and supports compliance throughout the transaction lifecycle.

# Who Changed What and When

Learn how to view and understand change history for items

## Overview

The platform tracks every change with complete details about who made the change, what changed, and when it happened. This guide explains how to view and understand this change history, helping you track item progression, maintain accountability, and understand the complete history of any item. All changes are automatically recorded with attribution and timestamps, ensuring complete traceability and accountability throughout the platform.

## Reference Details

**Status History** - Status history shows all status changes with complete details. Every time an item's status changes, it's recorded with who changed it, when it changed, what the previous status was, what the new status is, and any reason or comments explaining the change. All status changes are shown in chronological order, creating a complete progression history. You can see how items moved through their workflows and understand the sequence of status changes.

**Action History** - Action history shows all actions taken on items. Every action is recorded with what action was taken (create, update, approve, reject, etc.), who performed the action, when the action occurred, what was affected, what the result was, and any additional details about the action. All actions are shown in chronological order, creating a complete action log. You can see all actions taken on items and understand what happened and when.

**Document History** - Document history tracks document-related activities. Document uploads are recorded with when documents were uploaded and by whom. Document changes are recorded with any modifications made. Previous versions of documents are saved, maintaining complete version history. Access tracking may show who accessed documents and when. This history helps you track document-related activities and understand document progression.

**Change Attribution** - Every change is attributed to specific users. You can see who made each change, when they made it, and what changed. This creates complete accountability for all activities and ensures transparency in the platform. User attribution ensures that all changes are traceable to specific individuals, supporting accountability and compliance.

**Timestamp Accuracy** - All timestamps are accurate and consistent, using standardized time formats. This ensures that you can accurately determine when events occurred and in what order. Timestamps are essential for audit trails and compliance purposes. Accurate timestamps help you understand the sequence of events and track progression over time.

**Viewing Change History** - You can view change history by navigating to an item's detail page and looking for history, audit trail, or activity sections. Change history is typically organized chronologically, showing the most recent changes first or in chronological order. You can see complete details about each change, including who made it, when it happened, and what changed. This access helps you understand item progression and track activities.

**Activity View Details** - Clicking on specific activities shows detailed information about what happened, who was involved, and when it occurred.

**Field-Level Changes** - Some systems track field-level changes, showing which specific fields were modified. This provides detailed information about what changed within items. Field-level tracking helps you understand exactly what was modified and how items evolved over time.

**Comment History** - Comments and notes are tracked with who made them and when. This helps you understand the context of changes and decisions. Comment history provides additional context for understanding why changes were made and how decisions were reached.

## Important Notes

**Complete History Is Maintained** - All changes are recorded permanently and cannot be deleted or modified. This ensures that historical records remain accurate and available for audit and compliance purposes. Permanent history supports accountability and compliance requirements.

**User Attribution Is Complete** - Every change is attributed to the specific user who made it. This ensures accountability and enables you to see who was responsible for specific actions or decisions. Complete attribution supports accountability and helps you understand who was involved in item progression.

**Timestamps Are Accurate** - All timestamps use consistent time standards for accuracy. This ensures that you can accurately determine when events occurred and in what order. Accurate timestamps are essential for understanding sequence and timing of events.

**History Cannot Be Modified** - Change history is permanent and cannot be altered. This ensures that audit trails remain accurate and reliable for compliance and accountability purposes. Permanent history ensures that records remain trustworthy and verifiable.

**Complete Transparency** - All relevant parties can see relevant history based on their roles and permissions. This provides transparency while maintaining appropriate security controls. Role-based access ensures that parties see relevant history while maintaining security.

**Chronological Organization** - Change history is organized chronologically, making it easy to see how items progressed through their workflows. This helps you understand the sequence of events and how items reached their current state. Chronological organization helps you track progression and understand workflow evolution.

**Multiple History Types** - Different types of history are tracked—status history, action history, document history, etc. Understanding these different types helps you find the information you need. Multiple history types provide comprehensive tracking of all activities.

**Search and Filter** - Some systems allow searching and filtering of history to find specific changes or events. This helps you locate relevant information quickly. Search and filter capabilities help you find specific information in large history records.

**Export Capabilities** - History may be exportable for reporting and audit purposes. This supports compliance and reporting requirements. Export capabilities help you use history information for reporting and analysis.

Understanding who changed what and when helps you track item progression, maintain accountability, understand complete history, support compliance requirements, ensure transparency in all platform activities, and work effectively within the platform's tracking and accountability system.

# Signature Visibility

Understand who can see signatures and when they're visible

## Overview

Electronic signatures are used throughout Intain Markets for document signing, providing legal validity and complete traceability. Understanding signature visibility helps you know who can see signatures, when they're visible, and how to access signed documents. This ensures you understand how signatures are tracked and who has access to signed documents throughout the workflow, enabling you to access signed documents when needed and understand signature status.

## How to Navigate the Platform

**Accessing Signed Documents** - To view signed documents, navigate to the item (term sheet, master commitment, funding notice) and go to the Documents section. You'll see signed documents listed there, and you can click to view or download them. The platform shows you signed documents based on your role and permissions, ensuring you can access documents relevant to your role.

**Finding Signature Information** - When viewing signed documents, you can see signature details including who signed, when they signed, and signature information. The platform displays this information clearly, showing the complete signature history for the document. This information helps you understand who signed what and when.

**Understanding Visibility Rules** - Signature visibility is controlled by your role and the workflow stage. Different roles can see different signatures at different stages. The platform automatically shows you signatures you're authorized to see based on your role and the document's workflow stage. Understanding visibility rules helps you know what signatures you can see and when.

**Checking Signature Status** - You can check whether signatures are complete by viewing the document's status and signature information. The platform shows you which parties have signed and which signatures are still pending. This status information helps you know where documents are in the signing process.

**Accessing Signature Details** - When viewing signed documents, you can see complete signature details including signer name, organization, timestamp, and signature information. This provides complete transparency about who signed what and when. This detail access helps you understand the complete signing history.

**Role-Based Access** - Signature visibility depends on your role. Different roles see different signatures at different stages. The platform automatically filters signature visibility based on your role, ensuring you only see signatures relevant to your responsibilities. Understanding role-based access helps you know what signatures you can see.

## What You Will See

**After You Sign** - Once you complete a signature, it becomes visible immediately to authorized parties. The signed document is stored securely, and signature completion is tracked with timestamp and signer information. You'll see confirmation that your signature was recorded, and authorized parties can see your signature. This immediate visibility ensures that signatures are available to authorized parties as soon as they're completed.

**Authorized Party Views** - Authorized parties can see signatures based on document type and workflow. For term sheets, borrowers and facility agents can see the borrower's signature. For master commitments, lenders, facility agents, and borrowers can see lender signatures. For funding notices, facility agents, borrowers, and lenders can see relevant signatures. Understanding authorized party views helps you know who can see which signatures.

**Signature Status Indicators** - The platform shows signature status through indicators and badges. You'll see which signatures are complete and which are pending. Status indicators help you understand where documents are in the signing process. These indicators provide quick visual feedback about signature status.

**Complete Documents** - When viewing signed documents, you'll see the complete document with all signatures. The platform displays signatures clearly, showing who signed and when. You can view the full document with all signatures included. This complete document view ensures you can see all signatures on documents.

**Signature History** - The platform maintains complete signature history, showing all signatures on a document with timestamps and signer information. You can see the complete signing history for transparency and audit purposes. This history provides complete traceability of signatures.

**Role-Based Visibility** - Signature visibility is controlled by role and workflow stage. You'll only see signatures you're authorized to see based on your role. Different roles see different signatures at different stages of the workflow. Understanding role-based visibility helps you know what signatures you can see and why.

**Pending Signatures** - You can see which signatures are pending and which parties need to sign. The platform shows pending signatures clearly, helping you understand what needs to happen next. This pending signature visibility helps you track signing progress.

**Completed Signatures** - You can see which signatures are complete and which parties have signed. The platform shows completed signatures with timestamps and signer information. This completed signature visibility helps you understand signing status.

## Helpful Tips

**Signatures Are Permanent** - Once you sign a document, the signature is permanent and cannot be easily undone. Make sure you're ready to sign before completing the signature process. Understanding permanence helps you appreciate the importance of careful signing.

**Check Signature Status** - Before taking actions that depend on signatures, check the signature status to ensure all required signatures are complete. The platform shows you which signatures are pending and which are complete. Checking status helps you know when you can proceed.

**Understand Role-Based Visibility** - Signature visibility depends on your role and the workflow stage. Different roles can see different signatures at different times. Understanding this helps you know what signatures you can see and when. Understanding role-based visibility helps you know what you can access.

**Access Signed Documents** - Signed documents are stored securely and can be accessed through the item's Documents section. Navigate to the item and look for the Documents section to find signed documents. Knowing how to access signed documents helps you find them when needed.

**Complete Audit Trail** - All signatures are recorded with complete information—who signed, when they signed, and signature details. This creates a complete audit trail for compliance and accountability purposes. Understanding audit trails helps you appreciate how signatures support compliance.

**Legal Validity** - Electronic signatures are legally valid and enforceable. Signatures provide legal validity to documents and create binding commitments. Understanding legal validity helps you appreciate the importance of signatures.

**Signature Requirements** - Some documents require signatures before they can proceed to the next stage. Understanding signature requirements helps you know when signatures are needed. Knowing requirements helps you prepare for signing.

**Multiple Signatures** - Some documents require multiple signatures from different parties. Understanding multiple signature requirements helps you know who needs to sign and when. Knowing multiple signature requirements helps you coordinate signing.

**Signature Order** - Some documents require signatures in a specific order. Understanding signature order helps you know when you can sign and when you need to wait. Knowing signature order helps you know when to sign.

**Track Signing Progress** - Monitor signature status to track signing progress. The platform shows you which signatures are complete and which are pending. Tracking progress helps you know where documents are in the signing process.

Understanding signature visibility helps you access signed documents when needed, understand who can see signatures and when, track signature status, and work effectively within the signing workflow. This understanding enables you to use signatures effectively and understand how signature visibility works throughout the platform.

# Token IDs and Timestamps

Understand how tokens are tracked with unique identifiers and timestamps

## Overview

Tokens created for funding notices have unique identifiers and timestamps that enable complete tracking and auditability. Understanding token IDs and timestamps helps you track token creation, distribution, and transfers, ensuring complete transparency in the token-based drawdown process. Each token has a unique ID and all token events are timestamped, providing complete traceability for all token-related activities.

## Reference Details

**Token IDs** - Token IDs are unique identifiers that distinguish each token from other tokens. Each token has a unique ID that enables tracking of individual tokens through their lifecycle. Token IDs link to blockchain records and platform records, helping maintain complete audit trails and enabling token transfers and tracking. Token IDs are permanent and cannot be changed, ensuring consistent tracking throughout the token lifecycle.

**Timestamps** - Timestamps record exactly when events occurred, creating complete chronological records of token activities. Timestamps are essential components of audit trails, help track process progression, and enable verification of when events occurred. Various token events are timestamped, including token creation, token distribution to lenders, borrower approval of token transfer, lender receipt of tokens, token transfers, and all other significant token events. Timestamps use standardized time formats for accuracy and consistency.

**Where Token Information Appears** - Token IDs and timestamps appear in funding notice details, token distribution information showing token allocation with IDs and timestamps, blockchain records linking to token IDs, audit trails showing complete token history, and reports and exports that include token tracking information. This information is accessible throughout the platform where token-related information is displayed.

**How to Access Token Information** - You can access token information by navigating to funding notice details and looking for token information sections. Token distribution arrays show token IDs and allocation details. Blockchain records can be accessed using token IDs for verification. Audit trails show complete token history with timestamps. This access helps you track tokens and verify token information.

**Token Tracking** - Token IDs enable tracking of individual tokens through their entire lifecycle from creation to transfer. Timestamps show when each event occurred, creating a complete timeline of token activities. Combined, token IDs and timestamps provide complete traceability and auditability for all token-related activities. This tracking ensures complete transparency and accountability.

**Blockchain Integration** - Token IDs link to blockchain records, enabling verification on the blockchain. This provides additional security and transparency for token operations. Blockchain records provide immutable verification of token information and activities. Understanding blockchain integration helps you appreciate how tokens are secured and verified.

**Token Distribution Tracking** - Token distribution arrays track how tokens are allocated to lenders. Each lender's allocation includes token IDs and timestamps. This tracking ensures complete transparency in token distribution. Understanding distribution tracking helps you see how tokens are allocated and when distributions occurred.

## Important Notes

**Unique Identification** - Each token has a unique ID that enables tracking and verification. Token IDs are permanent and cannot be changed, ensuring consistent tracking throughout the token lifecycle. Unique identification ensures that tokens can be tracked individually and verified accurately.

**Complete Timestamping** - All significant token events are timestamped, creating complete chronological records. Timestamps are accurate and consistent, using standardized time formats for reliability. Complete timestamping ensures that all token activities are traceable and verifiable.

**Complete Audit Trail** - Token IDs and timestamps create complete audit trails for all token activities. This supports compliance requirements and enables complete transparency in token operations. Complete audit trails ensure that all token activities are documented and traceable.

**Verification Capability** - Token IDs and timestamps enable verification of token information and activities. You can verify when tokens were created, distributed, and transferred using this information. Verification capability helps you confirm token information and activities.

**Blockchain Integration** - Token IDs link to blockchain records, enabling verification on the blockchain. This provides additional security and transparency for token operations. Blockchain integration provides immutable verification and additional security for token operations.

**Permanent Records** - Token IDs and timestamps are permanent records that cannot be modified. This ensures that token history remains accurate and available for audit and compliance purposes. Permanent records ensure that token history remains trustworthy and verifiable.

**Distribution Transparency** - Token distribution arrays show complete allocation details with IDs and timestamps. This ensures transparency in how tokens are distributed to lenders. Distribution transparency helps all parties understand token allocation and distribution timing.

**Complete Lifecycle Tracking** - Token IDs and timestamps enable tracking from creation through distribution to transfer. This provides complete lifecycle visibility. Complete lifecycle tracking ensures that all token activities are documented and traceable.

Understanding token IDs and timestamps helps you track tokens throughout their lifecycle, verify token information, ensure complete auditability, support compliance requirements, maintain transparency in token-based operations, and work effectively within the token tracking system.

# Controls and Accountability

Understand the controls and accountability measures in the platform

## Overview

Intain Markets implements comprehensive controls and accountability measures throughout the platform to ensure security, compliance, proper governance, and protection for all parties. These controls are built into the platform's architecture, working together to maintain integrity, enforce proper workflows, and ensure that transactions proceed correctly while protecting all participants. Understanding controls and accountability helps you appreciate how the platform ensures security, maintains compliance, enforces proper governance, and protects all parties throughout the transaction lifecycle.

## How the Platform Is Designed

The platform is designed with multiple layers of controls that work together to ensure security, compliance, and proper operation. These controls are not optional features—they are fundamental design elements that operate automatically to protect all parties and maintain platform integrity. These controls work at multiple levels to provide comprehensive protection.

**Access Controls** ensure that users can only see and do what's appropriate for their role:

- **Role-based permissions** determine what actions are available. Your role determines what you can see, what actions you can take, and what responsibilities you have. The platform automatically filters information and actions based on your role.
- **Authentication** ensures only authorized users can access the platform. Users must authenticate before accessing the platform, and authentication is required for all actions. This ensures that only authorized users can access the platform and take actions.

- **Session management** provides secure access with automatic expiration. Sessions expire after periods of inactivity, ensuring that access is controlled and that unauthorized access is prevented. This session management ensures that access is secure and controlled.
- **Visibility controls** ensure users only see items where they have appropriate roles or permissions. You can only see items where you have a role, where items are shared with you, or where you have appropriate permissions. This visibility control ensures that sensitive information is protected.

**Workflow Controls** ensure that transactions progress correctly:

- **Status-based controls** prevent actions that aren't allowed at the current stage. Statuses control what actions are available, ensuring that actions only happen when appropriate. This prevents errors and ensures proper workflow progression.
- **Sequential progression** ensures steps happen in proper order. You cannot skip steps or go backwards without proper authorization. This ensures that important steps aren't missed and that transactions progress in the correct order.
- **Dependency management** ensures prerequisites are met before actions are enabled. Actions are only enabled when prerequisites are met, ensuring that transactions progress correctly and that important steps aren't skipped.
- **Process integrity** prevents skipping important steps or improper progression. The platform enforces proper workflow progression, ensuring that transactions follow correct processes and that important steps aren't skipped.

**Data Controls** ensure data quality and accuracy:

- **Data validation** checks format and quality before acceptance. Data is validated before it's accepted, ensuring that only valid data is stored. This validation prevents errors and ensures data quality.
- **Business rules** are enforced automatically. Business rules are enforced by the platform, ensuring that transactions comply with business requirements. This enforcement ensures that business rules are followed consistently.
- **Format requirements** ensure consistency. Data must meet format requirements before acceptance, ensuring consistency and quality. This format enforcement ensures that data is consistent and properly formatted.

- **Error prevention** catches issues before they become problems. The platform validates data and checks requirements before accepting changes, preventing errors and ensuring quality. This error prevention helps maintain data quality and prevent issues.

**Audit Controls** ensure accountability and transparency:

- **All actions are tracked** with attribution and timestamps. Every action is recorded with who performed it, when it occurred, and what changed. This tracking ensures accountability and supports compliance.
- **Complete history** is maintained for all items. All changes are preserved in chronological order, creating complete historical records. This history ensures that all changes are traceable and attributable.
- **Status changes** are recorded with who changed them and when. Every status change is recorded with attribution and timestamp, ensuring that status changes are traceable and attributable.
- **Document changes** are tracked with version history. Previous versions of documents are saved when changes are made, maintaining complete document history. This version tracking ensures that document changes are traceable and attributable.

These controls work together automatically, ensuring that the platform operates securely and correctly while maintaining accountability and transparency. This automatic operation ensures that controls are consistently applied and that the platform operates securely and correctly.

## What This Enables for Users

**For All Users**, controls provide confidence that the platform operates securely, that workflows progress correctly, and that data quality is maintained. You can trust that the platform enforces proper processes and protects your information. This confidence enables you to use the platform effectively and trust that your data and transactions are secure.

**For Submitters**, controls ensure that your submissions are reviewed properly, that approvals happen in the correct sequence, and that your data is validated before acceptance. You can be confident that approved items have met quality and compliance standards. This confidence enables you to submit items knowing that they will be properly reviewed and validated.

**For Reviewers**, controls ensure that you review items at the appropriate stage, that you have proper authorization to make decisions, and that your decisions are documented and attributed. You can make decisions knowing that proper processes are followed. This confidence enables you to make decisions knowing that proper processes are followed and that your decisions are properly documented.

**For Compliance and Governance**, controls provide assurance that regulatory requirements are met, that business rules are enforced, and that complete audit trails are maintained. You can demonstrate that transactions followed proper processes. This assurance enables you to demonstrate compliance and proper governance.

**For Security**, controls protect sensitive information, ensure proper access, and maintain platform integrity. You can trust that your data and transactions are secure. This security enables you to use the platform confidently knowing that your data and transactions are protected.

The control structure enables secure, compliant, and accountable operation while maintaining usability and efficiency. This structure ensures that the platform operates securely and correctly while remaining usable and efficient.

## Key Principles to Understand

**Layered Protection** - Controls operate at multiple levels—access, workflow, data, and audit—providing comprehensive protection. These layers work together to ensure security and integrity. Understanding layered protection helps you appreciate how multiple controls work together to provide comprehensive protection.

**Automatic Enforcement** - Controls are enforced automatically by the platform. You don't need to remember to follow rules—the platform ensures proper operation automatically. Understanding automatic enforcement helps you appreciate how the platform simplifies compliance and ensures consistency.

**Role-Based Access** - Access is controlled by roles and permissions. You can only see and do what's appropriate for your role, ensuring proper separation of duties and security. Understanding role-based access helps you know what you can see and do, and what others can see and do.

**Workflow Integrity** - Workflow controls ensure that steps happen in proper order and that prerequisites are met. You cannot skip steps or proceed improperly—the platform enforces correct progression. Understanding workflow integrity helps you appreciate how the platform ensures proper workflow progression.

**Data Quality** - Data controls ensure that information is validated before acceptance, maintaining quality and consistency. Invalid or incomplete data is rejected, preventing errors. Understanding data quality helps you appreciate how the platform maintains data quality and prevents errors.

**Complete Accountability** - Audit controls ensure that all actions are tracked and attributed. You can see who did what and when, creating accountability for all activities. Understanding complete accountability helps you appreciate how the platform maintains accountability and supports compliance.

**Compliance Support** - Controls ensure that regulatory requirements and business rules are followed. The platform enforces compliance automatically, reducing the risk of violations. Understanding compliance support helps you appreciate how the platform supports compliance and reduces risk.

**Transparency** - While controls protect security, they also provide transparency through audit trails. Authorized parties can see what happened, when, and who was responsible. Understanding transparency helps you appreciate how the platform provides transparency while maintaining security.

**Protection for All Parties** - Controls protect all parties by ensuring proper processes, maintaining data quality, and enforcing security. Everyone benefits from the protection that controls provide. Understanding protection helps you appreciate how controls protect all parties.

**Permanent Records** - Audit controls create permanent records that cannot be deleted or modified. This ensures that accountability and compliance records remain accurate and available. Understanding permanent records helps you appreciate how the platform maintains accountability and compliance records.

Understanding controls and accountability helps you appreciate how the platform ensures security, maintains compliance, enforces proper governance, protects all parties, and provides complete transparency and accountability for all platform activities. This understanding enables you to use the platform confidently knowing that proper controls are in place and that accountability is maintained throughout the transaction lifecycle.

# Common User Questions

Answers to frequently asked questions about pools, loans, and platform usage

## Overview

This comprehensive guide answers common questions users have about pools, loans, and general platform usage. These FAQs help you quickly find answers to typical questions and understand how the platform works. Use this guide when you need quick answers to common questions about using the platform, troubleshooting issues, and understanding platform features.

## Frequently Asked Questions

### Pool Questions

#### **Q: Can I edit a pool after sharing it?**

A: Yes, you can usually edit pools while they're in Preview status. Once a pool reaches Deal status, editing is typically restricted. Check the pool status to see what editing options are available. Preview status allows editing while collaboration is ongoing, but Deal status restricts editing as pools are finalized.

#### **Q: How many loans can I add to a pool?**

A: There's no specific limit on the number of loans you can add to a pool. Add as many loans as needed for your transaction. The system will calculate pool metrics automatically from all mapped loans. Pool metrics update automatically as you add or remove loans.

#### **Q: What happens if I remove a loan from a pool?**

A: When you remove a loan from a pool, the loan is excluded from pool calculations. Pool metrics (total balance, loan count, weighted averages) update automatically. The loan remains visible in the pool but is marked as removed. You can reinstate it later if needed. Removed loans don't affect pool metrics but remain visible for tracking.

**Q: Can I share a pool with multiple organizations at once?**

A: Yes, you can share a pool with multiple organizations simultaneously. You don't need to share with one organization at a time. Sharing with multiple organizations enables collaboration with various parties at the same time.

**Q: What's the difference between Created and Preview status?**

A: Created status means the pool is visible only to you. Preview status means the pool has been shared with other organizations for review. Created pools are private, while Preview pools are visible to shared parties.

**Q: Can I unshare a pool?**

A: Sharing permissions depend on pool status and your role. Check sharing settings to see if you can modify sharing. Some statuses may restrict sharing changes. Review pool status and permissions to understand sharing options.

**Q: What happens when a market maker accepts a mandate?**

A: When a market maker accepts a mandate, the pool status changes to Deal. The pool is finalized, editing is restricted, and the market maker proceeds with deal structuring. The transaction is committed and moves toward completion.

## **Loan Questions**

**Q: Can a loan be in multiple pools?**

A: No, a loan can only belong to one pool at a time. To move a loan to another pool, you must first remove it (unmap it) from the current pool, then map it to the new pool. Loans can only participate in one pool at a time.

**Q: What's the difference between unmapped and mapped loans?**

A: Unmapped loans exist in the system but are not assigned to any pool. Mapped loans are assigned to a specific pool and are included in pool calculations. Unmapped loans are available for assignment, while mapped loans are actively participating in pools.

**Q: Can I delete a loan?**

A: You can usually delete unmapped loans that haven't been verified or used in transactions. Once a loan is verified, mapped to a pool, or used in transactions, deletion may be restricted. Check the loan status to see deletion options. Deletion restrictions protect data integrity.

**Q: What happens to pool metrics when I remove a loan?**

A: Pool metrics recalculate automatically when loans are removed. Total balance decreases, loan count decreases, and weighted averages recalculate to exclude the removed loan. Metrics update immediately to reflect the removal.

**Q: Can I reinstate a removed loan?**

A: Yes, you can reinstate removed loans. When reinstated, the loan is included in pool calculations again, and pool metrics update automatically. Reinstated loans fully participate in pool metrics and characteristics.

**Q: How do I update loan information?**

A: Loan information can usually be updated for unmapped loans or loans in certain statuses. Check loan status and permissions to see if editing is available. Some statuses may restrict editing to maintain data integrity.

**General Platform Questions****Q: How do I switch between roles?**

A: Log out and log back in with a different role. Each role has its own view and permissions. You select your role during login from a dropdown menu. Different roles provide different views and capabilities.

**Q: Why are some buttons disabled?**

A: Buttons are disabled for several reasons: wrong status for the action, missing required information, waiting for another party to act, action already completed, or no permission for your role. Hover over disabled buttons to see tooltips explaining why they're disabled. Understanding why buttons are disabled helps you know what's needed.

**Q: How do I know what actions are available to me?**

A: Enabled buttons show actions you can take. Disabled buttons show actions that aren't available (with reasons). Your role and the item's status determine what actions are available. Check button states and tooltips to understand available actions.

**Q: Can I see who changed an item's status?**

A: Yes, you can view status history on item details pages. Status history shows who changed the status and when, along with previous and new statuses. Complete change history is available for all items.

**Q: How do I track my submissions?**

A: You can track submissions by viewing their status. Status shows where items are in their workflow. You can also view status history to see all changes and actions. Status tracking helps you monitor submission progress.

**Q: What happens if my session expires?**

A: If your session expires, you'll need to log in again. The platform remembers your preferences and shows you relevant information for your role. Session expiration protects security while maintaining your preferences.

**Q: Can I download pool or loan data?**

A: Download capabilities depend on sharing permissions set by issuers. If you have download permissions, you can download data. Check with the issuer if you need download access. Download permissions control data access.

**Q: How do I provide feedback on pools?**

A: If sharing permissions allow feedback, you can provide feedback through the pool's feedback section. You can provide pool-level or loan-level feedback, and can mark it as a change request if modifications are needed. Feedback enables collaboration and improvement.

**Q: What's the difference between feedback and rejection?**

A: Feedback (change requests) allows you to request modifications - items can be edited and resubmitted. Rejection is final - rejected items cannot be resubmitted and must be replaced with new items. Understanding this difference helps you respond appropriately.

**Q: How long do approvals take?**

A: Approval times vary depending on reviewer workload and complexity. You'll receive notifications when decisions are made. Check with reviewers if you have concerns about timing. Approval timing depends on various factors.

**Q: Can I cancel a submission?**

A: Cancellation depends on item status and workflow stage. Some items can be cancelled before review, while others cannot be cancelled once submitted. Check item status and workflow rules to see if cancellation is possible.

**Q: How do I find items I've created or am involved with?**

A: Use filters and search functions to find items. Filter by status, date, or other criteria. Your dashboard shows items relevant to your role. Search and filter capabilities help you locate items quickly.

Understanding common user questions helps you quickly find answers, understand platform features, troubleshoot common issues, use the platform effectively, and work efficiently within the platform's capabilities.

# Funding and Approval Questions

Answers to frequently asked questions about credit facilities, funding, and approvals

## Overview

This comprehensive guide answers common questions about credit facilities, funding requests, approvals, and the funding process. These FAQs help you understand the funding workflow and know what to expect at each stage. Use this guide when you have questions about credit facility processes, funding operations, and approval workflows.

## Frequently Asked Questions

### Term Sheet Questions

#### **Q: How long does term sheet review take?**

A: Review time varies depending on facility agent workload and term sheet complexity. Typically, reviews take a few days. You'll receive notifications when status changes. Check with the facility agent if you have concerns about timing. Review timing depends on various factors including complexity and reviewer availability.

#### **Q: What happens if my term sheet is rejected?**

A: If your term sheet is rejected, it enters a final state. No master commitment is created, and the facility does not proceed. You receive a rejection reason. You can create a new term sheet addressing the issues that led to rejection. Rejection is final and requires creating a new term sheet.

#### **Q: Do I need to re-sign if changes are requested?**

A: Usually yes. When changes are requested, you typically need to re-sign the term sheet after making changes. The system will indicate if re-signing is required. Complete electronic signature again after making requested modifications. Re-signing ensures that changes are properly authorized.

**Q: Can I edit a term sheet after submitting it?**

A: No, once submitted, you cannot edit term sheets while they're under review. If changes are requested, you can edit and resubmit. Otherwise, you must wait for the facility agent's decision. Editing restrictions maintain workflow integrity during review.

**Q: What happens after my term sheet is approved?**

A: When your term sheet is approved, a master commitment is automatically created. The facility agent configures the complete facility structure, then submits it for lender approval. Once lenders approve, the facility becomes active, and you can create funding requests. Approval triggers the facility setup process.

**Q: Can I withdraw a term sheet after submitting it?**

A: Withdrawal depends on term sheet status and workflow stage. Once under review, withdrawal may not be possible. Check term sheet status and workflow rules to see if withdrawal is available. Some statuses may allow withdrawal while others do not.

## **Master Commitment Questions**

**Q: Why was a master commitment created automatically?**

A: Master commitments are automatically created when term sheets are approved. The system creates them with information from your approved term sheet, then the facility agent configures the complete facility structure. Auto-creation ensures consistency and efficiency.

**Q: How long does lender approval take?**

A: Lender approval time varies depending on lender workload and facility complexity. Any lender approval activates the facility - you don't need all lenders to approve. You'll be notified when the facility becomes active. Approval timing depends on lender processes.

**Q: Can I see which lenders have approved?**

A: Yes, you can typically see lender approval status. Each lender's approval status is tracked individually, showing who has approved and when. This information is visible on the master commitment details page. Lender approval tracking provides transparency.

**Q: Can I create funding requests before the facility is active?**

A: No, you can only create funding requests against active facilities. Facilities must be approved by at least one lender and in Active status before you can create funding requests. Active status is required for funding request creation.

**Q: What happens if all lenders reject the master commitment?**

A: If all lenders reject (which is rare), the facility does not become active. The facility agent may reconfigure the master commitment and resubmit, or the process may stop. Check with the facility agent about next steps. Lender rejection prevents facility activation.

**Q: Can I see facility setup progress?**

A: Yes, you can see facility setup status on the master commitment details page. Setup status shows whether configuration is complete or still in progress. This helps you know when the facility will be ready for lender approval.

## **Funding Request Questions**

**Q: How much can I request in a funding request?**

A: You can request up to your available borrowing capacity. The system shows available capacity, and you cannot request more than what's available. Available capacity is calculated based on facility rules and current utilization. Capacity limits ensure compliance with facility terms.

**Q: Can I create multiple funding requests?**

A: Yes, you can create multiple funding requests as long as you don't exceed total facility limits. Each request goes through the review process individually. You can have only one draft request per facility at a time. Multiple requests enable flexible drawdown management.

**Q: What happens if my funding request is rejected?**

A: If your funding request is rejected, no funding notice is created, and the drawdown doesn't proceed. You receive a rejection reason. You can create a new funding request addressing the issues that led to rejection. Rejection is final and requires creating a new request.

**Q: Can I edit a funding request after submitting it?**

A: No, once submitted, you cannot edit funding requests while they're under review. If changes are requested, you can edit and resubmit. Otherwise, you must wait for the facility agent's decision. Editing restrictions maintain workflow integrity during review.

**Q: How long does funding request review take?**

A: Review time varies depending on facility agent workload and request complexity. Typically, reviews take a few days. You'll receive notifications when decisions are made. Review timing depends on various factors.

**Q: Can I cancel a funding request?**

A: Cancellation depends on funding request status. Draft requests can usually be cancelled, but submitted requests may not be cancellable. Check funding request status and workflow rules to see if cancellation is available.

## Funding Notice Questions

### **Q: Why do I need to approve token transfer?**

A: Borrower token approval makes the funding notice visible to lenders. Until you approve, lenders cannot see the funding notice. Approval authorizes the token transfer and enables lender review. Token approval is required for lender visibility.

### **Q: What are tokens?**

A: Tokens represent drawdown amounts digitally. They enable tracking and distribution to lenders. Tokens are allocated to lenders based on their participation percentages in the facility. They facilitate the fund transfer process. Tokens provide digital representation of drawdown amounts.

### **Q: When are tokens generated?**

A: Tokens are generated by facility agents after funding requests are approved. Facility agents generate tokens and configure distribution to lenders. After tokens are generated, you can approve the token transfer. Token generation occurs after funding request approval.

### **Q: Can I see which lenders have approved drawdowns?**

A: Yes, you can see which lenders have approved or rejected drawdowns. Each lender's decision is tracked individually, showing approval or rejection status. This information is visible on the funding notice details page. Lender decision tracking provides transparency.

### **Q: How long does it take for funds to be transferred?**

A: Fund transfer timing depends on lender processes. After lenders approve drawdowns, they transfer funds and confirm transfers. Transfer timing varies by lender. You'll receive funds as lenders confirm transfers. Transfer timing depends on lender processes.

### **Q: What happens if a lender rejects a drawdown?**

A: If a lender rejects a drawdown, that lender's portion doesn't proceed. Other lenders can still approve their portions. The facility agent manages the drawdown process and coordinates with lenders. Lender rejection affects only that lender's portion.

**Q: Can I see token distribution details?**

A: Yes, you can see token distribution details on the funding notice details page. Distribution shows how tokens are allocated to lenders, including amounts and percentages. Token distribution information provides complete transparency.

Understanding funding and approval questions helps you navigate the credit facility workflow effectively, know what to expect at each stage, understand approval processes, and work efficiently within the funding system.

# Why Actions Are Blocked

Understand common reasons actions are blocked and how to resolve them

## Overview

Understanding why actions are blocked helps you know what needs to happen before you can proceed. This comprehensive guide explains common reasons actions are blocked and how to resolve them, helping you work effectively within workflow requirements. Actions are blocked when certain conditions aren't met, and understanding these conditions helps you resolve blocking issues efficiently.

## Frequently Asked Questions

### **Q: Why is my action button disabled?**

A: Action buttons are disabled when the item isn't in the right status, required information is missing, you're waiting for another party to act, you don't have permission for your role, or the action was already completed. Hover over disabled buttons to see tooltips explaining why they're disabled. Understanding why buttons are disabled helps you know what's needed to enable them.

### **Q: What does "wrong status" mean?**

A: Wrong status means the item isn't in the correct status for this action. Workflow doesn't permit the action at the current status, and you must progress through statuses in order. You cannot skip workflow steps, and status progression is required before the action becomes available. Understanding status requirements helps you know when actions will be available.

### **Q: What information might be missing?**

A: Missing information could include required fields that aren't filled, documents that aren't uploaded, incomplete information, missing prerequisites, or required data that hasn't been provided. Check the item details to see what's required. Completing all required information enables actions.

**Q: Why am I waiting for others?**

A: You're waiting for others when another party needs to act first, a previous step hasn't been completed, a dependency isn't satisfied, you're waiting for action from another role, or the workflow is blocked by another party. Check the item status to see what's pending. Understanding dependencies helps you know what's needed.

**Q: How do I check if I have permission?**

A: Verify you're logged in with the correct role, check if your role has permission for this action, ensure you're assigned to this item, verify you have access to this item, and confirm your role allows this action. Different roles have different permissions. Understanding role permissions helps you know what actions are available.

**Q: What if the action was already completed?**

A: If the action was already completed, you cannot repeat it. The item may already be in a final state, the process may be complete for this action, or the action cannot be repeated. Check the item status to see if the action was already taken. Understanding completed actions helps you know what's already done.

**Q: How do I resolve blocking issues?**

A: Check the item status and ensure it allows the action, complete all required information and upload required documents, wait for other parties if needed, verify your role has permission, and review requirements to ensure everything is complete. The platform typically provides guidance on what's needed. Following these steps helps resolve blocking issues.

**Q: Can I see why an action is blocked?**

A: Yes, hover over disabled buttons to see tooltips explaining why they're disabled. Check status messages nearby, look for error or warning messages, review the item status badge, and check requirements sections for guidance. Understanding blocking reasons helps you resolve issues.

**Q: What if I've completed everything but actions are still blocked?**

A: Double-check all requirements are met, verify item status is correct, ensure you're using the correct role, check if other parties need to act first, and review workflow requirements. If issues persist, check with support or the item owner. Thorough checking helps identify remaining issues.

**Q: Can actions be blocked temporarily?**

A: Yes, actions can be blocked temporarily while waiting for other parties, during processing, or while validations occur. Check item status and wait for processes to complete. Temporary blocks resolve when conditions are met.

**Q: How do I know when actions become available?**

A: Monitor item status changes, check for notifications, review status history, and watch for status updates. Actions become available when conditions are met and statuses progress. Status monitoring helps you know when actions become available.

Understanding why actions are blocked helps you know what needs to happen before you can proceed, resolve blocking issues effectively, work within workflow requirements, take appropriate actions when they become available, and work efficiently within the platform's workflow system.

# Why Can't I Act

Troubleshooting guide for when actions are unavailable

## Overview

This comprehensive troubleshooting guide helps you understand why you can't take certain actions and how to resolve common issues preventing you from acting. Use this guide when actions are disabled or unavailable to diagnose and resolve problems. Follow the diagnostic steps to identify and resolve issues systematically and efficiently.

## Frequently Asked Questions

### **Q: How do I diagnose why I can't act?**

A: Check the button or action by hovering over disabled buttons to see tooltips, check status messages nearby, look for error or warning messages, review item status badges, and check requirements sections. Verify your role is correct, check if your role has permission, ensure you're assigned to the item, verify you have access, and confirm your role allows the action. Check the item status to ensure it allows the action, verify status is correct for workflow stage, and review status history if needed. Verify all required fields are filled, check if required documents are uploaded, ensure prerequisites are met, verify information is complete, and check validation messages. Systematic diagnosis helps identify issues.

### **Q: Why can't I submit my term sheet?**

A: Possible causes include term sheet not being signed, electronic signature not completed, required fields not filled, required documents not uploaded, or validation errors present. Solutions include completing electronic signature, filling all required fields, uploading all required documents, fixing any validation errors, and ensuring the term sheet is complete. Completing all requirements enables submission.

### **Q: Why can't I create a funding request?**

A: Possible causes include master commitment not being active, facility not being operational, no available borrowing capacity, you don't have access to the facility, or facility status doesn't allow requests. Solutions include waiting for facility to become active, checking facility status, verifying available borrowing capacity, ensuring you have access to the facility, and confirming facility status allows requests. Active facility status is required for funding request creation.

**Q: Why can't I approve a term sheet or funding request?**

A: Possible causes include item not being in review status, you're not the authorized reviewer, item is already approved or rejected, or you don't have permission for your role. Solutions include checking item status, verifying you're the authorized reviewer, ensuring item is in correct status for approval, and confirming your role has approval authority. Correct status and role are required for approval.

**Q: Why can't I edit an item?**

A: Possible causes include item not being in editable status, item is under review, item has been approved or rejected, or you don't have permission to edit. Solutions include checking item status, ensuring item is in Draft or CHANGES\_REQUESTED status, verifying you have edit permission, and confirming status allows editing. Editable status is required for editing.

**Q: Why can't I see an item?**

A: Possible causes include item not being shared with you, you don't have a role in the item, item is in a status that restricts visibility, or you're using the wrong role. Solutions include checking if item is shared with your organization, verifying you have a role in the item, ensuring you're using the correct role, and checking item status for visibility restrictions. Proper sharing and role are required for visibility.

**Q: Why can't I sign a document?**

A: Possible causes include document not being ready for signing, you're not the authorized signer, signing process hasn't been initiated, or technical issues preventing signing. Solutions include checking document status, verifying you're the authorized signer, ensuring signing process has been initiated, and checking for technical issues. Proper authorization and process initiation are required for signing.

**Q: Why can't I view funding notice details?**

A: Possible causes include funding notice not being visible to your role, funding notice status restricts visibility, you don't have access permissions, or you're using the wrong role. Solutions include checking funding notice status, verifying your role has access, ensuring proper permissions, and confirming you're using the correct role. Proper access and permissions are required for viewing.

**Q: What should I do if I still can't act after checking everything?**

A: Review all diagnostic steps again to ensure nothing was missed. Check for any error messages or notifications that might provide additional information. Contact support or the item owner if you believe there's an issue. Verify your understanding of workflow requirements and role permissions. Be patient if you're waiting for other parties to act. Thorough review helps identify remaining issues.

**Q: How do I get help if I can't resolve the issue?**

A: Check platform help documentation, contact support with specific details about the issue, reach out to the item owner or administrator, review workflow documentation, and check for known issues or updates. Getting help ensures issues are resolved efficiently.

**Q: Can I see what actions are available for my role?**

A: Yes, enabled buttons show available actions, disabled buttons show unavailable actions with reasons, role documentation explains permissions, and status indicators show what's possible. Understanding available actions helps you know what you can do.

**Q: How do I know if I'm waiting for someone else?**

A: Check item status to see if it's waiting for another party, review status messages indicating pending actions, check workflow requirements for dependencies, and look for notifications about pending actions. Understanding dependencies helps you know what's needed.

Understanding why you can't act helps you diagnose issues effectively, resolve problems preventing actions, work within workflow requirements, take appropriate actions when they become available, and work efficiently within the platform's workflow and permission system.

# New Features

Learn about new features and capabilities added to the platform

## Overview

This document tracks new features and capabilities added to the Intain Markets platform. Check here regularly to learn about new functionality, improvements, and enhancements that can help you work more effectively. New features are documented when released, with release notes explaining new capabilities and how to use them. Understanding new features helps you take advantage of platform improvements and work more efficiently.

## What Changed

**Credit Facility Module Enhancements** - Recent enhancements to credit facilities include automatic master commitment creation when term sheets are approved, streamlining the facility setup process. Per-lender e-signature tracking allows facility agents to sign funding notices for each lender individually, with each lender's signature status tracked separately. Enhanced token generation and distribution capabilities enable better tracking and management of drawdowns. Individual lender approval tracking allows each lender's approval status to be tracked individually, enabling flexible lender participation. Enhanced status workflows provide better visibility and control throughout the facility lifecycle. These enhancements improve facility management and drawdown processes.

**Enhanced Status Tracking** - Improvements to status tracking include comprehensive status history showing all changes with who changed what and when. Detailed action tracking records all actions with complete details, providing full visibility. Complete audit trails ensure complete accountability and compliance. Status qualifiers provide additional context about item states. Enhanced visibility improves understanding of status changes and workflow progression. These improvements provide better transparency and accountability.

**Improved E-Signature Integration** - E-signature improvements include full support for electronic signatures across all document types. Per-lender signing allows facility agents to sign funding notices separately for each lender. Enhanced signature tracking provides better tracking of signature completion and status. Better signature visibility improves understanding of who has signed and when. Improved workflow integration enhances signature processes throughout the platform. These improvements streamline signature workflows and improve tracking.

**User Interface Improvements** - Interface enhancements include better navigation and organization, improved visual design and clarity, enhanced search and filter capabilities, better mobile responsiveness, and improved accessibility features. These improvements make the platform easier to use and more efficient.

**Reporting and Analytics Enhancements** - Reporting improvements include new report types and formats, enhanced data visualization, better export capabilities, improved analytics and insights, and more comprehensive reporting options. These enhancements provide better visibility into platform activities and performance.

## Impact on Existing Users

**For Borrowers** - You benefit from streamlined facility setup with automatic master commitment creation. Enhanced status tracking provides better visibility into facility progress. Improved e-signature processes make signing easier and more transparent. New features may require learning new workflows, but documentation and training are available to help you adapt. These improvements make the borrowing process more efficient and transparent.

**For Facility Agents** - You gain enhanced capabilities for managing facilities with per-lender e-signature tracking and individual lender approval tracking. Improved status workflows provide better control and visibility. Enhanced token generation and distribution capabilities improve drawdown management. You may need to learn new features, but they improve your ability to manage facilities effectively. These enhancements provide better tools for facility management.

**For Lenders** - You benefit from improved visibility into facility status and individual approval tracking. Enhanced e-signature processes provide better tracking of your participation. Better status visibility helps you understand where facilities are in the workflow. New features improve your ability to participate in facilities effectively. These improvements enhance lender experience and participation.

**For All Users** - New features generally improve platform functionality and user experience. You may need to adapt to new workflows, but improvements typically make processes easier and more efficient. Documentation is updated to include new features, and training may be available for significant new capabilities. Staying current with new features helps you use the platform most effectively. These improvements benefit all users by making the platform more capable and easier to use.

**Learning and Adaptation** - New features may require learning new methods, but documentation and training are available. Release notes explain new features and how to use them. Support can help you understand and use new features. Adapting to new features helps you work more efficiently. Staying current with platform evolution ensures you can use all available capabilities.

## How to Stay Informed

**Release Notes** - Check release notes regularly for information about new features. Release notes explain what's new and how to use new features. They provide details about improvements and enhancements. Regular review helps you stay current with platform evolution.

**Documentation Updates** - Documentation is updated when new features are released. Check documentation regularly for new information. Updated documentation explains new features and how to use them. Documentation reflects current platform capabilities.

**Training and Support** - Training may be available for significant new features. Support can help you understand and use new features. Contact support if you need help with new features. Training and support help you adapt to new capabilities.

**Platform Notifications** - Platform notifications may alert you to new features. Check notifications regularly for updates. Notifications help you stay informed about platform changes. Staying informed helps you take advantage of new features.

Understanding new features helps you take advantage of platform improvements, use new capabilities effectively, stay current with platform evolution, work more efficiently with enhanced functionality, and maximize your use of platform capabilities.

# Status or Logic Changes

Learn about changes to status workflows and business logic

## Overview

This document tracks changes to status workflows, business logic, and process flows. Understanding these changes helps you adapt to platform updates, know what to expect, and use updated workflows effectively. Changes are documented when implemented, with release notes explaining what changed and why. Understanding these changes helps you adapt effectively and work efficiently with updated processes.

## What Changed

**Status Workflow Changes** - Status workflows may change in several ways. New status values may be added, or existing ones may be modified or removed. How items move between statuses may change, with new transitions added or existing ones modified. The overall flow of statuses may be updated to improve workflows. What each status means may be clarified or updated. Rules governing status changes may be updated to improve workflow integrity. These changes improve workflow efficiency and clarity.

**Business Logic Changes** - Business logic changes may affect approval processes, with how approvals work changing and new requirements or modified processes introduced. Data validation rules may be updated or new validations added. How calculations are performed may be updated or improved. Steps in workflows may be added, removed, or modified. Business rules governing operations may be updated to improve processes. These changes improve process accuracy and efficiency.

**Process Flow Updates** - Process flows may be updated to improve efficiency and user experience. New steps may be added to workflows, or existing steps may be modified. Workflow sequences may change to better support business processes. Process improvements may streamline operations and reduce complexity. These updates improve overall process effectiveness.

**Validation Rule Changes** - Validation rules may be updated to improve data quality. New validations may be added to catch errors earlier. Existing validations may be modified to be more or less strict. Validation messages may be improved for clarity. These changes help ensure data quality and process integrity.

**Calculation Updates** - Calculation methods may be updated to improve accuracy. New calculations may be added to provide better insights. Existing calculations may be refined or corrected. Calculation results may be displayed differently. These updates improve calculation accuracy and usefulness.

## Impact on Existing Users

**Workflow Adaptation** - You may need to adapt to new workflows or processes. Status workflows may change, affecting how items progress. Process improvements may require learning new methods. New requirements may be introduced, or existing ones may be modified. Understanding changes helps you adapt effectively. Adaptation ensures you can use updated processes correctly.

**Learning New Methods** - You may need to learn new ways of doing things. Documentation is updated to reflect changes, and training may be available for significant changes. Release notes explain what changed and why, helping you understand new methods. Support is available to help you adapt to changes. Learning new methods helps you work effectively with updated processes.

**Improved Functionality** - Changes often improve functionality and user experience. Process improvements may make workflows more efficient. Better business logic may reduce errors and improve outcomes. Enhanced workflows may provide better visibility and control. Overall, changes typically improve platform effectiveness. These improvements benefit users by making processes better.

**Migration Support** - When significant changes occur, migration support may be provided. Migration guides explain how to transition to new methods. Support can help you adapt to changes. Documentation reflects current methods and workflows. Training may be available for significant changes. Migration support helps ensure smooth transitions.

**Staying Current** - Understanding changes helps you stay current with platform evolution. Reviewing what changed and why helps you adapt effectively. Learning new requirements ensures you can use the platform correctly. Adapting to improvements helps you work more efficiently. Staying informed about changes helps you use the platform most effectively. Staying current ensures you can use all platform capabilities.

**Potential Disruptions** - Some changes may temporarily disrupt workflows while you adapt. Understanding changes helps minimize disruptions. Support is available to help you adapt quickly. Documentation provides guidance for adapting to changes. Temporary disruptions are typically outweighed by long-term improvements.

## How to Adapt

**Review Release Notes** - Review release notes to understand what changed. Release notes explain changes and their impact. They provide guidance on adapting to changes. Regular review helps you stay current with updates.

**Update Your Processes** - Update your processes to reflect changes. Learn new methods and workflows. Adapt your approach to use updated features. Update your understanding of platform capabilities. Process updates ensure you can work effectively.

**Seek Support** - Contact support if you need help adapting to changes. Support can explain changes and help you adapt. Training may be available for significant changes. Support helps ensure smooth adaptation.

**Review Documentation** - Review updated documentation to understand changes. Documentation reflects current methods and workflows. Updated documentation explains new processes. Regular review helps you stay current.

Understanding status or logic changes helps you adapt to platform updates, know what to expect from changes, use updated workflows effectively, work efficiently with improved processes, and maintain productivity during platform evolution.

# Retired Flows

Learn about workflows and features that have been retired or deprecated

## Overview

This document tracks workflows, processes, and features that have been retired or deprecated. Understanding retired flows helps you know what's no longer available, what replaced old workflows, and how to use current features effectively. Retired features are no longer available in the platform and have typically been replaced by improved processes. Understanding retired flows helps you avoid using outdated methods and focus on current capabilities.

## What Changed

**Retired Workflows** - Old ways of doing things that are no longer supported have been removed. Processes that have been replaced by improved alternatives are no longer available. Features that have been removed from the platform cannot be used. Deprecated functionality that will be removed should no longer be used. Previous methods that have been replaced should be avoided. These retirements improve platform consistency and efficiency.

**Replacement Features** - Retired flows are typically replaced by better methods that provide improved functionality or user experience. New processes have been developed to replace old ones. Better alternatives are available that serve the same purpose. Platform evolution has introduced new features that replace retired ones. Current documentation reflects current methods, not retired ones. Replacement features provide better capabilities than retired ones.

**Migration Paths** - When flows are retired, alternatives are typically provided. Release notes explain what replaced retired features. Documentation shows current methods and workflows. Migration guides explain how to transition to new methods. Support can guide you to current alternatives. Migration paths help ensure smooth transitions from old to new methods.

**Deprecated Features** - Some features may be marked as deprecated before retirement. Deprecated features will be removed in future releases. You should avoid using deprecated features and migrate to current alternatives. Documentation indicates which features are deprecated. Migration to current features is recommended before retirement.

**Removed Capabilities** - Some capabilities may be removed without direct replacements if they're no longer needed. Removed capabilities cannot be used. Alternative approaches may be available for similar needs. Understanding removals helps you adapt your approach. Support can help identify alternatives if needed.

## Impact on Existing Users

**No Longer Available** - Retired features are no longer available in the platform. You cannot use old workflows or processes that have been retired. Buttons or options for retired features have been removed. Features marked as deprecated should not be used. You must use current features instead. Understanding what's no longer available helps you focus on current capabilities.

**Migration Required** - You may need to migrate from old methods to new ones. Migration guides explain how to transition to new methods. Support can help you adapt to current features. Documentation reflects current methods, not retired ones. Training may be available to help you learn new methods. Migration ensures you can continue working effectively.

**Using Current Features** - Focus on using current features that replace retired ones. Current documentation shows how to use current methods. New features often provide better functionality than retired ones. Learning current methods helps you work effectively. Support can guide you to current alternatives. Using current features ensures you can work efficiently.

**Identifying Retired Flows** - You can identify retired flows when features are no longer available, buttons or options are removed, documentation indicates features are deprecated, release notes mention retirement, or support confirms features are retired. If you're trying to use something that doesn't exist, it may have been retired. Understanding how to identify retired flows helps you avoid using outdated methods.

**Finding Alternatives** - When flows are retired, check release notes for what replaced them. Review documentation for current methods and workflows. Contact support for guidance to current alternatives. Check migration guides for transition instructions. Look for new features that replace retired ones. Finding alternatives ensures you can continue working effectively.

**Learning Current Methods** - Learn current methods that replace retired ones. Current documentation explains how to use current features. Training may be available for new methods. Support can help you learn current approaches. Learning current methods ensures you can work effectively.

**Avoiding Deprecated Features** - Avoid using deprecated features that will be retired. Migrate to current alternatives before retirement. Check documentation for deprecation notices. Use current features instead of deprecated ones. Avoiding deprecated features prevents future disruptions.

## How to Stay Current

**Review Release Notes** - Review release notes to learn about retirements. Release notes explain what was retired and what replaced it. They provide migration guidance. Regular review helps you stay current with platform evolution.

**Check Documentation** - Check documentation for current methods. Documentation reflects current capabilities, not retired ones. Updated documentation shows how to use current features. Regular review helps you stay current.

**Contact Support** - Contact support if you're unsure about retirements. Support can explain what was retired and what replaced it. Support can guide you to current alternatives. Support helps ensure you use current methods.

**Attend Training** - Attend training if available for new methods. Training helps you learn current approaches. Training ensures you can use current features effectively. Training helps you adapt to platform evolution.

Understanding retired flows helps you use current platform features effectively, avoid trying to use features that no longer exist, know what replaced old workflows, migrate to current methods, work efficiently with available features, and stay current with platform evolution.
